THE INDEX WHICH APPEARS ON THESE PAGES HAS A VALUE BEYOND ITS ORDINARY PURPOSE AS A GUIDE TO THE CONTENTS OF VOLUME 7. CONSIDERING THAT THE ABOVE LIST OF SUBJECTS COVERS A PERIOD OF ONLY SIX MONTHS—HALF A YEAR—COSTING THE SUBSCRIBER FIFTY CENTS. IT IS, WE THINK, A STRONG PRESENTATION OF THE VALUE WHICH HORTICULTURE IS RETURNING TO ITS SUBSCRIBERS. CAN YOU DO BETTER THAN TELL YOUR FRIENDS ABOUT IT?

S. S. PENNOCK-MEEHAN COMPANY, "THE" Wholesale Florists of
1608-1620 Ludlow Street, PHILADELPHIA

WINSOR and WHITE ENCHANTRESS Strong Rooted Cuttings Now Ready For Delivery

WINSOR has proved to be the finest carnation in the light pink class. We sold a large quantity of it last year, but there will be a much larger sale for it this year. At the English Carnation Show held in December, it was the winner in the light pink class. It is doing well everywhere and will supplant everything in that color.

WHITE ENCHANTRESS will occupy the same position among white carnations that Enchantress does among flesh pinks. It has all the good qualities of the common Enchantress,—long stem, earliness, large size, freedom, etc. In our opinion, it is by far the best white carnation ever introduced.

We have a splendid stock of both Winsor and White Enchantress ready for immediate delivery, and will guarantee perfect satisfaction with the cuttings supplied. Do not wait, because the demand for these varieties is bound to be enormous. Order early, while we can promise immediate delivery, and secure gilt-edged stock. We have a large stock of both of these varieties, and all our cuttings are heel cuttings, taken from flowering stems. On account of the quantity that we are growing, we are not obliged to over-propagate, and our stock is in the most perfect and healthy condition.

Strong rooted cuttings from sand, \$6 per 100, \$50 per 1000. Extra strong transplanted cuttings from soil, \$7.50 per 100, \$60 per 1000. Strong established pot-grown plants \$9 per 100, \$75 per 1000.

F. R. PIERSON CO., - Tarrytown-on-Hudson, - NEW YORK

A New Disease of the Peony

To the amateur horticulturist, that is, one who grows plants for pleasure rather than for money, the peony has been, and probably always will be, a great favorite. The dark green foliage throughout a long growing season, the large flowers, the endless number of varieties, its comparative freedom from disease and the small number of insects which trouble it, have all contributed more or less to its deserved popularity. Hence it is that peony-lovers in and about Cambridge, Mass., have viewed with dismay the destruction of many of their favorite plants the past season by a new disease.

Among the first symptoms of the disease are wilting of the leaves and loss of green color in the stalks. On digging away the earth the roots are found more or less decayed. In a majority of cases, though not always, the disease is fatal. Specimens of the diseased plants have been sent to the experiment stations, but so far no satisfactory conclusions have been reached. Probably some bacterium or fungus is the cause of all the trouble, but the particular species has not yet been determined, nor is it known whether infection takes place above or below the ground.

If it should be proved that the disease is spread by spores that are blown about by the wind and germinate on reaching the leaf, the remedy may be simple, for spraying with Bordeaux mixture or other fungicide would undoubtedly be sufficient to protect the plants from future attacks. But it appears more likely that infection takes place in the soil and that the root is the first part of the plant to undergo destruction. In this case to insure the immunity of the plant will not be so easy.

If the cause of the trouble is a species which is usually parasitic and lives in the soil, the grower of peonies has some reason for being alarmed as the control of such species is difficult. They are seldom kept from doing harm except by rotation of crops as the case of onion smut, club-foot of cabbage and potato scab. Yet it may be that the peony disease is only a saprophytic form (that ordinarily lives on decaying matter only) which has become under favorable conditions temporarily a parasite. If such is the case an amelioration of the soil by applications of lime, sand, or other material may be sufficient to prevent further ravages.

Prof. M. L. Fernald of the Botanic Garden, Cambridge, who has made an extended study of the geographical distribution of plants as affected by their physical environment, says that many members of the Ranunculaceæ (Buttercup Family) to which the peony belongs, delight in a limestone soil. So far as known the peony disease has appeared only in clayey soils

where there is, presumably, only a small amount of lime. And it may be that the peony having been transported from its natural environment has become so weakened that the saprophytic organisms have been able to attack the last plant before natural decay of the roots has begun.

In the meantime, while we await the decisions of the plant pathologists who are studying the disease, we advise the peony-grower who wishes to save his plants to begin spraying all parts of the plant above the soil as soon as the leaves appear in the spring. This will prevent any infection by spores blown about by the wind. To retard any further spread of disease in the soil, lime should be broadcasted at the rate of fifty to seventy-five bushels per acre and spaded in thoroughly as soon as the ground can be worked. These preventives may not prove to be an unqualified success, but they are the best known at present.

E. W. MORSE.

Celastrus orbiculatus Thun.

Even now this Asiatic cousin of our own Bitter Sweet or Roxbury Wax Work is showy with its wealth of crimson seeds. Although introduced into this country more than thirty years ago it is by no means as commonly planted as it deserves. A twining shrub, native to China and Japan, it attains a height of ten to fifteen feet and in habit closely resembles the Wax Work though it is a more vigorous plant and a more rapid grower. The leaves are usually two to three inches long, dark yellow-green on the upper surface and turn to yellow before falling in the autumn. The flowers are small, yellow-green, borne in axillary clusters and are of little ornamental value. The fruit is very abundant and ripens in early autumn. It is globose and about one-quarter inch in diameter. The pod is a clear yellow and the aril of the seed crimson. The fruit is smaller than that of the Roxbury Wax Work and is less showy until the leaves have fallen because the fruit stalks do not lift it above the leaves. Then the aril is lighter in color and somewhat less striking than that of the Wax Work. However, the greater abundance of fruit more than compensates for these deficiencies. As to persistence, the pod usually remains until late fall or early winter, while the seed with its crimson aril not infrequently remains until late winter. It is not particular as to soil or situation and it grows in the shade as well as in the sun. It is especially good for covering rocks and for twining over walls and fences. Then it is well adapted to house-decoration, a purpose for which it is made to serve by the Japanese.

Celastrus orbiculatus is figured and described in "Garden and Forest", vol. III, pp. 550-551.

which all should strive and every forward step in this direction will hasten the realization of

A Happy New Year.

The scope
of school horticulture

We read of one teacher in a school where gardening has been taught who finds fault with some of the boys who prefer

growing vegetables to flowers and advocates compulsory flower culture on the ground that the growing of vegetables fosters the mercenary spirit, whereas the object should be to teach the children how to appreciate the beauties of nature. As we understand it the primary object in school horticulture is to educate the children away from the idea that the city is the only place for those who seek a road that leads on to fortune, to develop in them an appreciation of the comforts and the opportunities that a country life offers, to expand their minds on healthy lines, to cultivate the heart, brain and hands and to build up character as it can only be built up by association with nature. As with all other movements of a philanthropic sort there is danger of theorists and extremists nullifying much well-meant effort in this school-garden movement. The school teacher who objects to the boys' vegetable gardens should be passed on to another job.

What we
promise

It is our purpose to make the coming volume of HORTICULTURE better than any of its predecessors in every possible respect. This means that it will be still more emphatically the foremost horticultural journal of America. As heretofore its policy will be to serve the interests of and promote the fraternal spirit among those engaged in horticulture out of doors or under glass and the allied industries by securing for its reading columns the experience and views of the most intelligent, progressive and successful plantmen, florists and gardeners on practical subjects and presenting weekly full reports of the doings of all local and national organizations devoted to horticultural advancement and education. Its influence and support will be extended to every movement tending to elevate and dignify American horticulture. All news of value to the trade from every section of our country and abroad, market and crop reports and forecasts, current prices, etc., will be carefully compiled for our weekly issues. Editorials on reasonable topics and signed contributions from the foremost horticultural writers and educators on matters of scientific and artistic interest will fill a prominent place. On our staff of writers for the coming year are included Jackson Dawson, Daniel A. Clarke, J. A. Pettigrew, Theodore Wirth, A. Hans, T. D. Hatfield and other eminent authorities on tree and landscape topics, Edwin Lonsdale, Robert Craig, Robert Cameron, D. McIntosh, Kenneth Finlayson, George Moore—all plantmen of high repute, E. O. Orpet, James Hutchinson and John E. Lager on orchids, J. E. Simpson on roses, Wm. Sim on violets, F. J. Rem on herbaceous plants, Edw. McKendry on chrysanthemums, Wilfrid Wheeler on small fruits, Dr. George E. Stone on vegetables under glass, R. L. Adams on plant diseases, Dudley M. Pray on fertilizers, and many other eminent writers on special subjects, George C. Watson and our rapidly growing staff of local correspondents, and the foreign field will be covered by W. H. Adsett, Harry H. Thomas, C. Harman Payne, Edgar Elvin, F. Gomer Waterer and other interesting contributors from time to time. We intend that subscribers to HORTICULTURE shall have the best dollar's worth ever given in horticultural literature.

1908

To our readers, advertisers, friends and well-wishers everywhere, HORTICULTURE extends the compliments of the season and heartiest good wishes that prosperity, comfort and happiness may come to them in overflowing measure during the year upon which we now enter. Let each make resolution to do his part in the advancement of our art and the uplifting of every branch of industry connected with it. Better equipment, better products, better business methods and a better market—these are objects for the attainment of

TWO NEW WHITE SEEDLING CARNATIONS.

HOUSE OF THE MARCHIONESS

The accompanying illustration is from a photograph of a house of the new white seedling carnation Marchioness, raised by L. E. Marquisee, of Syracuse, N. Y. The house was planted September 15 and the photograph taken December 9th last. That in Marchioness Mr. Marquisee has a winner, all the local florists who have closely watched it for the past three years cordially agree. The conditions under which it has been grown this season have been most unfavorable, as the government weather bureau at Syracuse University reports fewer bright days for the months of October, November and December than have been recorded in the past five years. Then, again, the greenhouses are situated in a residential section of the city and are surrounded by large dwellings. What it is capable of doing under more favorable conditions all good carnation growers can readily imagine. It is described as not a cropper, but a steady bloomer; flowers 2 1/2 to 4 inches, high built and full, with very strong clove fragrance. It requires cool treatment 48 to 50 deg. at night—a matter of great importance when the coal bill is considered. That it is a very free bloomer, the photograph clearly proves, and there is not a florist that would not be pleased to own such a crop for his Christmas trade.

The Lloyd.

The illustrations show a vase of H. A. Jahn's new white seedling carnation, The Lloyd, and also a house of this variety which originated with Mr. Jahn in New Bedford, Mass., five years ago. It is a pedigree seedling with Lawson blood in it. Mr. Jahn states that in the first year he picked from the original plant 65 blooms, and last October the cut on one day from 10,000 plants was 3,000 blooms. He says it is not a cropper but always in bloom. The flowers are pure white, very fragrant, and measure 3 inches, very often 4 inches, across; stiff stems from 18 inches to 36 inches long. The garden committee of the Massachusetts Horticultural Society who visited Mr. Jahn's greenhouses gave The Lloyd a high endorsement.

VASE OF LLOYD

HOUSE OF LLOYD

A LETTER OF GRATITUDE.

President Thos. H. Westwood, of the Gardeners' and Florists' Club of Boston, has received a letter from the elder brother of the late John Clark, whose tragic death is recorded in our obituary columns, from which we extract the following:

"We found on our arrival in Boston that everything had been done which could be done by the neighbors and friends of the family, and as it would be impossible for us to thank each one individually, we wish you would on our behalf convey to the florists and trade generally in and around Boston, our sincere appreciation of the many kind acts and words we have received from their hands at this time.

"It is a debt of gratitude that will not be soon forgotten.

"Thanking you for your own kind words of sympathy, I remain,

"Sincerely yours,

"GEORGE D. CLARK"

AMERICAN FORESTRY ASSOCIATION.

The annual meeting of the American Forestry Association will be held in Washington, at the New Willard Hotel, on Wednesday, January 29, 1908, beginning at 10.00 o'clock A. M. On the evening of the same day a reception will be held at the residence of Mr. and Mrs. J. W. Pinchot and Mr. Gifford Pinchot, The Forester.

On arriving in Washington, members are requested to register at Room 395, Epiphany Building, 1311 G. Street, N. W.—the offices of The American Forestry Association. Programs and invitations to the reception will be issued at the time and place of registration.

NEWS OF THE CLUBS AND SOCIETIES.

NEW YORK STATE FRUIT GROWERS' ASSOCIATION.

The programme for the annual meeting of the New York State Fruit Growers' Association is considerably shorter than any previous ones, because it has been deemed advisable to have less formal addresses and more extemporaneous discussion. The meeting will be held in Syracuse January 8th and 9th in Empire Hall. The Chamber of Commerce of that city has donated several prizes for fruit exhibits. The judges will be instructed to bar all specimens showing San Jose scale.

The address of welcome will be given by Hon. Allen C. Forbes, Mayor of Syracuse, and the response by B. J. Case, of Sodus. J. R. Cornell, of Newburgh, President of the Association, will then address the meeting, after which will follow the annual reports of Secretary E. C. Gillett, of Penn Yan, and Treasurer C. H. Darrow of Geneva. There will be two addresses on the first day, one by Senator Henry M. Dunlap, on "Effect on Production of Apples Caused by Cross-Pollenizing," and one by Prof. John Craig, of Ithaca, on "Glimpses of Peach Growing in Various Parts of the United States." This will be an illustrated address. An interesting address will be that given by Prof. A. McNeill, chief of Fruit Division, Department of Agriculture, Ottawa, Canada, who will give his hearers information on the line of co-operation in the marketing of apples. It is said that Canadians have a more businesslike method in disposing of apples than have growers on this side of the border. Following this address will be one by S. A. Beach, Professor of Horticulture in the Iowa State College, at Ames, on "A Successful Organization and Its Lessons for Fruit Growers." Senator Dunlap will conclude the formal addresses with one on "Commercial Apple Growing in the Middle West."

THE AMERICAN CARNATION SOCIETY.

The rate of a fare and one-third has been again secured for the annual meeting of this society, to be held in Washington, D. C., Jan. 28, 29, 30. This is on the certificate plan; all you have to do is to be on hand about fifteen or twenty minutes before your train is due, ask the agent for a certificate for the meeting of the American Carnation Society, pay full fare going and you can then return for one-third of a full fare. As the two-cent rate is in effect in quite a number of states this will make a very cheap rate for this meeting and no carnation grower who consults his own interests can afford to miss it. Premium lists have been mailed to all of the members. Anyone who wishes a copy can obtain one by applying to the secretary.

ALBERT M. HERR,
Lancaster, Pa.

CONNECTICUT HORTICULTURAL SOCIETY.

The annual meeting of this society was held in Hartford on Friday, December 27. President Sternberg in the chair. The general purpose of this meeting was the election of officers for 1908. There was an extra large attendance of members, nearly a hundred being present. Following is a list of the officers who will guide the affairs of the society during the ensuing year: President, J. F. Huss; treasurer, W. W. Hunt; secretary, Alex. Cumming, Jr. The latter has been in the employ of the Parks Department for several years, and is a son of the retiring secretary. As shown by the reports of the treasurer and secretary, the financial condition of the society is excellent, and a brief resume of the business of the past year proved that our organization did much creditable work in the interests of horticulture.

PRESIDENT J. F. HUSS.

President-elect Huss outlined the work the society should undertake during the coming year. He intimated that various committees would be appointed, and that the flower shows to be held under the auspices of the society would be on a larger and more elaborate scale than they had been for several years. Papers on interesting horticultural topics would be read at all the meetings, and altogether a campaign of useful activity would be inaugurated.

President Sternberg feelingly referred to the bereavement recently suffered by President-elect Huss in the death of his estimable wife, and an engrossed resolution of sympathy and condolence was sent to Mr. Huss and his family in the name of the society.

DETROIT FLORISTS' CLUB.

President E. A. Scribner's selection of six members to decide whether there should be a spring or a fall flower show, or both, has fallen on E. S. Beard, Thos. Brown, Robt. Kage, Albert Pochelon, Bruno Schroeter and J. F. Sullivan.

Mr. Wm. Heilscher, our hustling and inventive wire-worker, is distributing a very handsome calendar.

TRI-CITY FLORISTS' ASSOCIATION.

The subjects which will be considered in papers and discussions at each monthly meeting of this association are as follows:

January: "General discussion of heating and building greenhouses."

February: "Propagation of Easter stock, such as lilies, hydrangeas, lilacs, and azaleas, etc."

March: "How, when and what are the best varieties of bedding plants for spring sales."

April: "Planting of shrubs and hardy plants, also, the best and most useful varieties."

May: "What are the most profitable and salable plants and cut flowers for Decoration Day?"

June: "Soils: How to prepare the best soil for roses, carnations, violets, mums and general bedding plants."

July: "The ladies' month; preparing of floral work and what are the best out-of-door plants to grow for funeral work."

August: "How to handle cold storage lilies and valley pips."

September: "When to plant bulbs for early and late flowering, and what are the best varieties for that purpose?"

October: "Poinsettias. Best varieties of azaleas for Xmas; are geraniums profitable for Christmas?"

November: "Out-door planting of bulbs, and what are the best varieties for show beds?"

December: "Propagation of roses, carnations, bedding plants, also sowing of seeds."

The committee which reported on the above subjects for the coming year's discussions is composed of Frank Woelz, Henry Gaethje of Rock Island, John T. Temple and H. M. Bills of Davenport, and Alfred Anderson of Moline, Ia.

NEWPORT HORTICULTURAL SOCIETY.

The regular meeting of this society was held December 24. President John T. Allan in the chair. The ball committee reported very satisfactory progress, and the newly elected financial secretary, D. J. Coughlin, reported surprising success in the collection of dues since assuming the office. He had to the credit of the society nearly \$100 in the bank, being very good work in two weeks. It is seldom Alex. MacLellan is absent from a meeting but a slight illness detained him this week. He has since entirely recovered. The new president, John T. Allan, has evidently started in with the determination to make his administration a success, which, however, is only possible when aided by all hands interested. The executive committee organized the same evening, electing John T. Allan chairman and David McIntosh secretary. D. M.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

To the members of the S. A. F. and O. H.

Greetings: On the opening of this new year, I desire on taking over the office of President of our national society, to extend to you my heartiest good wishes for a prosperous and successful year, both as regards our individual interests and those of the organization, the welfare and advancement of which we all have so much at heart. No man ever entered on the duties of the presidency of the S. A. F. and O. H. more conscious of the great responsibilities resting upon him than I do. To maintain the standard of efficiency to which the organization has been brought by my able predecessors is a task which even those most experienced in the work of the society must regard as a formidable one. But as the old saying has it, "The best of men are but men at best," I assume the leadership to which your suffrage elected me, promising you my very best endeavor to fulfil as far as I faithfully and possibly can, the trust, which you, my fellow members, have reposed in me.

But in order that the society shall measure up to its highest efficiency during the year 1908, I must have and expect to obtain, the fullest cooperation of all the members. I therefore urge the state vice-presidents to do their very best in securing new members in their respective localities, to spread abroad therein propaganda concerning the organization, its benefits, its usefulness, and how deserving of encouragement and support it is, by every man and woman engaged in lines of industry we are banded together to promote and advance.

Of the various committees appointed by my predecessor in office, I earnestly desire, as I feel sure of obtaining, the faithful and full performance of their respective duties which have been assigned to them, as on the result of their endeavors very much of the progress of our association depends. I also hope that every member, individually, will do his or her part in the furtherance of the work of the S. A. F. and O. H. "One for all, and all for one" should be the motto impelling each of us in our every effort along the lines of society work.

I wish to call particular attention to the forthcoming flower show to be held under the society auspices at Chicago, Ill., in the fall of this year. The committee appointed to carry out the detail of this our first undertaking in this line are now hard at work, and I bespeak for them the best assistance of all the members, looking to the ultimate success that is hoped for in our stupendous venture.

I would briefly refer to the great loss which our organization has sustained by the sad death of our secretary, P. J. Hauswirth. The work of the secre-

tary's office is being looked after by Mr. Willis N. Rudd, Morgan Park, Ill., whose well-known ability ensures the utmost efficiency in everything connected with that office.

The preparation of the annual report for 1907 is being rapidly pushed to a conclusion, and the publication and distribution of the document will be accomplished with as little delay as possible.

Again assuring you of the best that is in me, in the conduct of the society's affairs during 1908, and looking for, and expecting the cordial and hearty support of you all, I am,

Yours fraternally,

F. H. TRAEENDLY,
President S. A. F. and O. H.

President F. H. Traendly announces that he has appointed Messrs. John Young, of New York, and George Asmus, of Chicago, to serve as directors of the society for the term of three

W. N. RUDD

The New Secretary Society of American Florists and Ornamental Horticulturists.

years, beginning January 1, 1908. John Young is the well known wholesale florist of New York city. Mr. Young has served for many years as secretary of the New York Florists' Club, where he has won popularity by his faithful attention to the duties of his office and where the experience gained in club work has thoroughly equipped him for good service on the executive board of the National Society. George Asmus is manager of the Schiller retail flower establishment in Chicago. He is an enthusiastic worker in the exhibitions and other enterprises of the Chicago horticultural organizations and has also done good service in various capacities connected with the S. A. F., especially on the spotting features of the annual

conventions. He is an estimable representative of the younger element in the society and will make a good and earnest executive officer.

AMERICAN ROSE SOCIETY.

The commendations received by the secretary of the American Rose Society from the life members of the society who have received their certificates, show that these very handsome parchments are highly appreciated.

The Chicago exhibition of the American Rose Society will open on the fourth Wednesday in Lent, that is, the 25th day of March, and will run three days. The Chicago Florists' Club advises that the show will be held at Marshall Field's or at the Auditorium. The Rose Society has about ready for mailing the schedule of prizes. In Division F, the special prizes are thrown open for support from all America that has a good word or wish for roses.

There will be some fine papers offered at the annual meeting.

BENJAMIN HAMMOND, Sec'y.

TARRYTOWN HORTICULTURAL SOCIETY.

The regular monthly meeting of the Tarrytown Horticultural Society was held on Thursday evening, December 26, Mr. Frank R. Pierson presiding. James Bell and Hector McDoudd were elected active members. The following officers were elected: President, Robt. Angus; vice-president, Abel Weeks; secretary, E. W. Neubrand; corresponding secretary, L. A. Martin; treasurer, James T. Lawrie. James Ballantyne very ably opened a discussion on roses under glass, after which many of the members took active part. The annual dinner will be held at the Florence Hotel on the evening of January 15th. DAVID MacFARLANE.

CLUB AND SOCIETY NOTES.

The annual ball of the Newport Horticultural Society will take place January 8.

The lecture course conducted by the American Institute of the City of New York opens on January 8 in Berkeley Lyceum. George T. Powell speaks on "Agriculture as a Business and a Profession."

The Western Association of Nurserymen at their meeting in Kansas City, Mo., December 17 and 18, elected officers for the coming year as follows: President, E. P. Bernardin; vice-president, E. S. Welch; secretary, A. J. Holman, Leavenworth.

The committee on gardens of the Massachusetts Horticultural Society have awarded prizes as follows: The J. H. Hunnewell Triennial premium to the Morton F. Plant Estate, Groton, Conn., T. W. Head, gardener; special prize for best kept estate of from one to three acres to Hon. J. R. Leeson, Newton Centre, Mass., Jas. Cartwright, gardener; silver medal to James Garthley, gardener to H. H. Rogers, Fairhaven, for skillful cultivation of chrysanthemums; first prize for peony garden, to Dr. Minot, Milton; first prize for vegetable garden non-commercial, of 20,000 feet, to P. P. Baugs, Ayer, Mass.

Seed Trade

In this the first issue of HORTICULTURE for 1908, congratulations are extended to the American Seed Trade on the excellent position in which it now stands. Despite the money stringency, talk of panics, and a general plowing down of business activity, there appears no cloud of serious proportions on the seedmen's horizon. Excepting beans, most staples in the seed line are in short supply, and active demand at prices far above normal, and unless all indications are misleading, stocks in most lines will be greatly reduced or altogether cleaned out, and on the general shortage more actual profit will be made than on a full crop.

One class of our citizens seem scarcely to have known of any business depression, and that is the farmers. While staple farm crops have not been quite so large as those of 1906, according to Bradstreet's, they are worth 20 per cent. more, or over \$200,000,000 over the bumper crops of 1906. So long as the farmers are prosperous and have money to spend, there is no danger of any prolonged business depression, and as the seedmen's prosperity is largely dependent on the farmers, the present outlook is about as good as could be desired. During the panic of 1893-4 the farmers were not in the happy condition they are today. Then, they were groaning under debts, and farm products were selling at almost the lowest prices in half a century. The gold supply was inadequate, and the per capita circulation fully one-third less than at present. Let every one take an optimistic view of the future, and this confidence will of itself be a most important factor in restoring prosperity.

New bids have been asked for by the department of agriculture for spot seeds to be used in the present distribution, which seems to indicate that some persons have disappointed "Uncle Jimmie." Learning where some of the orders had gone last fall, it was hinted in HORTICULTURE at the time that the present situation was likely to develop. The absurd policy of buying only of the lowest bidder regardless of the standing of the concern, or their ability to deliver the goods, has long been a scandal to the department, and caused a general overturning only a few years ago at the time of the Nellis regime. Those upon whom the secretary has placed the responsibility of ordering the seeds and other items required by the department in that connection, know all about the scandals of a few years ago, and were largely instrumental in exposing the frauds being perpetrated on the Government, resulting from the ridiculous practice of recognizing only the lowest bid regardless of its source. Yet the same policy is being followed now by the same men, and inevitably with the same results. Early in November it was authoritatively stated that the department had placed orders covering all requirements in seeds, and now comes a fresh call for bids. Why? Simply because some one has failed to "make good" whose bid was too temptingly low for the department officials to pass. Everything required could have been secured from responsible

houses at very reasonable figures, but as the department will buy only at auction prices, these figures were too high. However, it looks as if in the final wind-up they would have to pay the prices or go without the goods. "Hence these tears."

Congress was very prompt in passing the supplementary appropriation of \$50,000 asked for by Sec. Wilson, and his credit need not now be doubted. This at least is satisfactory.

Mr. O. K. Natt has severed his connection with Josiah Young of Troy, N. Y., and is now open to accept a position. Mr. Natt is especially valuable to any one conducting an experimental farm or trial grounds, but can fill any position in a seed house, wholesale or retail.

The stock of Jos. A. Schindler Seed Co., New Orleans, was badly damaged by fire and water on December 15.

POPULARITY OF THE SWEET PEA.

The sales of the "Sweet Pea Annual" for 1907 amounted to about £21, as compared with £15 17s. in 1906. This is substantial evidence of the increasing interest that is taken in the society's official publication. The "Annual" for 1908 is being prepared by Mr. Chas. H. Curtis and Mr. Horace J. Wright, who report that the forthcoming issue will lack nothing in interest and usefulness when compared with previous efforts. A few of the items will be "More Historical Notes," by Mr. S. B. Dicks; "Popular Voting on Novelties," by Mr. G. H. Mackereth; "Sweet Peas in Devon," by Mr. R. Bathurst; "Wire Netting for Sweet Peas," by Mr. G. H. Leak; "Breakers Ahead," by Mr. Walter P. Wright; "Adherence to Principles," by Mr. George Gordon, V. H. M.; Medallists for 1907; The Audit for 1907; the Classification for 1907; report of the floral committee; list of officers, members and affiliated societies, and a complete list of all known sweet peas, prepared by Miss Jessie Cuthbertson.—Journal of Horticulture (England), December 19, 1907.

LIST OF PATENTS.

Issued December 24, 1907.

- 874,534. Wheel Plow. William H. Parlin, Canton, Ill., assignor to Parlin & Orendorf Co., Canton, Ill., a Corporation of Illinois.
- 874,566. Wheel Cultivator. Arthur F. Brown, Springfield, Ohio, assignor to P. P. Mast and Company, Springfield, Ohio, a Corporation of Ohio.
- 874,597. Plow. Edwin Jarrell, Riverdale, Kans.
- 874,776. Manure Loader. Henry J. Lawrence, Elmore, Minn., assignor of one-half to Oscar E. Seastrom, Elmore, Minn.
- 874,800. Beet Harvester. Edwin E. Shaw, Edgewood, Mich.
- 874,827. Check Row and Hill Marker. Winfield J. Botts, Havre de Grace, Md.

We learn that Suburban Life has been sold to McClure's.

ASPARAGUS ROOTS FOR FORCING

Each root will cover more than the top of a basket and is five years old. Will make excellent clumps for forcing. Only \$2.50 per 100 if ordered at once.
Rhubarb Roots for Forcing. Fine large roots for \$6.00 per 100. Will produce excellent results.
Asparagus Seed of an immense variety. This variety comes from the Palmetto but is twice as large. Seven to ten stalks in a bunch. Twenty dollars per pound. Only a limited quantity.

WARREN SHINN,

Woodstown, N. J.

STATEMENT OF PLANT IMPORTS.

There were entered at the port of New York during the two weeks Dec. 18 to Dec. 31, 1907, the following plants, etc:

From Rotterdam: H. F. Darrow, 4 cs. plants; W. Elliott & Sons, 1 cs. do.; P. Onwerkerk, 4 cs. trees; Sundry Forwarders, 34 cs. plants, 16 cs. trees, 1 cs. bulbs, 39 cs. roots.

From Antwerp: Stump & Walter Co., 4 cs. bulbs; Vaughan's Seed Store, 9 cs. do.

From Germany: H. F. Darrow, 60 cs. lily of the valley; W. Hagemann & Co., 362 cs. do.; C. F. Meyer, 158 cs. do.; S. Stern, 222 cs. do.; J. M. Thorburn & Co., 1 cs. seeds; To order, 1 cs. plants.

Via Havre: H. F. Darrow, 282 pgs. seeds; J. M. Thorburn & Co., 16 pgs. do.; Vaughan's Seed Store, 100 pgs. do.; Forwarders, 14 pgs. do.

From Copenhagen: Yokohama Nursery Co., 36 cs. garden seed.

From London: W. R. Huntington, 44 bls. garden seed; 22 bags do.

Via Southampton: C. C. Abel & Co., 27 cs. plants; H. F. Darrow, 170 pgs. seed; McLutchison & Co., 104 pgs. plants; August Rolker & Sons, 22 pgs. do.; J. M. Thorburn & Co., 35 bags garden seed; Weeber & Don, 3 sacks seed; Forwarders, 1 cs. trees.

From Glasgow: H. F. Darrow, 15 cs. trees.

INCORPORATED.

Norris F. Comley Conservatories, Lexington, Mass.; N. F. Comley, T. B. Hughes, A. E. Goldberg; capital, \$15,000.

Buffalo Cut Flower Co., Buffalo, N. Y.; J. H. Gould, L. H. Gould, G. R. Sheldon, Middleport, N. Y.; capital, \$25,000.

International Seed and Bulb Supply Company, Boston and Philadelphia; A. A. Holmes, Edna M. Holmes, Edith V. Henderson; capital, \$50,000.

Obituary

George Wainwright.

George Wainwright, nurseryman and florist of Trenton, N. J., whose death occurred early on the 31st December, 1907, and whom you spoke of in your last issue as having undergone an operation for cataract, which had rendered him helpless for three or four years, was my dearest friend, and the bravest, most honest and simple-minded man I ever knew.

Wainwright came of an excellent old Yorkshire family, several of whom made most enviable reputations for themselves. Henry, a younger brother, was mayor of Doncaster for several successive terms, and when he died as alderman, Doncaster suspended all business for his funeral. An uncle, John Wainwright, was quite an historian, having written several histories of the Yorkshire Wapentakes, and a brochure on the "landing of Julius Caesar in England."

George Wainwright was 82 years old on the 14th February last, when the writer and a few of his old friends gave him a surprise party. During last summer he felt he must discontinue business, and sold his nursery grounds on Princeton avenue; soon afterwards he underwent the operation for his sight, which resulted in its partial restoration, but was of course a shock to a man of his age.

On Christmas Day I dined with his family, and Wainwright indulged me with one of his characteristic arguments on evolution. After dinner he seemed exhausted, laid down on a couch, and soon to bed. On the morning of the 30th early he arose for a drink of water, stumbled, fell, severely hurt and shocked himself, and never recovered but for a few moments' recognition of myself and one or two of his family.

Wainwright learned his business in this country with the late Robert Buist of Philadelphia, serving him in company with the late Thomas Meehan. He then came to Trenton and about 1854 bought 100 acres of land where the Fashion Farm is now, and for a short time he conducted a farm there. He eventually decided to establish a nursery for himself, and in 1857 he bought the Wainwright Nurseries at Princeton and Ingham avenue. This tract he cultivated until last July, when he sold the property to Harrisburg parties and retired to private life.

He was fond of roses, and raised several fine hybrids. The "Dinsmore" was one of his, and was brought to the notice of the late Peter Henderson by the writer through an article in *The Country Gentleman*, describing its perpetual blooming. It is not so fine a grower on the Atlantic as on parts of the Pacific coast, however, but Henderson bought it, in company with John Henderson of Flushing, and changed its name from the "Pocahontas" — Wainwright's name. On his old grounds there is one of the finest male trees of *Ginkgo biloba* in the country.

For many years past Wainwright made a sowing of seeds of *Magnolia Lenzelii*, of which he had a fine speci-

men, and as you know, this was claimed to be a hybrid. My friend and I watched those seedlings with great interest, and some were very remarkable. Some had golden foliage, one was dark inside and out, far darker than the darkest *atropurpureas* or *nigras* I have seen. But there was no trace of the tree form among them, and I feel sure that all the so-called hybrids of bush form are nothing but *obovatas*.

Mr. Wainwright was liberal, kindly, honest, a good father, a warm friend and a grand Englishman.

Requiescat in pace. J. MacP.

John Clark.

A terrible calamity, one of the saddest events of the holiday season, was the tragic death of John Clark, aged 42, his wife Fanny, 35, and their three children, John Clark, Jr., 11 years, Philip, 7 years and Doris, 4 years, all of whom perished in a fire which destroyed their home at Watertown, Mass., early on the morning of December 27.

John Clark was a salesman for the H. E. Fiske Seed Company, of Boston. His father John F. Clark is em-

JOHN CLARK

ployed at the Botanic Garden in Washington, one brother is engaged in the florist business in Washington, and two other brothers, George and James are in the employ of H. A. Dreer, Philadelphia. Mr. Clark has been in the seed business from his youth up. He had been with Peter Henderson & Co., New York, Joseph Brock & Sons, Thos. J. Grey & Co., and W. W. Rawson & Co., Boston, previous to engaging with the Fiske Company. He was widely known and the calamity has cast a gloom over the seed and florist trade circles about Boston, where he was a member of the Massachusetts Horticultural Society and the Gardeners' and Florists' Club. The cause of the fire is a mystery. Neighbors discovered the blaze about 1 A. M. and sent in an alarm, but the firemen were absent on another call and there was some delay. The bodies of Mr. Clark and the two boys were found in the hall at the head of the stairs, death having come from suffocation. The mother and lit-

tle girl could not be reached until after the fire had been extinguished and their bodies were badly burned. The date was the eleventh birthday of the eldest boy. All were buried in one grave in Ridgelawn Cemetery. The funeral services were held in the open air in the presence of about two thousand people. Many beautiful floral offerings from the seed trade, the Florists' Club and other organizations and individuals, testified to the respect and sorrow of Mr. Clark's associates.

Reuben H. Warder.

Reuben H. Warder, secretary of the Lincoln Park Board and superintendent of the park for the last six and one-half years, died on December 26, at his home, 50 St. James place, Chicago, after an illness of two days. He was 64 years old.

Mr. Warder, who was born in Cincinnati, relinquished his position as superintendent of the park in his native city to come to Chicago in June, 1901. At that time he was known as a skilled horticulturist, and his coming to this city at the solicitation of the Lincoln Park board was for the purpose of rehabilitating the North Side parks. This work has been accomplished under his direction, and the members of the board refer to his efforts in high terms of praise. Mr. Warder's father, J. A. Warder, was one of the distinguished horticulturists of his time, belonging to most of the societies interested in that work, and he took an active part in the formation of organizations calculated to spread the study of this particular branch. The junior Mr. Warder took a deep interest in the reconstruction of Lincoln Park, and all of the innovations are along lines suggested by him. Board members were impressed with the deep study which he gave to his work. The body was taken to Cincinnati for burial there.

Myrtle Rosenfield.

J. F. Rosenfield, peony specialist of West Point, Nebr., has been greatly afflicted in the loss of his charming and gifted daughter Myrtle, aged 29 years, who died December 16th.

The following is from the local press.

"Accomplished in music, a pure and spotless character, a cordial greeting for everyone, kindness personified in her being for father, sisters and brothers, the light of their home, one of the most welcome callers in any of our homes, a favorite among the young people, this young lady was on earth long enough to leave every life with whom she came in contact better, and the good seeds sown will multiply a thousandfold in their fruitage during the years to come."

Service was held at the home and also at the Congregational Church, the post pastor, Rev. Crofts, of national reputation, officiating. Some years ago Mrs. Rosenfield died, leaving eight children; then Myrtle took charge of the home. The great loss falls heavily on the family. C. S. HARRISON.

Walter White.

Walter White, one of the oldest flower growers in Philadelphia, died at the Old Men's Home December 26,

at an advanced age. Mr. White started the year before Dreer did (which we understand was in 1836) and continued actively in business until a few years ago, in West Philadelphia. His location, latterly, was at 36th and Chestnut. He was a very honest, hard-working man, but did not have the gift of gathering riches, but through the efforts of friends, chief of whom may be mentioned Robert Craig, he passed his last years comfortably in the Old Men's Home. He came originally from Ireland along with two brothers, all three being now gone and no family left behind. One brother ran the retail flower store on North 8th street for many years; this establishment being still in existence under the title of White Bros.

Francis Quinlan.

Francis Quinlan, a prominent florist of Lynn, Mass., died at his home on December 28, aged 48. For many years Mr. Quinlan was connected with the firm of E. & J. Bowditch, landscape gardeners of Boston, and laid out some of the largest estates in this country. Twenty years ago he started in business in Salem but later moved to Lynn, where he has conducted a large florist business. He was prominently connected with many fraternal organizations.

Arthur B. Howard.

Arthur B. Howard, who was born in Belchertown, Mass., June 1, 1833, and lived there all his life, died at his home on December 20. Mr. Howard was an enthusiast in everything pertaining to flowers or fruit, and held an enviable reputation as a horticulturist and pomologist. He has been a successful exhibitor both in his own and other states. His petunias have long been widely known. Two children survive.

Everett B. Clark.

The death of Mr. Everett B. Clark, of Milford, Conn., will be sincerely mourned by practically the entire seed trade of the United States and Canada. He leaves a record for uprightness and fair dealing which his successors will do well to imitate. For want of time further references to Mr. Clark will be left for a future issue.

Mrs. W. H. Gunther.

Mrs. W. H. Gunther of New York City passed away on Christmas eve. Funeral services were held on the evening of December 26.

Mrs. Julius E. Schray.

Mrs. Julius E. Schray, of St. Louis, died on December 23 and was buried on Christmas day.

PHILADELPHIA NOTES.

Frank W. Whiteley, late of Coles & Whiteley, Lansdowne, is now located with the Allen Piano Co. at 1715 Chestnut street.

The dance and reception given by James W. Paul in honor of his daughter at Horticultural Hall, December 26, was one of the most elaborately decorated affairs ever held in Philadelphia, and reflected great credit on the artists, J. J. Habermehl's Sons. The Benedicts' ball at the same place December 27 was also an important function, being handled in the decorative time by Graham Blessings on the good spenders. A tremendous lot of flowering and foliage plants found appreciative use in these events, and incidentally made profit and fame for the business. The object being to enable

* * * "Wealth and pride To obtain their wish—the world's applause" of course; but that's what we horticulturists are here for to a large extent.

Ino. Welch Young is laid up with typhoid fever. His many friends sincerely wish him a speedy recovery.

Robert Craig reports a very good holiday trade, although it was a little late in starting. Poinsettia, in Mr. Craig's opinion, deserves more care in culture. For fifty years this old favorite has held first place. Lorraine begonias and Dracaena terminalis were close seconds. Good cyclamens and azaleas were also favorites. A novelty for Easter will be the new German cluster rose (Tausendschon), of which some two thousand plants were prepared specially abroad for the occasion. The Dingee & Conard Co. are making a feature of this new variety in their catalogue trade this year.

W. E. McKissick is one of the many victims of the grip. There may be a few minor exceptions, hardly worthy of mention, but nearly all the men of mark have had their siege in the past few weeks.

P. Welch, Boston, was a visitor among the wholesale centres. We have also had the pleasure of seeing W. J. Stewart, Frank Traendly, J. K. Farquhar, W. H. Elliott, H. B. Beatty, W. F. Kasting, Wm. F. and Adolphus Gude, Willis N. Rudd, and other shining lights the past week.

PERSONAL.

Robert Simpson, president of the American Rose Society, is down with grippe at his home in Clifton, N. J.

While Mr. and Mrs. Robert Hunnack of Newport, R. I., were out driving on Christmas eve their carriage accidentally collided with a heavy wagon owned by V. A. Vanicek. They were thrown into the street and painfully cut and bruised. They were assisted home and medical aid summoned, and both are now rapidly recovering.

Visitors in New York this week include Messrs. Swoboda of Schmidt & Co., Erfurt, Sander of St. Albans, England, Howard M. Earl of Burpees, and Geo. C. Watson, Philadelphia, W. N. Rudd, Chicago, J. K. M. L. Farquhar and P. Welch, Boston, W. F. Kasting, Buffalo, J. N. Champion, New Haven, Conn., Carl Jurgens, Jr., Newport, R. I.

EXTRA FINE BOXWOOD \$17.50 per GWT.

HENRY M. ROBINSON & CO., FLORISTS' SUPPLIES 15 Province St., and 9 Chapman Pl., BOSTON

NEWS NOTES.

The John C. Moninger Co., Chicago, have the contract for furnishing the frame work, ventilating, etc., for the greenhouse to be built in the City Park, Denison, Texas.

The greenhouses of M. L. Tirrell, of Randolph, Mass., were badly damaged by fire on the morning of December 26. It is thought a defective pipe chimney was the cause. It is stated that no insurance was carried.

Edward Schnell, of St. Louis, Mo., was arrested recently for planting shade trees in front of his home, there being a city ordinance making it an offence to plant trees alongside a public walk. Judge O'Halloran while considering that the defendant had done a meritorious act, fined him \$5, which was suspended on promise to plant no more trees.

Floral Tribute to the Late John Clark by the Seed Trade of Boston.

BUSINESS CHANGES.

E. H. Lucking has purchased the Dowell greenhouse, Bradford, Pa.

D. H. Green succeeds to the business of Green & Baylis at West Grove, Pa.

Henry Seitz has taken over the business of Seitz & Nordell, Glenlake and Evanston avenues, Chicago.

On January 1 the firm name of Nathan Smith & Son, Adrian, Mich., was changed to Elmer D. Smith & Co., who will concentrate their efforts on the chrysanthemum and aster. Particulars are given in our advertising columns.

NEWS NOTES.

The failure of Mackintosh, florist, 1144 Broadway, New York, is reported under date of December 28.

E. W. Pearson, of Newburyport, Mass., has recently added the raising of early vegetables to his florist business.

The Michigan Cut Flower Co., of Detroit, has started to use its cold storage ferns and every case opened so far has contained 26 good ferns to each bunch.

M. T. Twomey, proprietor of the Oak Hill Nurseries, Roslindale, Mass., has purchased about seventy-five acres of land at Wadsworth station on which to grow his nursery stock.

John E. Freudenberger, who will be remembered by those who attended the S. A. F. Convention at Dayton, has left the National Cash Register Company and will start a business of his own in Dayton.

Chas. L. Seybold, superintendent of Carroll Park, is chairman of the committee in charge of the flower show to be given in connection with the exhibition of the National Sculpture Society next April in Baltimore.

FLOWER MARKET REPORTS

BOSTON Reports of business throughout New England are generally favorable and indicate that normal conditions prevail in this section. Although the weather has been conducive to a heavy crop of flowers the demand from outside points has been very brisk and Boston houses doing a shipping trade have been very fortunate as the call has been very steady ever since Christmas. Locally the business has not been so satisfactory, possibly owing to the fact that the retail trade in the city is pretty well loaded up with plants, which are naturally given first chance at a sale. At present writing cut flower prices are advancing slightly over the rates prevailing in the early part of the week. Lily of the valley, hyacinths and narcissi are the most sluggish stock at present. This bulb forcing seems to be overdone.

BUFFALO The holiday trade for 1907 was a hummer, if not a record breaker. The balance of the old year was carried out with a good volume of business and as large, if not larger, than previous years, in spite of the so-called hard times. Holly and other festooning in the decorating line was well cleaned up, save Xmas trees, of which there were a few left for souvenirs. The shipping trade was excellent, trains running fairly well on time and there was not so much worry as in previous years. In the plant line Lorraine begonias sold well and primulas and other flowering plants exceeded last year's sales. Azaleas were not plentiful and poinsettias were rather short. The cut flower stock was in good supply; Beauties in excellent quality and plenty to be had; Richmond of select quality were short in supply and prices ruled high; Killarney and other roses sold exceptionally well; violets were plentiful enough and cleaned up better than previous years; lily of the valley, peas, orchids and gardenias were in good demand, while narcissi were a "flood" and prices dropped exceedingly low. As usual on holidays, the carnation is in most demand, especially red; the latter were short in supply and red Lawson held out to good advantage. Other varieties were a trifle scarce at the beginning of each holiday week, but all orders were completely filled and a good cleaning up was had. There was an enormous supply of greens, especially smilax, though other greens, especially ferns, were well in demand.

DETROIT Every florist regrets having built his calculations on newspaper items yelling panic, and finding himself therefore not sufficiently prepared for the Christmas trade. Such was the predicament of a great majority. Everything sold at the same good prices of last year and a good deal more would have been turned into dollars if the goods had been here. But even with our scarcity of flowers, especially in carnations, we noticed with great satisfaction a lot of about 2,000 Lawson and Enchantress which must have been held back at least ten days go to the dump. May that be a lesson not only for this grower but for all others who believe in crowding the holiday

market with pickled stock. Some large decorations are booked for the New Year's ball, making business in general satisfactory.

INDIANAPOLIS The reports of the different retailers vary as to Christmas trade. Some claim that business was away ahead of last year, others about 15 per cent. less, but as a whole everybody seems well satisfied. Despite the cry of scarcity of flowers there appeared to be a large quantity. A big supply of flowering plants was on hand and relieved the market to a great extent. The principal scarcity was in large and medium azaleas. Great quantities of Lorraine begonias were sold but they don't bring the prices and have the run that they used to. The general impression was that prices of flowers would surely weaken, but orchids, lily of the valley, violets and fancy grades of Beauties and teas brought prices fully up to those of a year ago. Holly was a great disappointment; little or no fancy holly was to be seen and it was not equal to the demand. There was nothing in the way of a novelty. The absence of freezing weather was a great advantage in the delivery of flowers and plants. Christmas greens of all kinds were among the best selling articles and helped considerably to swell the receipts of many of the retailers.

NEWPORT The prices obtained for plants and flowers at Christmas equalled those ruling on former occasions with perhaps a trifle higher figure for some things. There were good supplies of all salable material and there was nothing of any account left over. Cyclamens, Lorraine begonias, poinsettias and ardisias sold well. Ferns went quickly in small and medium sizes. Holly was a profitable item from the start. Cut flowers were in most all lines in supply about equal to the demand. There was a big demand for American Beauty roses towards the close, and it could hardly be met for immediate delivery. Every man in the business had all the work he could attend to for two days and when it came to the end there was but very little left unsold.

NEW YORK It is now several years since most of the glory of New Year's Day as an occasion of great floral importance in New York departed. This season's event was, therefore, not expected to make any sensational record and the fact is that it did not. Still there is a very evident feeling of satisfaction with the results generally of the New Year's business. This is particularly true of the retail dealers, who are naturally pleased with the moderate wholesale prices at which choice material has been obtainable all through the holiday season as compared with former years. Never before has it been possible to obtain holiday gardenias, cattleyas and special American Beauty roses at the figures prevalent since Christmas. Cattleyas are in very heavy supply at the present time in this market. Violets are plentiful but of excellent quality and have maintained value unusually well, there being, however, a good

many stale bunches from some shippers. Lily of the valley is probably the most unfortunate flower on the whole list, the receipts in wholesale market far exceeding the requirements, necessitating the calling in of the fukir to help unload at "bargain counter" prices. Much of the lily of the valley is below standard of quality. Roman hyacinths and paper-white narcissi have been hard to move. Carnations have done well. Plants such as Lorraine begonias, poinsettias, heaths and azaleas figured largely in the window displays and general stock of the retail florists, the inference being that this class of material was not fully sold out at Christmas.

PHILADELPHIA While the inevitable easing up of prices took place after the Christmas rush business was fairly satisfactory last week, and aided by a good out-of-town demand kept the distributors on the jump—even on Sunday. At this writing (Monday) prospects for the new year trade are good, and if the weather is anything like propitious very little will go to waste. American Beauty roses continue of splendid quality and dominate the market. Brides and Bridesmaids have improved considerably as to color and hold firm as to prices. Richmonds are in good demand. Chatenay and Wellesley are in evidence, but these do not cut a wide swath in this market. Killarney is very good at present. The carnation market holds its own nicely as to prices, and quantity and quality is all that could be wished. Lily of the valley is still rather too plentiful for the demand. Violets, while good stock, do not go with quite the usual snap. Orchids are plentiful with healthy demand. Romas and narcissi are in over-supply, yet there is usually found a place for them somewhere. Mignonne continues very good stock—one of the most satisfactory on the market. Poinsettias are very fine as to quality, with values much in buyers' favor.

WASHINGTON The phenomenally beautiful weather that has lasted through almost the entire Christmas holidays has proved a boon to the florists generally. All retailers express themselves as more than pleased with the outcome. Small potted plants sold unusually well. Richmond and Killarney roses are more in demand than others, but Beauty is about the only rose that keeps up in price. The large retailers have their hands pretty full with the New Year decorating. It is feared that the continued warm weather will be a great menace to hardy plants and climbers. Nearly everything is coming into good bud.

TWIN CITIES Business was good and the outlook for this week is bright. Prices are steady, retailers complaining they are too high to make a fair profit. Roses and carnations are shipped in from Illinois as well as from Iowa in large numbers.

FOR SALE—Cheap for cash, five-foot horizontal tubular boiler, complete, good as new. G. S. Rainsburg, Somersworth, N. H.

STORAGE COMPANY MUST PAY.

Lily Pips Sprouted in Freezer—Court Holds That Refrigerating Company Must Keep Temperatures Sufficiently Low to Preserve the Goods.

Julius Roehrs' exotic nurseries of Rutherford, New Jersey, will celebrate the present holiday season with a check for over five thousand dollars (\$5000), recovered through its attorneys, Hatch & Clute, of 100 Broadway, New York, in a law suit which involved points of great importance to florists and cold storage men.

The decision in favor of Mr. Roehrs has just been unanimously affirmed on appeal by the Appellate Division of the Supreme Court in New York, and the substantial sum of money turned over by the storage house to make good the loss caused by the sprouting of the pips.

It appears from the record on the appeal in the case, that in the winter of 1903-04 Mr. Roehrs received about a million lily of the valley pips from well-known German florists. He used about half of the pips in question at his nurseries in Rutherford, N. J., during the winter of 1903, and about the middle of March, 1904, he stored the remaining half million pips with the Manhattan Cold Storage Company, of New York. The following summer Mr. Roehrs discovered that the pips while in the storage warehouse had sprouted and were growing. He immediately caused an investigation to be made by his lawyers, who represent a number of local florists and who have given special attention to the legal rights of the trade in the matter of the very heavy losses which have been sustained through the careless storage of goods. As a result of this investigation the demand was made upon the storage company to reimburse Mr. Roehrs for the loss of the pips, and this demand brought about a test of the respective rights of the florist and the storage house under the circumstances disclosed.

It was claimed, on behalf of the storage company, that its legal obligation was not to "preserve the goods," in the absence of a special agreement for a specific temperature, and that, as Mr. Roehrs could not establish what occurred in the storage warehouse, he could not recover. It was also claimed that the condition of the goods at the time they were received from Europe, as well as their condition at the time they were stored, was in doubt, because not all of the boxes were examined at Mr. Roehrs' place.

So important were these points to the trade generally, that Mr. Roehrs determined to fight the case to the end, and on the trial many well-known florists and growers of Lily of the Valley testified as witnesses. Mr. Roehrs' attorneys succeeded in getting before the jury the temperature records of the storage company, which contained some damaging evidence in the way of temperature, which experts said were too high to preserve the bulbs. It was also shown that the goods of several other dealers stored there during the same period were found to have sprouted. Expert storage men were brought from Philadelphia and other cities, who testified that the storage plant of the defendant was constructed according to the most

Is Your Name In The Above List? If Not, Why Not?

modern plans and was equipped with a proved refrigerating machinery; but there was strong substantial evidence offered, to establish some special carelessness and oversight on the part of the storage company, during the spring of the year in question. A sufficient rise in temperature was indicated to start the bulbs from their dormant state, and it was proved by the testimony of experts, that when once the pips had sprouted, their growth could not be stopped or retarded without destroying them. This evidence convinced the jury, which decided in favor of Mr. Roehrs, and they brought in a verdict for the full value of the goods. The court ruled against the storage company, on the point which was made by its lawyers, that all of the boxes of the goods should have been opened and examined by the florist before the goods were placed on storage. The court sustained the contention that only a reasonable examination, in ordinary course of business, is necessary.

It is needless to say that the defendant storage company, and other companies in the same line, will take special notice of this case, in the future conduct of their business, and it is also apparent that the decision will attract much attention from florists, who cannot fail to benefit largely by the protection which this decision affords them.

THE POTATO.

A paper read before the Southampton Horticultural Society by Walter L. Jagger.

If in the presentation of this paper the personal pronoun I is prominently presented I trust you will not think it to be in a spirit of egotism. When nine years old I was called upon to assist in the planting and culture of potatoes and have been at it every year since, so that I may justly claim to have been a grower of the *Solanum tuberosum*, for more than half a century and yet at the present time feel that I can only lay claim to a hack seat among the army of potato growers who are making a financial success of the business. The tools used for planting when I began consisted of a plow and manure fork only, and for tilling this same plow, a small harrow and a hoe; this hoe was usually manipulated by the boy and in most cases was in size all out of proportion to his strength. Plowing 4 rows, 40 rods long, was considered a fair day's work. The only recreation we could get was to exchange work with the neighbor's boy over the pond; you help me hoe two rows and I'll help you hoe two; the work went more easily when we had companionship. My father was one of the very first in this locality to purchase a horse hoe cultivator and this tool at that time did very efficient work. It is still in existence in my tool house, but its use has long since been superseded by better ones and it is only kept as a reminder of the past.

In the season of 1867 potatoes nearly all rotted, and there were not enough produced in the locality to supply the demand. Many had to substitute turnips and the cereals. My father, who was something of an experimenter, had this year eight rows, 40

"SCALECIDE"

SAVE YOUR TREES THIS FALL DON'T WAIT TILL SPRING

ORDER
A
BARREL
NOW

The chances are they'll be killed by San Jose Scale. Take time by the forelock—spray with **SCALECIDE**. It kills every insect it touches. Cheaper than Lime-Sulphur or any home-made mixture, and easier to apply. Non corrosive, non-clogging, 32 percent oil—the largest amount with less water than is found in any spray yet discovered. We prove it. Order a 50-gallon barrel at \$25. Makes 800 or 1000 gallons costing 25c to 30c at any station in the U. S. east of Mississippi and north of Ohio Rivers. There's nothing cheaper. Send now for free, special booklet W.

B. G. PRATT CO., Mfg. Chemists,
11 Broadway, New York City

rods long, planted with seaweed in the drill, and these produced enough to supply the family with potatoes. The balance of the field all rotted and were not worth digging. I have often wondered whether salt might not help prevent rot in potatoes. The chemical fertilizers of the present day had not then come on the market. Peruvian guano, ground bone, fish lime, wood ashes, mock farm manure, were used in different combinations and proportions, and the process of planting an acre of potatoes was a laborious one.

After coming into possession of a farm of my own I spent a good deal of time and money experimenting with different varieties of potatoes. One year I grew 13 varieties, some of which were almost a total failure, entailing on me quite a money loss. It took me quite a number of years to find out which was the most profitable variety for me to grow, and after a time I learned it was a great deal cheaper to let the other fellow do most of the experimenting and confine myself to growing one variety which yielded well and found a ready market, which at the present time appears to be Carman No. 1.

I grew one year on a measured acre 396 bushels of marketable potatoes and 10 1-2 bushels of culls, making a total yield of 406 1-2 bushels on the acre. The variety was the Early Norther. I never had any such yield before nor since. I made no special effort to grow this acre of potatoes, but like Topsy they "just grew."

For the years 1897, '98, '99, 1900, I had charge of three acres under the direction of Dr. Jordan, director of the New York Agricultural Experiment Station, at Geneva. These three acres were divided into ten parts each, making 30 plats in all, and the objects were: First, a comparison of different amounts of complete fertilizer from 500 to 2,000 pounds; second, a test of the relative efficiency of the common Long Island formula 4-8-10 mixture and a fertilizer based on the composition of the potatoes, a 7-4-10 mixture; third, the use side by side of sulphate and muriate as a source of potash; fourth, a comparison of formula containing 10 per cent potash with the same mixture in which the potash was reduced to two-thirds, one-third and nothing. The materials used in compounding all the fertilizers were citrate of soda, dried blood, acid phosphate, sulphate or muriate of potash and land plaster.

I will not at this time enter into details as to results; suffice it to say that the experiments appeared to prove that 1,500 pounds was the limit of profitable application. The 4-8-10 mixture gave better results than the formula based on the supposed draft of the potatoes

on the soil. The tests of muriatic and sulphate were not conclusive and the surprising thing was, notwithstanding the large quantity of potash taken from the soil by the potato tubers, 30 pounds in 100 bushels, the crops in these tests seemed to find a sufficient supply of this element in the natural soil, for the plats receiving only nitrogen and phosphoric acid averaged slightly more than those receiving one-third or two-thirds of the full amount of potash per acre, and only a fraction of a bushel less than that receiving the entire amount.

The composition of the tubers evidently varies according to seasons and soils and fertilizers, the variety grown, etc. I suppose you all have noticed that some seasons potatoes cook better and have a better flavor than at others. It is claimed that sulphate of potash produces a finer quality of starch than muriate, but from my observation and experience I am inclined to think that soil, season and variety have fully as much to do with the composition of the potatoes as the kind of fertilizers used. Albert Carman, former editor of the Rural New Yorker, the originator of several varieties of potatoes, has to my mind done as much or more for the benefit of the people of this country than Luther Burbank with all the plants and flowers which he has originated, though if my memory serves me right, the Burbank potato was one of those used by Mr. Carman in crossing to produce the ones he did. Understand me, I do not intend in the least to disparage the work of Mr. Burbank; he has wrought wonders and a history of his creations in plant life is as fascinating as a novel.

THE NORTH SIDE RESULT of our Steel Eave Plate is what we want you to know. When we say this eave plate of ours clears itself from snow and ice, we are talking particularly about the north side of the house.

This photograph of the north side of this 40 foot Iron Frame house of Mr. Jeff. Doremus, at Madison, N. J., was taken last winter at four o'clock on an afternoon when the mercury was hanging around the below zero mark. *The eave is cleared of ice.*

But don't think the steel eave plate is for the Iron Frame House only — we use it in our Half Iron Construction and are ready to sell you ten or ten hundred feet of it with the roof bar brackets bolted to it. Get the price — and get it now.

HITCHINGS AND CO.

GREENHOUSE DESIGNERS AND BUILDERS.

Manufacturers of Heating and Ventilating Apparatus.

1170 Broadway, NEW YORK.

Two Ways the First Cost OF THE Wide House Wins Out

A house 11 feet wide requires identically the same sides, same ridge, same work in setting side posts and putting up the frame, same amount of glass and paint as the 30 foot wide house: so one wide house is not only cheaper to erect, but a very considerably cheaper to maintain, than two narrow houses covering the same space. Don't make the mistake of forgetting the difference between cutting expense down and cutting it off at both ends. The large house cuts both ends — the building end and the maintaining end.

Get your order for a Sectional Iron Frame House in at once so we can make prompt deliveries the first building day in the Spring.

We make every part of a greenhouse but the glass. We sell any part.

LORD & BURNHAM CO.
Greenhouse Designers and Manufacturers

1133 BROADWAY, cor. 26th Street, N. Y.

PHILADELPHIA Branch: 1215 Filbert St.

These U-Bar greenhouses are the central feature of an extensively laid out ground scheme.

By connecting the potting-house by a 11 feet passage the shading of the central house is overcome and valuable space for propagating benches secured.

THE owner of this range took unusual pains, time and trouble to investigate thoroughly the merits of the various greenhouse constructions, and placed the order with us only after he had become convinced that the U-Bar construction is greatly superior to any other. Our catalog tells in an interesting way all about the U-Bar construction. Send for it. **Pierson U-Bar Company**, Designers and Builders *U-Bar Greenhouses*, Metropolitan Building, 4th Ave. and 23rd St., New York.

WINSOR and WHITE ENCHANTRESS Strong Rooted Cuttings Now Ready For Delivery

WINSOR has proved to be the finest carnation in the light pink class. We sold a large quantity of it last year, but there will be a much larger sale for it this year. At the English Carnation Show held in December, it was the winner in the light pink class. It is doing well everywhere and will supplant everything in that color.

WHITE ENCHANTRESS will occupy the same position among white carnations that Enchantress does among flesh pinks. It has all the good qualities of the common Enchantress,—long stem, earliness, large size, freedom, etc. In our opinion, it is by far the best white carnation ever introduced.

We have a splendid stock of both Winsor and White Enchantress ready for immediate delivery, and will guarantee perfect satisfaction with the cuttings supplied. Do not wait, because the demand for these varieties is bound to be enormous. **Order early, while we can promise immediate delivery**, and secure gilt edged stock. We have a large stock of both of these varieties, and all our cuttings are heel cuttings, taken from flowering stems. On account of the quantity that we are growing, we are not obliged to over-propagate, and our stock is in the most perfect and healthy condition.

Strong rooted cuttings from sand, \$6 per 100, \$50 per 1000. Extra strong transplanted cuttings from soil, \$7.50 per 100, \$60 per 1000. Strong established pot-grown plants \$9 per 100, \$75 per 1000.

ANNOUNCEMENT

Our new seedling carnation, **TREADOR**, will not be disseminated until January 1909.

For further particulars address,
The H. WEBER & SONS CO., Oakland, Md.

Wanted - Unrooted Cuttings

of Rose Pink and White Enchantress, Victory and Beacon.

ADDRESS, C. L., care of WELCH BROTHERS
226 Devonshire Street, Boston

Rooted Carnation Cuttings

Pink	100	1000
Aristocrat	\$6.00	\$50.00
Windsor	6.00	50.00
Rose Pink Enchantress	3.50	30.00
Enchantress	3.00	25.00
Lawson	2.50	20.00
Joost	2.00	15.00

White	100	1000
White Perfection	3.00	25.00
" Enchantress	6.00	50.00
" Lawson	3.00	25.00
Queen	2.00	18.00
Boston Market	2.00	18.00
Louise	2.00	18.00
Lt. Peary	3.00	25.00
Bountiful	2.50	20.00

Red	100	1000
Beacon	6.00	50.00
Victory	3.00	25.00
Robert Craig	3.00	25.00
Flamingo	2.50	20.00

Miscellaneous	100	1000
Patten	2.50	20.00
Harry Fenn	2.50	20.00
Harlowarden	2.50	20.00

Stock Guaranteed - Prompt Deliveries

Sweet Peas at Christmas

The accompanying photograph is of a sweet pea house here taken just before Christmas. The varieties are Mont Blanc, and Christmas Pink (Zvolanek's). They were sowed the first week in September, and were grown along very cool until they commenced to set bud. The temperature was then increased to 52 degrees nights and 65 to 68 degrees on bright days. They are on the solid and are planted in rows three feet apart crosswise the house. The house is 30 feet wide. The rows are 26 feet long allowing 2 feet at each side for passage way. The house is 6 feet high at the eaves. Cutting was commenced at Thanksgiving. All the heating pipes are on the sides.

William Lin

The Paeony Disease

Editor HORTICULTURE:

The article in your paper of January 14th, by Mr. E. W. Morse in reference to a new paeony disease, is very likely nothing but what paeony growers have known for some years as the Black Rot. From observations which I have made, I am inclined to the belief that the infection takes place in the ground.

In dividing a fine variety in fall of 1906 into thirteen divisions I found that in May, 1907, three of the divisions had failed to grow. In digging them up, it was observed that the crown was rotted off of all three. These could not have been affected through the leaf and stalk, because the stalk had been cut off to three or four inches when the whole plant was divided.

The treatment given these three roots was taking them and cutting away the affected parts, and planting them in a new place after a thorough dusting with air-slacked lime. All three grew. One was finally cut off by cut worms; but the other two grew all through the season, and I believe they will come all right next spring. As many as eight years ago I read an article by a German professor saying that the best remedy for this disease was lime.

I have tried also this treatment. Dig the plant up and cut away the bad part and soak the plant in a solution of Formalin, then plant in an entirely new place. An old grower whom I have corresponded with in France soaks them in a solution of sulphate of iron. The Formalin solution is the best fungus killer.

I have lost wholly only two plants by this disease, so far as I know, and these I neglected.

E. J. Shaylor

Peony Specialist.

Weights and Areas for Fertilizers

The table below may be useful to those who wish to compare the amounts of fertilizer used outdoors on large areas with corresponding values used indoors on small areas. It may also interest those wishing to use a soluble fertilizer by means of tanks, Kinney pump, wheeled water-barrel or hand water can.

Pounds per acre. (43,560 sq. ft.)	1 lb. will cover	1 oz. will cover
2,000 Pounds	22 sq. ft.	1.3 sq. ft.
1,000 "	44 "	2.7 "
900 "	48 "	3 "
800 "	55 "	3.5 "
700 "	62 "	4 "
600 "	72 "	4.5 "
500 "	87 "	5 "
450 "	97 "	6.5 "
400 "	109 "	7 "
350 "	124 "	8 "
300 "	145 "	9 "
250 "	174 "	11 "
200 "	218 "	14 "
150 "	289 "	18 "
125 "	336 "	22 "
100 "	436 "	27 "
75 "	578 "	36 "
50 "	872 "	54 "
40 "	1,090 "	68 "
30 "	1,446 "	90 "
25 "	1,744 "	108 "
20 "	2,178 "	136 "

In case of plant foods dissolving completely in water values much stronger than 200 lbs. to the acre would not commonly be used and in most cases much less.

It should always be clearly borne in mind that the standard referred to in applying any fertilizer is the *weight per area* and in the case of water soluble nutriment the actual weight that finally reaches the soil depends on both the *amount in the water* and the *amount of water applied* to the area in question.

The carnationists' opportunity
 We are reminded of the rapid flight of time by the near approach of the Carnation Society meeting at Washington. Only three weeks away; and yet it seems but a few weeks since we said adieu to the hospitable Torontonians. No doubt the gathering at Washington will equal, if not exceed, any conclave of carnationists ever held. Anyone interested in the divine flower (and what florist is not) who volun-

tarily misses the opportunity presented in this Washington convention deserves to get left in the upward and onward movement which is carrying his more enterprising fellows to favor, fame and fortune, as he surely will if he continues unmindful of the advantages which others are eager to grasp. "Watch your opportunity."

Get "a move on" over and its real or fancied effect upon the floral and other horticultural interests is

Now that the financial flurry is apparently fully comprehended it remains for all concerned to get down to active business once more and, with old-time confidence and courage, lay foundations for the immediate future. We are not only at the beginning of a new year but, as many believe, on the threshold of a new and more healthy business development and now is the opportunity of a life-time—that "tide in the affairs of men which taken at the flood, leads on to fortune." Years hence men will look back to this juncture not so much as an emergency as an opportunity and they will designate by name the men who rose to the opportunity and improved it. It is no time now to mourn over the past or eringe at the imaginary future. Let every one get right into harness and do business at the old stand with double the old enthusiasm.

Helping one another

A promising sign of the times is the evident willingness of hitherto widely separated branches of horticultural industry to get together and work in unanimity in those directions where their interests are identical. We have had occasion to note this tendency in several recent instances—notably the Minnesota Horticultural Society, whose president in his annual address said that "the policy of our society is that of doing anything in a horticultural way that may be helpful to mankind," and the Maryland Horticultural Society under the guidance of such sterling men as Orlando Harrison, and Prof. Symonds—both societies representing strong fruit-growing communities but welcoming to full participation in the meetings and exhibitions the representatives of floriculture with a fraternal cordiality equalled only by the willingness and enthusiasm with which the latter entered upon their joint duties. The conditions which worked to segregate these interests in the past need not now be recounted; it is sufficient to know that we have outlived and largely overcome them and he who would seek to perpetuate them is no friend of horticulture. It is well that the distinctly divergent needs of the many sections of horticulture should be cared for by independent organizations. The more we have of these engaged in special work the better will fundamental details be attended to and the wider and deeper will the feeding roots of the great tree extend but there are many points of contact where union of effort will bring increased vigor and robust strength to horticulture in its broadest sense and we are glad to see things heading that way.

British Horticulture

RETROSPECTIVE

The year just closed was not altogether favorable to gardening operations, the weather at the early part of the summer being particularly trying. Despite these drawbacks, there are many satisfactory incidents to record, which indicate that the various departments of horticulture are making a steady progress. The Royal Horticultural Society continues to meet with encouraging success. The Society's various shows met with enthusiastic support both from the exhibitors and the public. A notable achievement has been the opening of new laboratories at the Society's extensive gardens at Wisley. This extension is likely to materially add to the Society's usefulness. The National Rose Society as is befitting an organization associated with the National flower, is making good headway. During the past year 577 new members have joined, whilst the membership has been doubled in a period of five years. The Society serves a useful purpose not only in organizing popular shows, but in the dissemination of valuable information amongst rosarians. The National Sweet Pea Society is also in the sunshine of prosperity. A new society has lately come into existence to cater for the sweet pea enthusiast in the Midland countries. The Winter Flowering Carnation Society judging from the success attending the last show, has come to stay. The British Gardeners' Association, formed to raise the status of the working gardener, is adding to its membership roll. The first number of its quarterly "Journal" has been brought out. Another useful move has been the federation of the horticultural Mutual Improvement Societies, under the auspices of the Royal Horticultural Society.

A BRITISHER ABROAD

Mr. W. Harrison, a member of the firm of Messrs. Harrison, Cragg and Harrison, market nurserymen, of Heston, Middlesex, has returned from a tour in the United States. He has lately recounted his experiences and incidents of his travels. Amongst his conclusions he states: "I think it is fair to say I have come back with a profound respect for the American's push and ability to get through, as well as his readiness to avail himself of the many labor-saving devices his intelligence and better education enable him to utilize." Mr. Harrison was considerably impressed by the fruit growing in Colorado, and the excellent system of co-operation adopted amongst the growers. He winds up by stating "I cannot conclude without acknowledging the heartiness and cordiality of my welcome from both eastern and western growers alike. I went out there expecting to be a stranger in a strange land; I left the country amazed and touched by the friendliness I experienced from every one. Instead of being a stranger I was treated as an honored guest, and I look forward with great eagerness to the time when I shall once again renew the many warm friendships I made during my visit to the other side." It is well that there should be these interchanges of visits. These not only widen one's experience, but remove the prejudices sometimes formed by an uninformed isolation. I am quite sure that should any American grower pay a return visit they would find a cordial welcome awaiting them on this side.

W. H. Adsett.

Royal Gardens, Kew

Being no halls to attend I turn my attention to the above, which if it be not should be the pride of every Britisher, for it is acknowledged to be the best and most complete establishment of its kind in Europe. It is not the time of year to see the various arboretums, or even to visit the beautiful rock garden, so will make my way at once to the show house, familiarly known as No. 4 to see what is there displayed. Its popularity is mainly through its being the gathering place of all subjects when they are flowering—or at least at their best from a decorative point of view, and therefore, there is no botanical exclusiveness in the denizens of the house, which in the summer often has alpine plants from the snow line of the Alps cheek by jowl with East Indian orchids and hardy but forced shrubs forming a background to forced bulbs in pots. It is here that the market florist often gets a useful hint of the practical value of a little known plant, and as the aim of Kew is to be as near as possible up to date here may be seen the novelties from Europe, and the cream of those from America, not to mention fresh introductions from our colonies either in the tropics, the southern archipelago, or simply from Australia, New Zealand, or Polynesia generally. Entering by the Cumberland gate, one could but note how green and fresh were the ferns under the shade of the trees. *Polystichum* I should call them but as usual that is not the Kew name—so in future I must call them *Aspidium*. Wisely, the *Hypericum calycinum* is freely used under trees as it soon carpets the ground and drip does not injure it. To add a little brightness some fine clumps of *Helleborus niger* were just opening their flowers—justifying its title of Xmas rose. A near way to No. 4 was through the houses devoted to cool orchids. The first thing that strikes one on entering No. 4 is a batch of plants of *Peristrophe speciosa* from the Himalaya. *Crassula lactea* was freely used along the edges of the stage. In the centre bed were specimens of late chrysanthemums. A pretty light-flowering sweet-scented thing is *Eupatorium Weinmannianum*. *Senecio Potasitis* is displaying some massive heads of its bright star-like flowers. Commanding notice here was an elegant fountain-like plant of *Buddleia Asiatica*, diffusing its delicious odor around: even if it fails to prove hardy, it will at any rate be a great gain in plants suitable for winter-garden decoration. The side benches had some very good *Primula sinensis*, Sutton's giant strain. Reading Blue is a true blue, and Giant White is a superb fringed flower of great substance. *Acacia platyptera* was the only one in good flower, *longifolia* coming along, while one pinnate leaved kind, with a very light and elegant habit of growth was labelled *Baileyana*, but was not yet flowering. *Luculia gratissima* was past, but a pretty batch of *Plumbago rosea* demonstrated that this variety is well adapted for pot culture and most useful at this season.

Plants of *Moschosma riparium* were dotted along the margin of the centre bed and were bearing many of their pretty flower spikes. *Begonia Lorraine*, *narcissi*, *cyclamens*, *nicotiana*, *Primula Kewensis* and such like well-known plants, made a very pretty display. A very fine winter flowering scarlet zonal *Polygonium* is Paul Crampel.

Thomas Buryard.

AFTER ADJOURNMENT.

January 28th, 29th and 30th. These are the dates for the carnation meeting at Washington. Patten up your pet seedlings, put them in the ring at Washington and you'll soon find out their "trotting" value.

Better flowers, better workmen, better system, are things much to be desired but let every florist also exert himself to devise better ways of using what we already have. There's plenty of room for improvement.

The road to success in floriculture is paved with industry, tenacity and that kind of enterprise which gets its stimulation from visiting the most successful establishments and the exhibitions and reading the best horticultural literature.

The growers whose roses or carnations are top-notch quality plumes himself upon his methods and good management but the one with low-grade product charges it to the weather, the late foreman or the man who sold him the stock.

It is to be hoped that the generally satisfactory conditions reported from most sections at holiday time may continue without impairment throughout the winter floral season. It would seem from the way the florist business has been sustained during the recent financial strain that plants and flowers and fancy greenhouse products of all kinds have graduated for good from the "luxury" class.

"Solomon was fain to admit that there were three things too wonderful for him; yea, four which he knew not: 'The way of an eagle in the air; the way of a serpent upon a rock; the way of a ship in the midst of the sea; and the way of a man with a maid.' Had Solomon lived till this day and generation he would have added a fifth puzzler, to wit: The way of an express company with a prepaid package."—*Phila. Record.*

And perchance a sixth: The way of a flower wholesaler with a fakir.

An announcement of the spring exhibition of the American Rose Society occupies the back cover page of the program and schedule of the American Carnation Society. That is the right sort of spirit. Let us have more of it.

"For a' that, an' a' that,
It's comin' yet for a' that,
That man to man the world o'er
Shall brethren be for a' that."

Fix up your show window. There are very few of these that cannot be improved and it is impossible to have them too well done. This does not mean extravagant and wasteful use of high-priced flowers but it does mean scrupulous cleanliness, simplicity and pure taste in arrangement, and resourceful proficiency in making effective use of the things most available at the time. Always combine beauty and utility.

Commenting on the New York Herald's estimate of \$1,750,000 as the amount spent by New Yorkers to give

HOUSE OF VIOLET "BOSTON."

appropriate welcome to the New Year, the *Philadelphia Record* says:

"No doubt this joyousness was in part due to the rebound from the depression of the last days of the old year. It is, however, a good symptom. To eat and drink so much may be a little provocative of indigestion, but it puts hoarded money in circulation and starts the wheels moving."

Very true, and, as we have said before, blessings on the good spenders. When America gets to wearing old shoes it will be a cold day for the florist and gardener.

In the light of the heavy supply of orchids for which the New York market could find no outlet at the Holidays that article published in the *New York Times* about the famine in orchids with famine prices ought to incite the fool-killer to load his gun and prepare to do business. "On Thursday night" it tells us "one of the dinner givers ordered orchids for table decorations. He took his chances and gave a carte blanche order. He found that the dinner and champagne were far less in price than the two dozen orchids, which nodded gracefully from their nests of maiden-hair fern. Then he appreciated the ravages of the orchid famine." This is the sort of ruinous rot which scares away business, leaves the wholesalers' ice-boxes full and gives the grower a cold chill.

The report of the Connecticut Agricultural Experiment Station on Fertilizers, for 1907, is interesting reading and should set the man who uses fertilizers to serious thinking. Many pages of analyses and valuations of special manures are given. We clip the following statement as being especially worth consideration by those growers who are in the habit of using the two mixtures analysed.

"Two samples of fertilizers made in England especially for florists' use were sent for analysis by Thos. W. Head, Groton, Conn.

No. 19275. Clay's Fertilizer for chrysanthemums and general flowering stock, imported in bags and tins, for sale at \$7.00 per hundred weight.

No. 19276. Thompson's Vine Ma-

nure imported in bags and sold for \$6.75 per hundred pounds.

	Thompson's Vine Fertilizer, No. 19275	Clay's Fertilizer, No. 19276
Nitrogen as ammonia	1.81	1.77
Nitrogen, organic	3.09	2.42
Nitrogen, total	4.90	4.19
Water-soluble phosphoric acid	0.08	5.46
Citrate-soluble phosphoric acid	1.50	1.54
Citrate-insoluble phosphoric acid	7.11	2.31
Total phosphoric acid	8.69	12.31
Water-soluble potash	0.18	7.31
Valuation per ton	\$23.43	\$32.80

No. 19276 apparently contained horn shavings. Nitrogenous superphosphates or specials can be bought here for from \$30 to \$35 which contain as much available plant food as these fertilizers which sell at preposterous prices."

PERSONAL.

Visiting Detroit: Mr. Holm of St. Paul, Minn.

George Ostertag has been re-appointed superintendent of parks at St. Louis for four years.

A. R. Cutting, editor of the *Canadian Florist*, Toronto, was married on January 1 to Miss Rita J. Revett of Chicago.

Visiting Boston: F. R. Pierson and J. R. Fotheringham of Tarrytown, N. Y., the latter just back from Europe.

Visitors in Newport, R. I.: Rickards Bros., New York, and John Beaton, representing R. & J. Farquhar & Co., Boston.

M. B. Bunker, florist, of Boston, was obliged to go to the Boothby Hospital on Wednesday, January 8, to undergo a painful operation.

Harry C. Hogan has been appointed gardener to Mr. Reginald Vanderbilt in Newport. Mr. Hogan was previously employed on the estate as foreman.

Mr. John Mahan, superintendent on the Auchincloss estate, was elected one of the license commissioners for the city of Newport, R. I., at the election last Monday.

AMERICAN CARNATION SOCIETY

The Seventeenth Annual Meeting and Exhibition of this Society will be held in the National Rifles Hall, 918 G street, N. W., Washington, D. C., January 28, 29 and 30, 1908. Exhibition on the first floor, sessions on the second floor. Address all exhibits to Chas. McCauley, Washington, D. C. Express charges on all exhibits must be prepaid.

Papers will be read as follows: "Experiments in Carnation Growing by the Department of Agriculture," by Dr. B. T. Galloway, Washington, D. C.; "Carnation Breeding," by Prof. J. B. Norton, Washington, D. C.; "What the buyer of a New Carnation should expect from The Originator," by S. S. Skidelsky, Philadelphia, Pa.; "What The Originator of a New Carnation should expect of the buyer," by W. N. Rudd, Mt. Greenwood, Ill.; "Special Points on Carnation Hybridizing," by Peter Fisher, Ellis, Mass.; C. W. Ward, Queens, N. Y.; Fred. Dorner, LaFayette, Ind., and Richard Witterstaetter, Cincinnati, O.; "Cultural Methods for Carnations," by Irving Gingrich, South Bend, Ind.

Exhibitions Rules and Regulations.

1. All entries must be forwarded so as to reach the secretary, Albert M. Herr, Lancaster, Pa., not later than Wednesday, January 15. Exhibitors from a distance will please note the date and mail accordingly, as a charge of \$1 for each variety entered will be made for those not entered as above requested.

2. All entries not staged by 1 P. M., January 28, will be disqualified from any and all competition excepting for "Certificate of Merit."

3. None but members of the Society are eligible to compete for any prizes, medals or certificates.

4. All exhibits for competition must have the variety correctly labeled, if a named sort, or numbered if an unnamed seedling. The Society will furnish a uniform card for this purpose, and varieties not labeled or numbered with this card will not be judged in any of the classes. The secretary will typewrite these cards for exhibitors who get their entries in early enough for him to do it, and furnish them to the exhibitor in Washington any time during the morning of January 28.

5. The same vase is not allowed to compete for more than one prize, excepting those entered for Certificates and where otherwise stated.

Scale of Points.

This scale shall be employed in judging all seedlings for Certificate of Merit, or for any special prize, and in all classes where competition is close, it shall be used to arrive at a decision: Color, 25; size, 20; calyx, 5; stem, 20; substance, 10; form, 15; fragrance, 5; total, 100.

Rules Governing the Award of Certificates of Merit.

A variety must have been bloomed not less than three years; not less than fifty blooms must be shown, and an entrance fee of \$5.00 is charged for each variety. The variety must be properly

labeled with the Society's Card. (See Rules and Regulations.)

Preliminary Certificate.

This can be competed for by two-year-old seedlings, twelve blooms or more to be shown, and an entrance fee of \$2.00 paid for each variety. The variety must be properly labeled with the Society's Card. (See Rules and Regulations.)

General Premiums.

Class A.—Open to all varieties, Seedlings or Standard Sorts:—

No.	100 Blooms	First Prize.	Second Prize.
1.	White	\$10.00	\$5.00
2.	Enchantress shade of Pink	10.00	6.00
3.	Lawson shade of Pink	10.00	6.00
4.	Winsor shade of Pink	10.00	6.00
5.	Scarlet	10.00	6.00
6.	Crimson	10.00	6.00
7.	Yellow Variegated	10.00	6.00
8.	White Variegated	10.00	6.00
9.	Any other color	10.00	6.00

Class B.—Open to all varieties disseminated prior to July 1st, 1907:—

Classes No. 10 to No. 36, each for a first prize of \$5.00, and second prize of \$3.00 for fifty blooms of the following varieties respectively: Lady Bountiful, White Perfection, any other White, Enchantress, any other Enchantress shade of Pink, Winsor, Pink Enchantress, any other Pink (this shade), Lawson, Aristocrat, Pink Imperial, any other Dark Pink, Robert Craig, Red Chief, Victory, Beacon, any other Scarlet, M. A. Patten, Imperial, any other White Variegated, Harry Penn, Harlowarden, Any other Crimson, Eldorado, Any other Yellow Variegated, Prosperity, Any other Color. Three prizes may be awarded under No. 36.

The American Carnation Society Medal.

Class C.: A gold medal will be given for the best vase of 100 blooms, any variety, any color.

A silver medal will be given for the second best vase of 100 blooms, any variety, any color.

A bronze medal will be given for the third best vase of 100 blooms, any variety, any color.

Special Medals of the Society of American Florists.

Class D.: A silver medal will be awarded for the best vase of 50 blooms of carnations not yet disseminated.

A bronze medal will be given for the second best vase of 50 blooms of carnations not yet disseminated.

The variety to be in all cases of American origin.

Judges are to reserve awards in this class if in their opinion the exhibits are not worthy of the medals.

Special Prizes.

The Henry F. Michell Co., Philadelphia, Pa., offer a silver vase valued at \$40.00 for the best 100 blooms of carnations in four varieties, twenty-five blooms to a variety. Open to private gardeners only.

Peter Bisset, Washington, D. C., offers \$10.00 in gold for the best display of carnations grown by a private gardener distinct from Michell's prize.

Peter Fisher, Ellis, Mass., offers

prizes for the best fifty blooms of Beacon: 1st, \$12.00; 2nd, \$8.00; 3rd, \$5.00.

Geo. H. Cooke, Washington, D. C., offers \$10 in gold for the best 25 blooms pink seedling or sport darker than Enchantress and lighter than Lawson, never before winning a prize or medal. Those having a preliminary certificate eligible. Entries for this prize will not be eligible to compete for any other prize.

Geo. C. Shaffer, Washington, D. C., offers \$10 in gold for the best vase of 50 blooms, not more than three varieties, open only to growers having less than 20,000 feet of glass.

S. C. Briggs, Washington, D. C., offers \$10 in gold for the best vase of white carnations, 50 blooms, distinct from other entries.

John Robertson, Washington, D. C., offers \$5 cash for best 25 blooms of Winsor, distinct from other entries.

Mr. J. J. Harty, Washington, D. C., offers a silver cup to the exhibitor making the largest display—all vases in all classes being counted as part of this display.

Z. D. Blackistone, Washington, D. C., offers \$10 in gold for the best 50 blooms of white carnations, distinct from other entries.

C. A. Goldsmith, jeweler, Washington, D. C., offers a cup or stein for the best 50 blooms of red—new or standard variety. Vases for this prize not to be entered in any other class. Red meaning Beacon, Victory or Craig shade of red.

Headquarters.

Hotel Raleigh will be headquarters. It is a first class hotel and can accommodate all members who wish to stop there. The rate is from \$2 per day upward.

Officers for 1907-'08.

President, Fred Lemon, Richmond, Ind.; vice-president, Peter Bisset, Washington, D. C.; secretary, Albert M. Herr, Lancaster, Pa.; treasurer, Fred. Dorner, Jr., Lafayette, Ind.; directors, Fred Lemon, Peter Bisset, Albert M. Herr, Fred. Dorner, Jr., Wm. Weber, Wm. Gammage, J. S. Wilson, J. F. Wilcox, Eugene Dailedouze.

On Wednesday evening, January 15th, the Tarrytown Horticultural Society will enjoy its annual dinner at the Florence Hotel. There will be "hospitality sitting with gladness" and then will come "Discourse, the sweeter banquet of the mind." The latching string will be out as usual.

NEWS OF THE CLUBS AND SOCIETIES.

WESTERN NEW YORK HORTICULTURAL SOCIETY.

The 53rd annual meeting of the Western New York Horticultural Society will be held in the Eureka Club building, Rochester, January 22nd and 23rd. The programme follows:

Wednesday, Jan. 22 10:30 a. m., appointment of committees, report of secretary-treasurer, trustees of permanent fund, state fair exhibit F. E. Rupert, chairman, committee on preservation of the pomological history of N. Y. state; Prof. John Craig, chairman, committee on botany and plant diseases; Prof. F. C. Stewart, N. Y. Agricultural Experiment Station.

Afternoon session, 2 o'clock: "Twenty-five Years of Experiment Station Work," Dr. W. H. Jordan, N. Y. Agricultural Experiment Station; "Are We Planting Enough Varieties?" Wm. A. Taylor, U. S. Dept. of Agriculture; "Tillage vs. the Sod-Mulch," Prof. U. P. Hedrick, N. Y. Agricultural Experiment Station; "Co-operation in the Packing and Marketing of Orchard Fruits," M. C. Burritt, College of Agriculture, Cornell University; "Atmospheric Nitrogen as a Future Commercial Source of Plant Food," Dr. L. L. Van Slyke, N. Y. Experiment Station; "Progress of Inspection Work with Apples," Prof. John Craig, Ithaca, N. Y.; Report of Legislative Committee, S. D. Willard, chairman; a few words relative to fruit packing, by Prof. Lowell Judson, College of Agriculture, Cornell University.

Evening session, 7:30 o'clock.—"Some Observation on Fruit Insects," Prof. P. J. Parrott, N. Y. Experiment Station; "Relation of Birds to Horticulture," Prof. Howard E. Eaton, Canandaigua, N. Y.; Discussion.

Thursday, Jan. 23rd, 9:30 A. M.—Members' hour, conducted by Geo. T. Powell, Ghent, N. Y.; "Planting and Caring for a Peach Orchard," S. H. Fulton, Sleepy Creek, W. Va.; Report of committee on nominations; Election of officers; "Dwarf Apple Trees in Commercial Orchards, and the Value and Possibilities in Dwarfing Standard Trees Through Special Means of Pruning," George T. Powell, Ghent, N. Y.; "Small Fruit Culture," W. W. Farnsworth, Waterville, Ohio.

Afternoon session, 2 o'clock.—Members' hour for discussion of special questions; Report of committee on fruit exhibit at this meeting; Unfinished and new business; Report of committee on resolutions; Discussion of questions for balance of session.

Practical addresses by practical men for practical fruit growers, is the keynote running all through the programme. One other great attraction connected with this gathering is the exhibition of choice fruit. Not less than a thousand square feet of space will be required for the display. The State Experiment Station will use one-half to three-fourths of the space. Many of the addresses will be illustrated with stereopticon views. This makes a combination of entertainment and instruction.

WORCESTER COUNTY HORTICULTURAL SOCIETY.

The winter program of meetings at Horticultural Hall, Worcester, Mass., is as follows:

Thursday, Jan. 2—"Maintaining Soil Fertility," by Prof. L. A. Clinton, director of Storrs Agricultural Experiment Station of Connecticut; Thursday, Jan. 9—"Italian Gardens," illustrated by stereopticon, John Farquhar of Boston; Thursday, Jan. 16—"Improvement of Vegetables by Selection and Hybridization," M. F. Hall, horticulturist at the New Hampshire college; Thursday, Jan. 23—"Embellishment of Streets and Waysides by the Planting of Trees," J. A. Pettigrew, department of parks, Boston; Thursday, Jan. 30—"Children's Home Gardens," O. A. Morton, superintendent of schools, Marlboro.

Thursday, Feb. 6—"Rural Life," Joseph K. Greene of Worcester; Thursday, Feb. 13—"Ladies' day. Music, and Mrs. George S. Ladd will speak on the "Influence of Horticulture." Mrs. David L. Fiske on "Practical Horticulture," and Mrs. Sarah E. Brown on "Aesthetic Horticulture"; Thursday, Feb. 20—"A Campaign for Rural Progress," Kenyon L. Butterfield, president of the Massachusetts Agricultural College; Thursday, Feb. 27—"Forestry," Philip W. Ayres of Concord, N. H., forester for the Society for the Protection of New Hampshire Forests.

Thursday, March 5—Subject and speakers to be announced; Wednesday, March 11—Annual reunion of the society; March 11 and 12—Massachusetts Fruit Growers' convention; Thursday, March 12—"How Can We Develop Commercial Orcharding in Massachusetts," F. C. Sears, pomologist at Massachusetts Agricultural college.

The program was arranged by President George Calvin Rice, Secretary Adin A. Hixon, Arthur J. Marble, Edward W. Breed, J. Lewis Ellsworth and Charles W. Wood, committee on winter meetings.

NORTH SHORE HORTICULTURAL SOCIETY.

This society held its regular meeting January 3rd. In the absence of Pres. McGregor, the chair was occupied by Vice-President Thomas Jack. Reports from officers for 1907 were read and accepted, the treasurer and financial secretary's report showing the society to be in a flourishing condition with an increase in finance and membership. The annual election of officers followed, resulting as follows for 1908: President, William Till; vice-president, A. E. Parsons; treasurer, John Baker; financial secretary, Herbert Shaw; recording secretary, James Salter; executive committee, Philemon Sanborn, J. B. Dow, Joseph Clark, Sr., W. H. Tyler, James McGregor.

In accepting the chair, the president thanked the members for their confidence and stated that he would not make or advocate any radical change in the policy of the society.

The annual banquet will be held in Manchester Town Hall, January 29, at 1:30 P. M. W. T.

NEW JERSEY FLORICULTURAL SOCIETY.

The installation of the following officers took place on the 3d instant with the usual ceremony. President Malcolm MacKorie; vice-president, Henry Halbig; secretary, Orson A. Miller; treasurer, William Read. After discussion it was decided to hold special public exhibitions of carnations, roses, dahlias and chrysanthemums and offer special inducements for flowers in season at the regular monthly meetings.

In the competition for 1907 the following winners of prizes were announced: 1st, Peter Duff, gardener for John Crosby Brown; 2nd, William Read, gardener for the Colgate Estate; 3d, Max Schneider, gardener for Chas. Hathaway; and in the special class for growers without glass, Arthur T. Caparn, gardener for Stewart Hartshorne. Among the non-competitive awards certificates were given to F. R. Pierson Co., Lager & Hurrell, Julius Roehrs Company, W. A. Manda, Robert Scott, Thomas Jones, Joseph A. Manda, J. C. Williams and Henry Hornacker. Cash prizes aggregating forty dollars were donated by the following: Peter Henderson Company, J. M. Thorburn & Co., Vaughan's Seed store and F. R. Pierson Co.

In the floral display for the evening, orchids preponderated. *Cypripedium Leeanum Clinkaburyanum*, the finest form of this genus in existence and *Cypripedium insigne Luciana*, the yellow form, by Lager & Hurrell; four vases of cut blooms of *Cattleya Trianae alba* of several distinct forms, by Thomas Jones; *Epidendrum lonopsis* and *Cypripedium Leeanum Clinkaburyanum* by Orson A. Miller of East Orange, the new secretary, who has come out as a grower for the trade and is now in active competition with "Willowmead" of the same place. All of these growers promise to revive during the present year, the old latent partiality for the *cypripedium* claiming that it is still alive though dormant. Joseph A. Manda of West Orange, contributed a vase of *Anthurium Andreanum giganteum*; roses from the estate of Douglas Robinson, John Garvan, gardener, and violets from Charles Hathaway, Max Schneider, gardener. An invitation from the Morris County Gardeners to their smoker on the 8th was read and a committee appointed to go there. Satisfactory reports were received from secretary and treasurer.

JOSEPH B. DAVIS.

SOUTHAMPTON (L. I.) HORTICULTURAL SOCIETY.

The first annual meeting of this society was held on Thursday, January 2, President Clark in the chair. Officers elected for the ensuing year were as follows: President, H. W. Clark; vice-president, Wm. T. Halsey; recording secretary, E. C. Palmer; financial secretary, Charles Gillouz, in place of Wm. Gray, resigned; treasurer, Julius King. The appointment of the execu-

five committee was held over till the next meeting. There were the usual interesting discussions, the principal one being the construction, care and management of lawns, which subject was very ably discussed by Messrs. Frankenbach and Palmer. The next regular meeting will be held Jan. 23; subject, "Pruning of Trees and Shrubs." U. G. AGER.

MASSACHUSETTS HORTICULTURAL SOCIETY.

There was a good attendance of members at the inaugural meeting of the Massachusetts Horticultural Society, which was held in the lecture hall of the building at noon on January 4.

President Stephen M. Weld occupied the chair and in his inaugural address he said that as a means of increasing the society's income certain improvements might be made in the halls to make them more sought after by tenants. Reference was made to the decoration of one of the halls at a cost of \$1000, which seems to have accomplished its purpose. A committee now has under consideration other changes.

The exhibitions of the year have been of a high standard of excellence. Referring to the last chrysanthemum show, President Weld said the show was hardly as full and complete as had been hoped for, but that measures are under way to insure a greater exhibition than ever next fall. He criticized the last show mildly as being incomplete in its display of chrysanthemums.

Reference was made to a strong difference of opinion existing among the members as to whether cash prizes or medals and vases are most conducive to the horticultural spirit. The president suggested that the matter be given careful consideration. The lectures are of increasing interest and their publication has increased their influence. The interest in horticulture seems to be growing everywhere. It was suggested that the society offer prizes for the plantation of trees, and that idle land be used for this purpose. Relative to the danger to woodland from fire, there should be a more vigorous enforcement of present laws.

Hon. William C. Strong, delegate to the Pomological Convention held at the Jamestown Exposition, reported a good attendance from different parts of the country. A prominent topic for reports and consideration at the convention was the breeding of new varieties by cross-fertilization.

Wilfrid Wheeler reported for the committee on fruit, and stated that the past year was an especially good one for apples, not so much as regards quantity as quality; there was an unusually large crop of strawberries, but not as many pears as usual. Peaches were almost a total failure. Mr. Wheeler recommended that grapes be cultivated more extensively, as they will thrive in almost any soil.

William H. Spooner reported for the State Board of Agriculture to which he was a delegate. Mr. Locke, for the committee on vegetables, gave an encouraging report of the year's developments. Mr. Rich, for the committee on plants and flowers, stated that 617 awards aggregating \$2764 had been made during the year. Numerous other committees also made reports.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Executive Board Meeting.

Pursuant to call by President Stewart, the executive committee met in special session at Horticultural Hall, Philadelphia, on December 28th. There were present Messrs. Stewart, Elliot, Kasting, Westcott, Beatty, Farquhar, Traendly, Hallock and Rudd. The president appointed Messrs. Robt. Craig and Wm. F. Gude to act in the place of Messrs. Wirth and Murray, who were not present. The president announced that he had appointed W. N. Rudd as secretary to the society, in accordance with the by-laws, to fill the vacancy caused by the death of P. J. Hauswirth, which action was approved by the committee.

President Stewart prefaced his formal announcements of the business before the meeting by a few words, setting forth most feelingly the loss which had been sustained by the society and by the trade at large, through the death of P. J. Hauswirth, and on motion a committee consisting of W. F. Kasting, Frank H. Traendly and Wm. F. Gude was appointed to draw up resolutions, which committee later on presented the following report, which was adopted:

Whereas, We, the Executive Committee of the S. A. F. & O. H., in special session assembled in the city of Philadelphia, Pa., this 28th day of Dec. 1907, have learned of the sad death of our beloved secretary, which occurred in the city of Chicago, on Dec. 4th, 1907; therefore, be it

Resolved, By the Executive Committee of the S. A. F. & O. H., that in the death of Mr. Hauswirth the Society has lost a good worker and a loyal friend.

His motto always was the greatest good to the greatest number, and best interests of all concerned. For time and ability freely given to the best interest of our Society, he stood without a peer. With him the common good was always first; he was ever ready to sacrifice his own interests for those of others. If he had a fault, it was that in his generosity he sacrificed his own interests too much. For time freely given in the best interests of this Society and for the welfare of Horticulture at large, we are indebted beyond expression.

As an acknowledgment of this debt and as a token of grief we feel at his sad death, these resolutions are to be spread upon the records of this Society and a copy sent to his bereaved family.

Signed W. F. KASTING,
FRANK H. TRAENDLY,
WM. F. GUDE.

The president stated that there was a net balance of the society's funds in the hands of the estate of the late secretary amounting to approximately \$1500, and that the family were ready to turn this sum over, but under the advice of their attorney, had asked that a complete check of all society matters, which had been in his hands, should be made in order that there should be no uncertainty. The secretary had deemed this also an eminently proper course to pursue, so that any fears on the part of members of the society, arising through groundless rumors which always are circulated in such unfortunate cases, may be set at rest beyond peradventure.

At the afternoon session Mr. Farquhar was unable to be present, and the president appointed Edwin Lonsdale

to take his place. On motion of Mr. Kasting the flower show committee was authorized to use for awards at the National Flower Show to be held in Chicago, November, 1908, ten silver gilt medals, 25 silver medals, 25 bronze medals, and as many certificates of merit as would be needed for worthy subjects there shown.

The thanks of the members of the committee were then formally tendered to President Stewart for his long services as secretary and president of the Society of American Florists and Ornamental Horticulturists.

President Traendly has appointed Mr. E. V. Hallock of Queens, N. Y., as director, to fill the vacancy on the executive board of the S. A. F. & O. H., occasioned by Mr. Traendly's election as president.

Seed Trade

The executive committee of the American Seed Trade Association will meet at the Auditorium, Chicago, January 21.

James J. H. Gregory has transferred his seed business at Marblehead, Mass., to his son, Edgar. Mr. Gregory, Sr., is now in his eightieth year.

We mentioned in seed trade notes last week Mr. O. K. Natt. There is no such gentleman; the name is P. K. Nott. "A rose by any other name would smell as sweet."

CATALOGUES RECEIVED.

W. W. Barnard Co., Chicago.—Preliminary List of Florists' Flower Seeds for Early Sowing.

G. S. Crego, Maywood, Ill.—Illustrated folder of the Crego aster, which is described as "the best aster in the market."

Pacific Nurseries, F. Ludemann, Prop., San Francisco, Cal.—Catalogue and Price-list, 1907-1908. A very explicit list of plants, tender and hardy.

W. W. Johnson & Son, Boston, England.—List of novelties and specialties, with wholesale prices to the trade. Vegetable and flower seeds are included.

Haskell Avenue Floral Company, Dallas, Texas.—Roses and Plants for the South. Fills the bill. Colored illustration of Meteor rose adorns the first cover page.

James Vick's Sons, Rochester, N. Y.—Vicks' Garden and Floral Guide, 1908. Chock full, as usual, with good material. The front cover illustration is a trio of Vicks' famed asters in colors.

Conard & Jones Co., West Grove, Pa.—New Floral Guide for 1908. Rose illustrations in colors on cover. This catalogue not only lists roses but a general line of tender and hardy plants.

Felix & Dykhuis, Boskoop, Holland.—Wholesale Catalogue of specialties for nurserymen and landscape architects. Also "The Paeonia," a descriptive list of over three hundred varieties of P. sinensis, phloxes, irises, etc.

California Nursery Company, Niles, Cal.—Catalogues and Price-list of Fruit and Ornamental Trees, Palms, Roses, etc., for 1907-1908. This company has 500 acres under cultivation and the present is the 23rd edition of their catalogue.

Sluis & Groot, Enkhuizen, Holland.—

General Wholesale Price-list of Vegetable, Flower and Agricultural Seeds. Includes a colored plate of Tropaeolum Lobbianum Queen Wilhelmina; flowers scarlet and foliage creamy-white, marbled and veined.

W. E. Marshall & Co., New York City.—Seed Catalogue for Spring, 1908. The Countess of Lonsdale dahlia forms the first cover page illustration, and Black Valentine bean the last. The contents are comprehensive and include a good novelty list.

A. Mitting, Santa Cruz, Cal.—Wholesale Price-list for Florists and Nurserymen. Frontispiece, a cut of Superlative raspberry, a European introduction said to produce berries three times as large as any known raspberry and to be a continuous cropper.

Henry F. Michell Co., Philadelphia, Pa.—1908 Wholesale Catalogue for Florists and Market Gardeners. This has the characteristic Michell business ring in every one of its fifty pages, and the florist or market gardener who does not send for a copy should be fined.

W. W. Rawson & Co., Boston.—Garden Manual for 1908. A belle toying with a bunch of Canterbury Bells for the edification of an elderly gentleman in the window, forms an expressive frontispiece. The book is a McFarland production which sufficiently fixes its merit as a typographical and pictorial attraction.

David Herbert & Son, Atco, N. J.—1908 Descriptive Catalogue of Dahlias, for seedsmen, florists, nurserymen and dealers. This is a very desirable list for those who wish to learn about the new and rare varieties and the best of the standard sorts. The collection represented is undoubtedly the largest in this country.

W. Atlee Burpee & Co., Philadelphia, Pa.—Burpee's Farm Annual, containing "the plain truth about the best seeds that grow." Unique New Fordhook Bush Lima Bean distinguishes the front and a group of brilliant sweet peas the back cover page. Spencer sweet peas, new nasturtiums, Fordhook musk melon and Wayahead lettuce are the subjects of colored inserts.

J. M. Thorburn & Co., New York City.—Seed Catalogue, 1908. A high-class catalogue in every respect. The cuts are beautiful and the arrangement of the text convenient, creditable alike to compiler and printer. The light, creamy brown cover is embossed, the first page showing a garland of asters in colors and the last page a cluster of

carnations. Thorburn's Trade List comes by same mail. It is a business proposition from cover to cover.

H. A. Dreer, Inc., Phila., Pa.—Dreer's Garden Book, 1838-1908.—This is the seventieth anniversary edition of this old but ever young friend of the flower and garden lover. No attempt at sensational effect is made on the covers, which are dark green with no ornament other than the inscription in gold embossed letters, but there are four handsome colored inserts—garden vegetables, pansies, cannas and paeonies respectively—and the pages are well filled with readable descriptive matter as usual.

"Everything for the Garden," by Peter Henderson & Co., New York, is

an annually welcome visitor to our desk. The edition for 1908, just received, is if possible better than any of its predecessors, every square inch of space filled with illustration or descriptive matter calculated to make the average mortal yearn for the spring time to come and the privilege of filling out the order sheet. The cover is white with gold embossed letters and, apparently seen through a lattice work, is a garden scene in bright colors, a very effective arrangement.

Kelway & Son, Langport, Somerset, England.—Kelway's Manual of Horticulture, for 1907-1908. This volume of four hundred pages, the largest publication of its class which we have seen, is teeming with interesting reading matter and superbly illustrated. A lovely colored plate of herbaceous paeony Queen Alexandra forms the frontispiece. A group of new delphiniums is the subject of another colored illustration. This useful book is a Manual in fact, and will be found invaluable especially by the lover of hardy herbaceous plants. Messrs. Kelway are to be complimented on their enterprise in sending out so fine a work.

FLORIST CLUB OF PHILADELPHIA.

The monthly meeting of this club held on the 7th inst. was notable for the excellent exhibits of new roses and carnations. R. Witterstaetter staged a fine vase of carnation Afterglow; Fred Dorner, Sons & Co., sent fifty blooms of Winona, a light rose, showing great promise. John E. Haines was on hand with Imperial, Pink Imperial and a number of new seedlings. John Kuhn showed his new dark pink seedling. In roses the Rhea Reid from E. G. Hill Co. was conspicuous. Robert Scott & Sons sent a fine vase of their new star, Mrs. Jardine. From Poehlman Bros. came Mrs. Potter Palmer, the first time this variety has been exhibited here. Adolph Farenwald sent his new Aurora, a cross between Carnot and Bon Silene, something after the form and color of Chateau; Kate Moulton showing excellent culture, and a lot of Killarneys; the latter, however, had to take a back seat when compared with the magnificent blooms of the same variety from the Waban Rose Conservatories. Mr. Farenwald thinks the soil, or climate, or both, around Boston must have something to do with the superiority of the Killarneys grown there. Mr. Fancourt explained to the members that the Waban Killarneys were the ordinary flowers as sent to market, and had not been grown or selected specially for exhibition. Myers and Samtman sent their new pink, Wyndmoor, and Mr. Samtman was kept busy explaining its origin and merits. Bruno Schroeter of Detroit exhibited a grand lot of White Enchantress carnation, and a new white snapdragon, both showing excellent culture. S. S. Skidelsky was the essayist of the evening, his subject being "Competition—Fair and Foul," which he handled in his usual able and scholarly manner. The next meeting, first Tuesday of February, will be devoted specially to the carnation. Exhibits are requested.

FLORISTS' CLUB OF WASHINGTON.

The regular monthly meeting was held at Gude's Hall on the night of Jan. 7th inst. This is the first time that Pres. Bisset has presided at a meeting since his return from Porto Rico, and all were more than glad to find him so much improved in health. The chief subject of interest was the approaching carnation show. The meetings will be held at National Rifles Armory, but the final details have not been perfected, and there will be a special meeting called beforehand to settle all minor matters. Jan. 29th will be known as "Carnation Day" and all growers of carnations are earnestly requested to donate flowers as there will be 25,000 of them given away on that day. On the afternoon of the 30th it is purposed, if possible, to have a drill by the artillery and cavalry at Fort Myer in honor of the visiting florists. On the evening of the 30th there will be a banquet. Suitable resolutions were drawn up on the death of John Clark, who with his entire family recently perished in a fire in his home in Watertown, Mass. A copy of the resolutions will be sent

his father, John T. Clark, who has a position at Botanic Gardens.

Mr. Burns, of Agricultural Department, had on exhibition about two dozen fine seedling carnations, which were favorably received.

CLUB AND SOCIETY NOTES.

The annual meeting of the Southern Minnesota Horticultural Society will be held at Albert Lea, January 14-15.

At the annual meeting of the Minnesota State Agricultural Society, to be held at St. Paul January 14-16, about \$500 will be offered as premiums for the best displays of grain seed.

The Toledo Florists' Club meeting on December 26th had a holiday attendance and no business of note was accomplished, but a jolly good time was had among those who were there.

The inaugural meeting of the New York Florists' Club will be held on Monday evening, January 13. It will be a brilliant gathering. All the nobility and talent of the club will be present to see President Weathered grasp the gavel.

On Tuesday evening, January 21, the Gardeners' and Florists' Club of Boston will hold Ladies' Night. President Westwood has set his heart on making this a memorable event and the committee in charge are unanimously of the same mind, and that settles it.

NEWS NOTES.

At the recent exhibition of the Winter Flowering Carnation Society in London, England, carnation Aristocrat was awarded first prize in the deep-pink class.

The Daily News, of Newport, R. I., has published several articles recently on the subject of children's school gardens, and all of them have the proper ring.

Stump & Walter Co., New York, are sending out a folder telling about the Auto-Spray with which they say everybody ought to spray. Now is a good time to buy this excellent sprayer.

J. L. Loose of Alexandria, Va., has recovered \$20,000 damages from the Southern Railway Company for the destruction of plants and flowers by smoke issuing from the defendant's premises.

NEWS NOTES.

D. H. Maggart of Salem, Ore., has started in the florist business at Elmhurst, Cal.

Albert Zepf has returned to Vincennes, Ind., and will start in the florist business there.

It is stated that the Braidwood Floral Co. of Colorado Springs, Colo., is in financial difficulties.

The tournament of roses was held at Pasadena, Cal., Jan. 1. It is said that 50,000 visitors were present.

The Longview Floral Co. is the name of a new concern starting in business at 2520 Elma avenue, Kansas City, Mo.

A. E. Lemke, florist, St. Paul, Minn., has filed a petition in bankruptcy. A meeting of creditors was held on Jan. 3.

Fire, which evidently originated in the boiler room, destroyed the small greenhouse and other property belonging to James Dennington, Bridgeton, N. J., on Dec. 31. The loss is about \$400.

D. J. Mackintosh, 1144 Broadway, New York, has filed a petition in bankruptcy; liabilities, \$8,780; assets, \$4,496, including about \$3,500 in uncollectable accounts.

FLOWER MARKET REPORTS

BOSTON Quiet prevails in the business here since New Year's, and on some lines accumulations are imminent. Taking the leading specialties in order, it may be said that roses are not overplentiful, and all varieties and grades find a fair sale excepting high-grade American Beauties, which in the presence of high-grade Richmonds at one half the traditional Beauty price have to take a back seat, and it does look as though the Beauty was definitely slated for lower prices henceforth. Carnations have shifted their lines and it is no longer the bright colored sorts but the whites that hold precedence. Violets are plentiful and are moving rather reluctantly. All bulbous stock is slow and accumulating in wholesalers' hands. Some yellow narcissi are in and sell at \$2.00 to \$3.00 per 100 when a buyer shows up, but Paper White at its worst sells in the proportion of ten to one as compared with the yellow trumpets at this early date. Lily of the valley is still in the dumps. Too many are being grown for this market at present.

BUFFALO Trade was rather quiet the past week; in fact very little doing. Had it not been for a sprinkling of floral work and one or two pink teas the florists would have had a winter vacation. Stock has not been too plentiful, though enough so to fill all orders. Sweet peas have been a little short in supply and the same may be said of Beauties, the quality being fine. All bulbous stock is in good supply.

DETROIT Truly a great finish for the old year, is the only way local business conditions can be described. Every scrap of flower found its purchaser. As the end so was the whole of 1907—good prices, no surplus stock, and a regular demand were the principal characteristics of 1907, and if anyone did not fully realize and get all the good there was in it he must blame more himself than any other agency. We are fortunate here in not being bothered with any serious price cutting and what little there was was entirely un-called for, but such will be always more or less. Several fakery tried this trick here, but a scant supply and less demand caused them to withdraw as poorer but wiser men. In the

better stores carnations find easy sales at \$1.50 to \$2.00 per doz. Roses retail from \$2.00 to \$12.00 for best American Beauties and violets at \$3.00 to \$4.00 per hundred.

INDIANAPOLIS Since Christmas there has been a fairly steady demand and the total of sales has been satisfactory. The supplies of stock have been such that prices were not maintained as they usually are between the holidays. Beauties and teas are of good quality but not in extra heavy supply. Carnations are abundant and of splendid quality. Unless we get too much dark weather there is not apt to be any shortage of stock in most lines as long-delayed crops seem to be on. There was a good demand for violets at New Year's which were of good quality. All requirements can be now met with in lilies, lilacs, lily of the valley and bulbous stock in general. Paper Whites seem to be a glut and are selling below the market price. Sweet peas, daffodils and tulips sell well but are to be had in limited quantities only. New Year's did not develop any special demand and as to trade will compare favorably with last year.

NEW YORK Business in the wholesale district is very slow and prices are falling daily. No special flower seems to have much lead in the demand, all suffering more or less from the inactivity which has prevailed since New Year's. Bulbous stock and lily of the valley are perhaps in poorest luck and all green goods keep them company. The drop in values since New Year's averages about 25 to 35 per cent. The drop was not immediate but has been gradual from day to day. A renewal of activity will be most welcome and it cannot come too soon.

PHILADELPHIA A shortening up of receipts helped the situation here considerably last week. The cooler weather has had a very good effect all round, especially in the rose crops. Carnations have not been affected to quite the same extent. But, generally speaking, a much better tone prevails. While American Beauty is in shorter supply there is still plenty for demand. Brides and Bridesmaids show decided improvement as to quality, the flowers

being much firmer, heavier and of better color. Campbell and Princess remain the leaders in violets. The lily of the valley market has improved a little and has now some snap to it. The only change in the orchid situation is the advent of some very fine shipments of *Cypripedium Leeatum*.

TOLEDO Christmas and New Year's business was about the same as last year. Where the florists in the better neighborhoods did more business, those in the working quarters did less, as a good many factory hands had been out of work for several weeks. Flowers were not over plentiful and more could have been used; everything was cleaned out nicely. Our stores were all fairly well decorated, but nothing very elaborate. The only flower that did not sell as expected for Christmas was the poinsettia, but they went off nicely after Christmas. Carnations are now more plentiful and quality is good; roses are not grown largely here, but what there are show good quality.

WASHINGTON A terrific wind, rain and sleet storm held Washington in an icy clutch for more than twelve hours on Jan. 7th. Cloudy weather followed, which has been a menace to the crops. Everything in the cut flower line is scarce and in great demand, and prices keep up. Everywhere the working force is diminished by grippe, which has been a dreadful epidemic in Washington since two weeks before the holidays. We hope that the present year which has just been ushered in has pleasanter and healthier things in store for us all at a very early date.

BUSINESS CHANGES.

The Simon greenhouses at Easton, Pa., have been leased by Fred Munz.

Mrs. Scallen is carrying on the business, formerly of Charles Scallen, at 42d St. and Broadway, New York, which was recently disposed of by sheriff's sale.

A PROFITABLE ASTER.

A new industry for the fruit grower and poultryman and small farmer as well, is the aster culture, especially that of the new improved variety recently developed and introduced by The Scientific Special Crops Intense Culture Ranch of Elmhurst, Ill. Mr. E. A. Kibbe, the originator, gives the following interesting information regarding this aster which appears in the accompanying illustration.

"This improved aster is of the chrysanthemum type, being unlike all other varieties of asters heretofore produced. It is of the Burbank strain; its name is the Lady Roosevelt. The flowers are of unusual size, 4 1-2 and 4 3-4 in. in diameter, borne on stems of a very stiff, wiry nature 36 in. in length. They were sold this past season at wholesale at \$1.00 per doz. net, bringing more than double the price an aster was ever before marketed at, thus enabling the grower to realize at the rate of \$8000 per acre and over. As aster blooms can be shipped 2000 miles without deterioration, and can be grown as successfully by an amateur as an experienced gardener, no greenhouse or hotbed required, it is a very commendable crop to cultivate."

The company issues an illustrated folder for free distribution.

WANTS, FOR SALE, ETC.

FOR SALE—2000 feet second-hand 4 inch cast iron pipe with fittings. In perfect condition. Apply to T., care Horticulture Pub. Co.

GOOD RESULTS OF INSPECTION LAWS.

Statistics compiled by A. F. Crowell, deputy state horticultural commissioner, show the value of fruit produced in Spokane county, Washington, to be \$2,894,165, of which the apple crop netted \$1,827,065. This latter estimate is based on acreage of trees and the selling price of the Ben Davis variety, the cheapest grade in the Northwest. The apple crop of the State of Washington is valued at \$10,000,000. The prune crop was the second in value in Spokane county, bringing \$47,600, strawberries netted \$42,300, pears \$37,300, and peaches, cherries and vine fruits, \$938,800. Careful spraying and the better care of trees are two causes assigned for the crop, which is 25 per cent larger than in 1906. Mr. Crowell says in his report:

"Spokane county fell far short of supplying its home market during 1906, and it was necessary to ship in 66 cars of apples from the Yakima and Wenatchee. This fruit was shipped from a district where spraying was carefully attended. Had spraying been more thorough this year the increase would have brought to the grower fully \$500,000. However, the spraying has brought the production up to a supply equal to the home demand, while many cars of apples have been shipped to the markets of the world.

"I have not been able to get the exact number of acres of fruit for cultivation in Spokane county. The assessors' figures show 5,186 acres of apple orchard, 96 acres in pears, 119 acres in prunes, and 70 1-2 acres in strawberries. From the same source it is shown that there are 1,398 acres given over to the cultivation of miscellaneous fruits, including peaches and cherries. I am confident the figures given by the assessor are too low. Prof. C. L. Smith of Spokane says there are 250 acres given over to the cultivation of prunes alone along the lines of the Spokane & Inland Empire railway, and I believe the total number of acres of fruit is much larger than that given."

"The rigid inspection of nursery stock shipped into the county has caused the nurserymen to be more careful of the stock they send out, and, as a result, a better grade of trees are purchased by the fruit-grower," said Mr. Crowell. "More care is also being exercised in marketing fruit. During October and November the commission condemned and destroyed 911 boxes of apples and in September 595 boxes of pears infected with codlin moth and San Jose scale were destroyed. A large percentage of the pears destroyed was from the Snake river district.

"Although in force only two years, the inspection laws have been a great help to the fruit-grower and dealer, who are beginning to realize the benefits to be obtained from spraying. They realize that the inspected fruit brings a better price and establishes a record for clean fruit. When the inspection was taken up two years ago, fully one-half of the nursery stock sold to the grower had to be condemned because of the diseased condition of the trees. This year, aside from three shipments of trees, the

Is Your Name In The Above List? If Not, Why Not?

MAINTAINING SOIL FERTILITY.

In the first lecture of the series before the Worcester County Horticultural Society, on January 2, Dr. L. A. Clinton, director of Storrs' Agricultural Experiment Station, Connecticut, said that "the abandoned farms of New England show progress in New England agriculture. It speaks well for the New England farmer. These farms are not being abandoned because of lack of fertility of the soil, but simply because the cost of producing crops on these farms at the present time is too great and the farmers have discovered they can grow crops cheaper on other farms. When New England becomes densely populated somebody will grow crops on these fields that will surprise us.

"What is fertility? What is the measure of fertility? If we have a field that is fertile, what character does it possess that makes it fertile? If not fertile, what does it lack? What can we do to make it fertile? If we have good soil, how are we going to keep it fertile, so that it will be fertile for the next man and the next man?"

"The problem of fertility and the measure of fertility is, crop-producing power.

"Half of the successes in life do not come of the work you can do, but of the work you can have others do for you. Every farmer, gardener, or fruit grower has friends in the bacteria in the manure pile. As a matter of fact, not half the farmers think about these friends, the

Bacteria of the Soil.

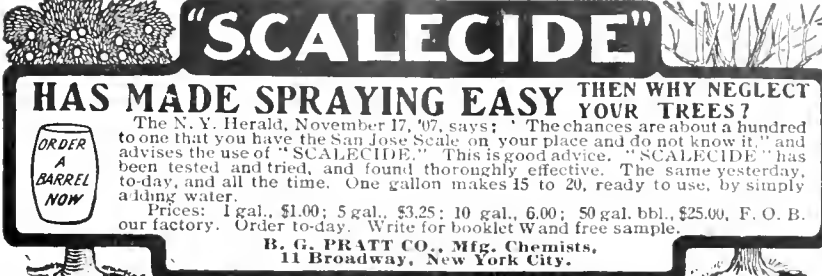

who would like to do work for him if they would be let. Bacteria in the soil is something new. Ten years ago there was talk about bacteria in the milk, but nothing of bacteria in the soil."

Dr. Clinton then told about people who send samples of soil to experiment stations, asking them to analyze it and tell them what the soil needs. He explained that it isn't the farmer who has toiled 40 years that asks this question, but the city man who has gone to farming and who has read literature such as Harwood's "Wonders of Luther Burbank." He said a farmer would know that the experiment station can't tell them what their farm needs.

Dr. Clinton said he believes in under-draining a field if necessary and that he would take chances of a dry summer better with the field under-drained than not under-drained.

"The soil does not lose its fertility because of the plant soil which is removed with the crop we take from the soil," said Dr. Clinton. "All actual plant food could be returned at the expense of a few dollars in fertilizer." Dr. Clinton told the farmers, so far as possible to keep every foot of the farm covered with growing plants, all the time.

"When you take your corn off," said he, "have something else put right on there so it will be a growing plant and a covering on the ground all winter, beside the snow, to keep the soluble plant food and prevent its being drained off by the winter rain." He explained the great damage done by leaving a field exposed to winter rains,

"SCALECIDE"

HAS MADE SPRAYING EASY THEN WHY NEGLECT YOUR TREES?

The N. Y. Herald, November 17, '07, says: "The chances are about a hundred to one that you have the San Jose Scale on your place and do not know it," and advises the use of "SCALECIDE." This is good advice. "SCALECIDE" has been tested and tried, and found thoroughly effective. The same yesterday, to-day, and all the time. One gallon makes 15 to 20, ready to use, by simply adding water.

Prices: 1 gal., \$1.00; 5 gal., \$3.25; 10 gal., 6.00; 50 gal. bbl., \$25.00, F. O. B. our factory. Order to-day. Write for booklet W and free sample.

B. G. PRATT CO., Mfg. Chemists,
11 Broadway, New York City.

when a covering of rye or any growing plant, even weeds, would protect it, and can be ploughed under and improve the soil.

Continuing, he said: "Now we all know the value of clover. Some people think clover can be grown in any field to bring it back, but that is not so. Clover grows well on fields that have good soil, and it clover grows in a field, you can be sure that that field is in good condition." Dr. Clinton explained that one of the best field coverings is rye.

"Suppose we find out that we have done all we can, and still something is needed. Then I say use fertilizers, but use them intelligently. In buying plant food I buy three things, nitrogen, phosphoric acid and potash, and mix it in any quantity I want it. I don't let somebody mix it for me. In fertilizing my fields I bear in mind the crop I intend to grow."

Regarding the use of lime, Dr. Clinton said: "It is good under three conditions: First, if the field is deficient in lime, which isn't so often, as not one field in 10,000 is deficient in the lime necessary; secondly, if the ground is acid, an application of lime would change that; third, if the soil is clayey, then lime will remedy that."

THE LATE EVERETT B. CLARK

A fire in the boiler-house of the greenhouses of Marcus L. Tirrell, Randolph, Mass., caused a damage to the building of about \$50. No estimate is given on the damage to the plants and flowers from smoke, water, cold and broken glass. Mr. Tirrell carried no insurance.

Obituary

W. H. Brown, florist, of Pittsburg, Pa., died on December 22, aged 66.

Levi Parsons, an employe in the Wilcox greenhouses, Omaha, Neb., dropped dead on December 19.

George C. Butz, a member of the horticultural staff of the Pennsylvania State College, died on December 14 at the age of 44.

B. F. Barton, for many years a successful salesman for Chase Bros., nurserymen, died on December 30 at West Windsor, Me., aged 81.

Mrs. Louise S., wife of Dr. Charles F. Millspaugh, curator of the botany department of the Field Columbian Museum, Chicago, died at her home on December 24, after a brief illness.

Alfred Plant, president of the Plant Seed Company of St. Louis, died on December 28 after an illness of eight months, at the age of 87. Mr. Plant was born in Lancaster (now Clinton), Mass., graduated with honors from Yale in 1847, entered the employ of Plant & Co. in 1856, where he was prominent in building up the business of which he ultimately became the head.

Francis Quinlan, of Lynn, Mass., whose death was recorded in our obituary columns last week, was possessed of a strong vein of humor, and many stories are told of his fertility as a joker.

The story is told that one summer's day he had been on an Elks' outing to Nahant and the party was on the way back to Lynn in a "barge." The weather was hot, and the barge was altogether too crowded for comfort. Suddenly Quinlan fell to the floor of the barge, apparently unconscious. The others lifted him onto the seat tenderly. Some one produced a bottle of whiskey and persuaded him to drink a portion. Others got water and bathed his forehead and wrists, and during the rest of the journey to Lynn he was given one entire side of the barge seat to lie on, while several kept him cool by fanning. When the barge reached Lynn they helped Quinlan out. No sooner did he touch the ground than he broke away and dashed up the street, leaving an amazed and angry crowd of Elks behind.

Quinlan was a florist in Lynn for many years and left considerable property.

WILSON'S PLANT OIL

If you want to make money there is only one way. That is to have clean stock and the only way to get it is by using WILSON'S PLANT OIL.

Mr. Andrew Wilson—Having used your Insecticide here, I can testify to its efficiency in destroying scale and other insects infesting plants.
New York Botanical Garden, Bronx Park, New York City, September 5, 1906.
Yours very truly,
GEO. A. SKENE.

Mr. Andrew Wilson:—Dear Sir—Your Plant Oil is certainly the most effective scale killer I have ever tried. Please send another five gallons.
Florham Farm, Madison, N. J., December 8, 1906.
Yours truly,
A. HERRINGTON.

PRICES: 1-2 pint cans, 25c; pints, 40c; quart, 75c; 2 quarts, \$1.25; gallon, \$2.00; five gallons, \$9.00. Cash with order.

POSTS MADE DURABLE.

Woods Given Sixteen Years' Additional Service by Preservative Treatment.

Fence posts of many kinds of cheap woods which ordinarily would soon decay if set in the ground can be made to last for twenty years by a simple treatment with creosote. Most of the so-called "inferior" woods are well adapted to the treatment, and this is especially true of cottonwood, aspen, willow, sycamore, low-grade pines, and some of the gums. When properly treated, these woods outlast untreated cedar and oak, which are becoming too scarce and too much in demand for other uses to allow of their meeting the demand for fence posts.

Impregnation with creosote has been greatly cheapened by the introduction of the "open tank," which can be installed at a cost of from \$30 to \$45, or much less if an old boiler is used. A tank with a bottom 12 square feet in area will suffice for treating 40 or 50 6-inch posts a day, or double this number when two runs per day can be made. The absorption of creosote per post is about as follows: Eucalyptus, one-tenth gallon; willow, two-tenths gallon; sassafras, ash, hickory, red oak, water oak, elm, maple, four-tenths gallon; Douglas fir, quaking aspen, and black walnut, six-tenths gallon; sycamore, cottonwood, and lodgepole pine, seven-tenths gallon. The price of creosote is about 10 cents per gallon in the East and Middle West, 16 cents per gallon on the Pacific coast, and 27 cents per gallon in the Rocky Mountain States. The cost of treating a post will therefore vary from 4 to 15 cents. Properly treated, it should give service for at least twenty years.

Experiments of the Forest Service show that with preservative treatment the durability of lodgepole pine in Idaho is increased sixteen years. The cost of creosote is there relatively high, yet by treating posts there is a saving, with interest at 6 per cent., of 2 cents per post yearly. More important than the saving, however, is the fact that through preservative treatment other woods are fitted to take the place of cedar, of which the supply is rapidly becoming exhausted. A detailed description of experiments in preserving

fence posts, together with practical suggestions for treating them on a commercial scale, are contained in Circular 117 of the Forest Service. This publication can be obtained upon application to the Forester at Washington.—Press Review 27 (Circular 117 of the Forest Service).

The school ma'ams will flock to Amherst again next summer. The Massachusetts Agricultural College will supply them with four weeks of fun and study in the outdoor life. This plan of teaching teachers out of doors was tried with great success in the summer of 1907, and the plan now is to give more varied and extended exercises along the same line. There will be work in elementary agriculture, nature study, science and education suited for teachers, preachers and amateur farmers. This is a novel departure in school work, but one which is already giving good results.

A colored plate of John Waterer & Sons' rhododendron Fred Waterer was sent out as a supplement with The Garden, London, in its issue of December 21. The color is bright crimson and strikingly beautiful.

Harry Papworth, of New Orleans, shed his hail insurance too soon. The hail storm will get you if you only wait long enough, as Harry found out to his cost. The uninsured are trotting in the same class.

JOHN G. ESLER.

H AND O

HERE IS SOMETHING MORE TO THINK OVER

Did you ever stop to think that the outsider often knows more about your business than you do? Yes, actually knows more about its weak spots, that is, he knows better why you are not *more* successful. In other words, when you are constantly so near your own interests, it is often impossible for you to get the accurate view others can. You get wound up in prejudice, a habit, a rut. You know something is wrong, but become powerless to locate it. We are not only greenhouse builders, but we are trouble finders. We are not authority on how to grow things, but we do know the best house in which the best things grow, and how to build that sort of house. Can tell you where your present construction is wrong and build you a house that will cut down running expenses, reduce repair bills and put you in a position to meet competition of the keenest. You need us! Write!

HITCHINGS AND CO.

GREENHOUSE DESIGNERS AND BUILDERS.
Manufacturers of Heating and Ventilating Apparatus.

1170 Broadway, NEW YORK.

HERE IS THAT NEW CATALOG

that we have been talking about—let us give you just a little scan of its contents. There are five pages of a mighty interesting chat with Mr. Burnham, one of the pioneer greenhouse builders—then come three pages on "Planning and Locating your Greenhouse" which contains a good bit of information as a moneysaver to you. The next 26 pages cover every conceivable sort of greenhouse suitable for either private places or institutions of various kinds—these pages start with a single compartment house 18 feet wide and 33 feet 4 inches long, and end with a series of selections covering ranges for growing every sort of thing. There is

a page on right benching, another on the heating question, and the last fourteen pages contain the real meat of the catalog, and tell exactly what our Sectional Iron Frame Construction is—each structural part is described and illustrated by a detail cut. The various types of side wall constructions and different styles of houses are freely illustrated. No pains have been spared to make this catalog not only a text book of perfect construction, but a decidedly interesting book to read. The illustrations are many and printed in the finest way possible. If the greenhouse question interests you, and you contemplate erecting one, we want you to have this catalog.

We make every part of a greenhouse but the glass. We sell any part.

LORD & BURNHAM CO.
Greenhouse Designers and Manufacturers

1133 BROADWAY, cor. 26th Street, N. Y.
BOSTON Branch: 819 Tremont Building
PHILADELPHIA Branch: 1215 Filbert St.

What a clean cut, convincing proposition this is! What a total absence of any attempt to secure ornamentalness—yet how downright graceful and beautiful every line and structural detail of this U-Bar construction is. Imagine a house of other constructions with heavy gutter at the eave, and compare it with this curved eave U-Bar house absolutely free of any obstruction, from ridge to sill. It is just this freedom—the wide spacing of glass and unequalled lightness that makes them the superior growing houses they are. We erected this range on one of the largest estates in Newport and carried out the owner's wish to provide for additions, by framing in a part of the connecting passages which will fit the future houses, and using them at present for side entrances. An 11 foot house, used for propagating, joins the potting room with the center compartment. But to really know U-Bar strong points, go and see a house for yourself, or next best send for the catalog. Pierson U-Bar Company, Designers and Builders U-Bar Greenhouses, Metropolitan Building, 4th Avenue and 23rd Street, New York.

WINSOR and WHITE ENCHANTRESS Strong Rooted Cuttings Now Ready For Delivery

WINSOR has proved to be the finest carnation in the light pink class. We sold a large quantity of it last year, but there will be a much larger sale for it this year. At the English Carnation Show held in December, it was the winner in the light pink class. It is doing well everywhere and will supplant everything in that color.

WHITE ENCHANTRESS will occupy the same position among white carnations that Enchantress does among flesh pinks. It has all the good qualities of the common Enchantress,—long stem, earliness, large size, freedom, etc. In our opinion, it is by far the best white carnation ever introduced.

We have a splendid stock of both Winsor and White Enchantress ready for immediate delivery, and will guarantee perfect satisfaction with the cuttings supplied. Do not wait, because the demand for these varieties is bound to be enormous. **Order early, while we can promise immediate delivery,** and secure gilt-edged stock. We have a large stock of both of these varieties, and all our cuttings are heel cuttings, taken from flowering stems. On account of the quantity that we are growing, we are not obliged to over-propagate, and our stock is in the most perfect and healthy condition.

Strong rooted cuttings from sand, \$6 per 100, \$50 per 1000. Extra strong transplanted cuttings from soil, \$7.50 per 100, \$60 per 1000. Strong established pot-grown plants \$9 per 100, \$75 per 1000.

F. R. PIERSON CO., - Tarrytown-on-Hudson, - NEW YORK

CARNATIONS ROOTED CUTTINGS

Winona, color, true clear pink, comes nearest to Fiancee but a different type flower. Growth on order of Scott but vastly improved in every respect. Early flowers in quantity and on long stems. Does not burst its calyx. Fine, shapely, active growth. In color and productiveness it is without an equal. Orders booked now and filled in strict rotation. \$12 per 100, \$100 per 1000.

White Perfection, pure white. We have a large stock. \$3 per 100, \$25 per 1000.

Cypripedium Fairrieianum Hybrids

CYPRIPEDIUM X NIOBE.

Few hybrid cypripediums are so interesting as the Fairrieianum hybrids, which, until quite recently, were almost the only representatives of the much talked of "Lost Orchid" in cultivation. Some three years ago an interesting note appeared in HORTICULTURE by E. O. Orpet, in which the possibilities of the habitat of Cypripedium Fairrieianum being rediscovered were discussed. Mr. Orpet was optimistic and cited the case of Cattleya labiata which was also "lost" for quite a while. Within a short time the news came that Fairrieianum had been found, causing a great deal of newspaper comment and excitement in the orchid world. The coincidence passed without comment.

The accompanying illustration gives a good idea of the beautiful hybrid X Niobe which resembles its pollen parent and has much of the vigor of the seed parent; also, like many hybrids, has a better constitution than either. The Fairrieianum hybrids, although comparatively rare at the present time, will, during the next few years become plentiful, as Cypripedium Fairrieianum is now being imported and grown by thousands and strange to say has not as yet exhibited any tendency to sicken and die as was expected.

The fact that its habitat and environs are now known

has much to do with this as no doubt many plants of former importations died because they were grown too hot and close. Coming from a high altitude a cool airy treatment is necessary.

An interesting circumstance has come to light since the rediscovery of this famous cypripedium. Cypripedium hirsutissimum which was introduced at the same time as Fairrieianum has been for years grown and cherished by the family of Mr. Fairrie as Fairrieianum. They only discovered their mistake when illustrations of the rediscovered plants appeared.

The seed parent of the subject of our illustration, Cypripedium Spicerianum, succeeds best under somewhat cool treatment. The hybrid, however, is best grown in the warm East Indian compartment. All the Fairrieianum hybrids are free flowering and may some day rival C. insigne and C. Leeaanum as commercial varieties. In Niobe the habit is good, stem long, dorsal sepal white, veined and partly suffused with rich purple, lip brownish, petals whitish green ribbed with brownish purple, staminode greenish white with dark red centre.

Some of the best Fairrieianum hybrids are vexillarium, Juno, Arthurianum, Baron Schroder, H. Ballantyne, Edwardii and Amesiana. As a seed parent Fairrieianum has not been much used. The records give only two, Constableanum and Aaseni, which are not common. The possibilities of the future, however, are unlimited.

James Hutchison

Salvia Zurich

Anyone growing salvias should try this splendid variety which was recently introduced. We have found it preferable to the older standards in our last year's trials and so have some other members of the craft here and we have all discarded Bonfire and Lord Fauntleroy, which we grew up to the present time. Salvia Zurich bloomed much earlier, though the cuttings were not nearly so old and kept on blooming just as long as the rest. As our stock last season was limited we used it for our particular customers who must have a scarlet sage bed every year and they were well pleased to have them in bloom so early in June where other years the beds made little show before the end of August. It does not grow as tall as the older kinds and seems to bloom freer, and is just as scarlet as it can be. We recommend to our brother florists a trial. It is no more experiment: we have tried it and know it is good.

We trust every one of our readers who conducts a greenhouse for plants or flowers will carefully read the series of articles on the use of fertilizers now being contributed by Dudley M. Pray. The third in the series appears in this issue. These contributions are written for HORTICULTURE by a gentleman who has

for years made a special study of this subject from a practical florists' standpoint and present the information in a quite different style from that followed in the ordinary Experiment Station analyses. At the beginning of the year we promised our readers some good things for 1908. This is one of several in prospect that we did not specify by name. We have others in store also highly valuable. Tell your friends to subscribe for HORTICULTURE for every issue will contain much useful reference matter.

Profitless work

The ambition shown by some flower growers to force tulips into bloom and into market earlier in the season than it is possible to get a passable flower has always seemed incomprehensible to us, for there is no incentive of price or demand. Quantities of stemless abortive flowers prematurely driven out of rootless bulbs are not an uncommon sight in the markets at the present time. The best price at which they can be sold to the cheap cemetery florists cannot possibly cover more than the bare cash cost of the bulbs and is often less than that. When we consider that two or three weeks more allowed these bulbs to develop their flowers would have enabled them to produce something creditable and saleable we are at a loss to understand the wasteful course of the grower who is supposed to do these things for the profit there is in it.

Making a record

At this time, when new officers are beginning their administrations and new and ambitious policies are being introduced in our clubs and societies an excellent opportunity is offered for society members generally to forget past differences, drop old and threadbare controversies and with cordiality and enthusiasm give a helping hand to any movement which promises to promote the prosperity and usefulness of the organization and help the objects for which it exists. And right here, it may not be out of place to remind our readers that mere numbers must not be depended upon as evidence of any great or permanent prosperity in any organization. Some officers rely much upon their success in inducing many accessions to the ranks from among their friends. This may or may not have permanent value according as the accessions are due to simply the personal popularity of an official or mean support for some well-planned and far-reaching policy calculated to redound to the lustre of the society and the good of its constituency. Presidents are, or should be, chosen for something more than to sit on a platform and preside at meetings and members in electing their fellows to these positions of honor and duty should understand that they are themselves assuming other responsibilities than of simply flocking to the meetings and participating in the general pleasantries, admirable as that undoubtedly is. Let us hope that every newly installed officer together with those over whom he presides may see to it that his year is made notable for some distinct achievement to which in after years he and his supporters may revert with a proud consciousness that it furnishes ample justification of his elevation to official honors.

The Paeony Disease

I have noticed a number of writings lately in various farm and trade papers harmonious with the article in a recent issue of HORTICULTURE anent the new paeony disease, and quite a number of growers and customers have written me regarding it. We have had only a few plants to show this "disease" that really is only a symptom, a symptom more of carelessness or thoughtlessness than a real disease. Our land progresses from a very light to a very heavy loamy clay, from a gravel or sand subsoil to soapy stiff clay, hence we are very certain that soil has nothing to do with the disease.

Where found this symptom was on a few plants that we imported from France; details, as in our own case each had manured quite heavily after planting or had given each plant a heavy mulching leaving the manure to rot over the crowns. Usually after a wet spell they show a white spawn around the stems at about the surface line, in a few days the plants show a delicate sulphury color of stem and leafage, a few days later they blight black to the roots and the roots often show a brown rot. This usually is the beginning of the end; however, if the plant is lifted and planted into a soil where there is little vegetable matter it may be revived but the dead matter should be cut off and lined lightly before planting.

There is quite a different result with some varieties apparently from the same mistreatment. The plants only partially blight, largely just the tips of the leaves, the rootage in about the same proportions. The microbes get through the bases of the season's growth, nearly eating them apart from the old plant; this causes a dense growth, quite dwarfed, the leaves as they mature becoming a much lighter color than plants not affected. Usually one would think the plants are badly mixed but usually they revive but rarely bloom for several years after it is noticed.

A number of writers have written articles regarding the latter symptom, calling it paeony rosette, stating that plants so affected are worthless and should be dug and thrown away. My observations were such that I let the latter plants stand, removing the soil around the plant as much as possible, then putting soil back that has very little manure in it. It is a very good idea to distribute a good application of slacked lime about the plant, boeing it in as close to the stems as possible; this kills the disturbing agencies and the plants revive. Paeonies that are in low ground or low places where water is allowed to cover the plants for any length of time show these same symptoms but it is generally fatal.

We use manure direct from the stable or well rotted—whichever we have—distributing it over the plantage about November to January but usually draw the soil to the plants with shovel plow before manuring. I think many paeonies are over-manured hence the indifferent results. Since we noticed the bad results with manure when applied to young plants we usually try to get a crop of corn or potatoes previous to planting with paeonies. This finds the soil in very fine condition, few insects and bacteria. We give no manure before the following fall, and then after the ground is frozen.

I think most of the parties who have had trouble with paeonies have received them from growers growing them for long periods in one place or that have them growing in very well enriched soil. Where paeonies are

given good cultivation manuring is not essential to get good results.

I have no fears regarding paeony diseases. We have five acres very closely planted; have stock from at least twenty-five growers but the loss of plants has been practically nil. Officialis Rosa Superba is the only sort we have had trouble with but this seems general and evidently is a constitutional disease.

C. BETSCHER.

Fertilizing While Watering

In order to apply to a given area a certain weight of soluble plant food in the course of the usual watering, both the amount of water then used on that area and also its fertilizing value per gallon must be known, or a corresponding figure. If one filling of a tank would please "go even" on certain benches or convenient areas it would be simple to put the amount desired for that area in that tank and not bother about the strength as long as the watering was sufficient. In this case the amount put in the tank would be the amount that would reach the area. But this nice "coming out even" happens more often in the arithmetic than elsewhere and as identical conditions of watering are rare it will nearly always be necessary to know both the strength of food at the tank end and also the gallons applied to the soil to calculate what amount of food reaches the area at last. Similar remarks would apply to the use of Kinney pump and such devices. Just what is a proper amount is "another story" at this time.

It is to be remarked here that it is very hard to over-emphasize the fact that a fertilizer should be applied weakly if possible, but often. To be applied often it must be weak or more than is necessary will be carried to the soil and either be wasted or worse. As a rule manure-water is such a weak liquid. It is certain that plant roots can grab what they want from an infinitely weak solution.

The accompanying table is an attempt to put part of this watering problem into figures. The peculiar way the values in the last column run is due to the employment of whole figures in the first.

One gal. applied to	1000 sq. ft. would get	Water would be
1 sq. ft.	1000 gallons.....	1.6 Inches deep
2 " "	500 "8 " "
3 " "	333 "5 " "
4 " "	250 "4 " "
5 " "	200 "3 " "
6 " "	166 "27 " "
7 " "	143 "23 " "
8 " "	125 "20 " "
9 " "	111 "18 " "
10 " "	100 "16 " "
12 " "	83 "13 " "
14 " "	71 "11 " "
17 " "	60 "10 " "
20 " "	52 "08 " "
26 " "	40 "07 " "
51 " "	20 "03 " "

A depth of water one fifth of an inch is not uncommon but the range varies so in practice that no one figure could be said to be "it." A whole raft of books could be written on this one subject.

Rudley M. Bray

NEWS OF THE CLUBS AND SOCIETIES.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The next regular monthly meeting of the club will be held at Horticultural Hall, on Tuesday evening, January 21, 1908, at 8 o'clock.

The officers elected at the November meeting will be installed. In place of a regular lecture the meeting will be an open one to which ladies are particularly invited. A very pleasing entertainment has been prepared and other attractions will be added which will render this a most delightful gathering for all who attend.

The February meeting will be Carnation night, which will be a record breaker. Exhibits of all the season's novelties and other attractions are being prepared. Plans for the March meeting are also well under way.

The opening of 1908 finds the Gardeners' and Florists' Club of Boston more prosperous than ever before in its history. The officers for the present year will strive with might and main to make the club a power for good, and to keep it in the van of horticultural progress. No gardener or florist who wants to be up-to-date can well afford to remain outside our fold. May the new year be one of happiness and prosperity to all our members.

W. N. CRAIG,
Secretary.

ST. LOUIS FLORIST CLUB.

The St. Louis Florist Club made a good beginning in the New Year, which was very pleasing to President Young. The first meeting in 1908 took place on Thursday, January 9th, at 2 o'clock, with thirty members present. The entertainment committee reported in favor of economy and was granted further time until the next meeting. The proposed pottery stock company was reported on by the committee in charge. The report was quite lengthy and a long discussion took place. It was finally voted that a subscription list be floated for stock, and that this subscription be in the hands of the committee until May 15th, and unless by that time \$10,000 is subscribed the proposition will be dropped.

It was voted that the club hold its annual Carnation exhibition at the regular meeting in February, competition to be open to local growers only, and to invite growers of new varieties to send exhibition blooms for the benefit of our carnation growers, who are always well represented at these meetings.

J. E. Ammann of Edwardsville and A. S. Halsted of Belleville invited the members to come to Springfield February 18th to attend the meeting of the Illinois State Florists' Association, and promised them a good time.

The question box brought out a lively discussion on a number of important questions. This ended the first meeting of the Florist Club in 1908. February 12th is the date of the next meeting.

NEWPORT HORTICULTURAL SOCIETY.

The annual ball of the Newport Horticultural Society took place on Wednesday, Jan. 8th, in Masonic Hall. The attendance was large and the enjoyment was unabated from the start till the "Wee sma' hours" in the morning. The hall was tastefully decorated by the committee assisted by another committee from the Telephone Exchange, the employes of which had a ball there the evening previous. The committee, of which Mr. John T. Allan the president of the Horticultural Society was chairman, deserve great credit for bringing this ball to such a satisfactory conclusion, financial and otherwise. Although at no time uncomfortably crowded the hall was full from beginning almost to the end with active participants in the pleasures of the dance. A few, of course, looked on or chatted in corners but they were few in comparison with the number so engaged on former occasions.

D. M.

PASADENA GARDENERS' ASSOCIATION.

The regular meeting of the above association was held on January 3, President John Blake in the chair. There was a large attendance of members and also visitors from Los Angeles. A general discussion on roses and various topics took place. At the close Mr. Nilsson addressed President Blake and presented him with a gold and marble clock and pair of gold candlesticks to match as a mark of the appreciation of the good work done by him and his untiring endeavors in the interests of the association. Nineteen hundred and seven was a very successful year, each meeting being well attended, and at the present time there are 102 members in good standing and a neat sum in the bank in reserve for the next flower show. Officers elected at the December meeting were: President, John Blake; vice-president, Otto Hentchy; secretary, R. Mackenzie; treasurer, G. F. Nilsson; trustees, Howard Coolidge, J. M. Ross.

H. E. GEORGE.

THE CARNATION MEETING AT WASHINGTON.

The all-absorbing topic of conversation in the Washington florist world is the approaching carnation show to be held Jan. 28th to 30th inclusive, at National Rifles Armory. The banquet to be given on the evening of the 29th will be held at Kauscher's. There was a special meeting of the executive committee of the local club called on January 19th to dispose of some final matters, and the following gentlemen were appointed on the banquet committee, Peter Bisset, Geo. Cooke, Geo. Shaffer, John Robertson, Wm. F. Gude, F. H. Kramer and Chas. McCauley. With such an efficient committee there should be plenty of good things coming.

CONNECTICUT HORTICULTURAL SOCIETY.

This society held its regular meeting on January 10, President Huss occupying the chair. The newly appointed officers were duly installed and a program of the work for the coming year was outlined. Various committees were appointed and it was decided to hold a pansy show sometime during May. As we have a number of pansy enthusiasts in our community the success of the coming show is practically assured. As an indication that the exhibition will be on a considerable scale, John Gerard, the pansy specialist of New Britain, promises at least 2,500 pots from his district. President Huss exhibited for the first time here the new *Moschosma riparium*, which promises to be of considerable value as a winter flowering subject. It was awarded a certificate of merit.

Certificates of merit were also awarded to Mr. Huss for a fine display of cut orchids and a specimen plant of *Reinwardtia trigrinum*, and to A. J. Weber, gardener to Walter Goodwin, for *Nephrolepis Whitmanii*. President Huss presented the society with a block and gavel made from the Washington elm, which until within a few years was one of the famous landmarks of Hartford.

A. CUMMING, Jr.,
Secretary.

AMERICAN ROSE SOCIETY.

The Executive Committee of the American Rose Society met at the Hotel Martinique, New York City, on Monday afternoon, January 13. August Poehlmann of Morton Grove, Ill., has been appointed special committee-man for the Chicago Show. J. A. Valentine will present a paper at the annual meeting, upon Roses in Colorado; Adolph Poehlmann will present one upon Practical Rose Growing, and Wm. H. Elliott of Brighton, Mass., will give a paper upon the Proper Size of a Greenhouse for Commercial Rose Growing. Mr. Elliott has the largest single rose house in New England. Robert Craig of Philadelphia will have a paper upon Forcing Roses in Pots for Easter. A new rose from Sharon Hill, Pa., Mrs. Jardine, will be one of the novelties on exhibition.

The following judges have been appointed: Messrs. J. E. Wilcox, Council Bluffs, Ia., Adam Graham, Cleveland, O., and John H. Dunlop, Parkdale, Ont.

The Secretary reported that many of the members had paid up their annual subscriptions within ten days from mailing the bills, and that the Society needed as many as a thousand annual members, all interested. The details of schedules had been attended to and the first edition had already been printed and mailed. There will be a supplementary list of prizes issued to cover those that are given for special objects.

BENJAMIN HAMMOND, Secretary.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Secretary Rudd announces the following appointments by President Traendly for the year 1908:

Entomologist—Prof. Frederick L. Washburn, University of Minn., Minneapolis, Minn.

Botanist—Prof. L. H. Pommel, Ames, Iowa.

Pathologist—Dr. B. M. Duggar, Columbia, Mo.

Legislative committee: Benjamin Hammond, Fishkill-on-Hudson, N. Y.; L. B. Coddington, Murray Hill, N. J.; Wesley Greene, Des Moines, Ia.; E. A. Moseley, Washington, D. C.; Patrick Welch, Boston, Mass.

State Vice-Presidents.

Alabama—H. F. P. Davis, Mobile, Ala. California—Sidney Clack, Menlo Park, Cal. Colorado—Emil Glauber, Montclair, Cal. Connecticut—Alex. Cumming, 188 Hawthorn street, Hartford, Conn. District of Columbia—Geo. H. Cooke, Conn. avenue and L street, Washington, D. C. Florida—E. N. Reasoner, Oneco, Fla. Georgia—M. C. Pennoek, Gainsville, Ga. Illinois—J. F. Ammann, Edwardsville, Ill. and Fred Lautenschlager, 2561 N. 41st St. Court, Chicago, Ill. Indiana—John Bertermann, 241 Massachusetts Ave., Indianapolis, Ind. Iowa—J. A. Kramer, Cedar Rapids, Ia. THE NEW S. A. F. DIRECTORS.

GEORGE ASMUS,
Of Chicago.

JOHN YOUNG,
Of New York City.

PITTSBURGH FLORISTS' AND GARDENERS' CLUB.

The meeting of the club, January 7th, was Rose Night. E. G. Hill Co. had a large display of Rhea Reid and Princess, the latter a fine, light pink; also carnations Sarah Hill, white, Afterglow and White Enchantress. Princess rose may be renamed, as it seems the name has already been appropriated. It is said to be a good keeper and to open entirely out without dropping its petals. W. P. Craig showed rose Mrs. Jardine and Poehlmann Bros. Co. displayed Mrs. Potter Palmer. The president appointed as committee to pass upon the merits of the carnations exhibited, Messrs. Bader, Lorch and Crall, who awarded to the E. G. Hill Co. first-class certificates for carnations Sarah Hill and Afterglow, and certificate of merit for White Enchantress on its pure white color. Messrs. Fred Burki, T. P. Langhans and E. J. McCallum, as rose committee, awarded first-class certificates to E. G. Hill Co. for Rhea Reid and Princess; to Poehlmann Bros. Co., for Mrs. Potter Palmer, and to W. P. Craig, for Mrs. Jardine.

Fred Burki, Gibsonia, Pa., showed roses, among them being Alice Roosevelt, a sport from Chateauy, of which he has not yet grown enough to pass final judgment upon.

Henry Menschke showed roses, including Gen. MacArthur, the latter particularly noticeable for its charming fragrance. Dr. Shafer, through Jas. Hutchinson, showed four hybrid cypripediums.

The secretary was instructed to write to the American Carnation Society, inviting them to hold their 1909 meeting in Pittsburgh.

As officers of the club for 1908 the following were put in nomination: F. Burki, president; E. C. Reineman, vice-president; H. L. Blind, treasurer; H. P. Joslin, secretary; E. C. Ludwig, assistant secretary; P. S. Randolph, Jno. Bader and C. S. Crall, executive committee.

Jno. W. Jones, who has been president of the club for two years, declined a re-nomination. His faithful

services and hard work have been greatly appreciated by the club.

At the next meeting, on February 4th, there will be a competitive exhibition of carnations by members. As a committee in the interests of the commercial growers Messrs. Randolph and Burki are appointed. The committee for the private gardens will be named later by President Jones by mail. Committee on prizes, Messrs. Falconer and Langhans.

H. A. Bunyard, who was present at the meeting, after paying an eloquent tribute to private gardeners, offered in behalf of A. T. Boddington, a prize of \$10 for the best 50 blooms of carnations, solid color or mixed, open to private gardeners only.

Letter was read from the city passenger agent of the B. & O., quoting rate of \$10.70, round trip, Pittsburgh to Washington, D. C., and return, to attend the Carnation Convention.

H. P. JOSLIN, Sec.

NEW BEDFORD HORTICULTURAL SOCIETY.

At the annual meeting of the New Bedford Horticultural Society the following officers were elected:

President, Frank C. Barrows; vice-president, H. A. Jahn; secretary, Joseph C. Forbes; assistant secretary, Edward E. Shaw; treasurer, Walter A. Luce; executive committee, William Keith, Andrew J. Fish, John H. Lowe, Robert Dunn, Walter D. Hathaway, Arthur J. Brooks, Peter Priaux, William H. Gibbs.

It was voted to hold the flower show in the fall, probably in September.

PENNSYLVANIA HORTICULTURAL SOCIETY.

J. Otto Thilow will give his complete lecture with stereopticon views on the Yellowstone Park before the Philadelphia Horticultural Society next Tuesday evening, January 21st. Members of the Florists' Club with their ladies, and all others interested, are cordially invited. Mr. Thilow delivered only about one half of his lecture last August on account of lack of time.

AMERICAN CARNATION SOCIETY.

Carnation Registered.

By Henry Nichols, Waynesboro, Pa. Mrs. E. T. Omwake, a light pink sport of Enchantress, registered subject to the approval of the Society.

ALBERT M. HERR, Lancaster, Pa.

NEW YORK FLORISTS' CLUB.

The January meeting of this organization was devoted to the pleasant duty of installing the various officers, committee reports and consideration of policies for the incoming year. The retiring president, C. H. Totty, introduced his successor, C. B. Weathered, who was received with prolonged applause. The new president said that he had no new policy or plans other than to carry forward the purposes of his predecessors and to complete as far as possible any unfinished work. He hoped that the dream of many years of having a permanent home might be realized. With better meeting rooms, seventy-five per cent. of the membership might be brought regularly to the sessions. He referred with much satisfaction to the present financial strength of the club and advised economy in the entertainment committee's domain during the year to come. The negotiations now under way to bring about closer relations with the Horticultural Society of New York would establish a means for inaugurating periodical floral exhibitions in New York on a reliable basis, and he hoped that some mutually acceptable scheme of co-operation might be effected. The address was thoughtful and broad in conception and was very favorably commented upon.

Vice-president W. E. Marshall, escorted by John Birnie and Patrick O'Mara, was next presented. He endorsed all that the president had favored. Secretary John Young, who was then called upon, was reminiscent and congratulatory in his remarks and urged active co-operation of the membership in support of the president. The treasurer, J. K. Allen, briefly promised to do his duty; trustee E. V. Hallock declared his greatest hope to be that he would not disappoint his fellow members; trustee W. B. DuRoi said that it looked to him as though something was going to be done; the club had been organized for work and the time had come when they proposed to do it; and A. J. Rickards, who was jauntily escorted to the platform by Mr. "Bobbie" Schultz, spoke in a similarly enthusiastic strain.

Patrick O'Mara spoke for the committee on closer relations with the Horticultural Society of New York, going quite fully into the question of the benefits to New York horticulture which would accrue from a friendly co-operation of the two bodies, especially in the giving of public exhibitions. He explained that there was no intent to merge the bodies or interfere with the autonomy of either. The discussion which followed was quite animated, and the committee was given another month in which to deliberate.

The treasurer's report was presented by Mr. Sheridan, showing the comfortable sum of \$2,601.95 in bank. A communication from the B & O. R. R. was read, stating that round trip tickets on certificate plan from New York to the carnation meeting at Washington would cost \$7.55. Tickets good going from January 21 to 29 inclusive, and to return up to February 1.

Several members of the executive committee of the American Rose Society who had held a special meeting in the afternoon were present. President Robert Simpson spoke of the rose meeting to be held at Chicago in

March. He said that it was expected that the exhibition on that occasion would be the best in American rose history, and he hoped that a large representation of eastern growers would be present. The executive committee, he added, had accepted an invitation from the Horticultural Society of New York to hold a co-operative exhibition of roses in New York next June. Messrs. W. P. Craig, A. Farenwald and S. S. Skidelsky also spoke briefly on being called up.

A set of resolutions on the death of P. J. Hauswirth of Chicago, expressing sorrow at the loss of a valued friend and sympathy with his family, was adopted by a unanimous vote.

The question of the annual dinner of the club was next tackled and was productive of much fun, all the wits of the meeting contributing to the comedy of the occasion as they gave their views on the conduct and the price of club banquets. The upshot was a vote to adhere to time-honored traditions and have a course dinner.

The president announced the following standing and special committees: On death of Victor S. Dorval, Messrs. Donaldson, Shaw and Stewart; legislative, Messrs. O'Mara, Sheridan and Stewart; essays, Messrs. Birnie, Barron and Hammond; awards, Messrs. Totty, Simpson, Turner, Kennedy, Traendly, Zangen and Zeller; exhibition, Messrs. J. Manda, Jaenecke, Lenker, Butterfield and Nugent; dinner, Messrs. Sheridan, Craw, Henshaw, Schultz and Marshall; house, Messrs. Rickards, Weston and Burnett; new meeting room, Messrs. Young, Sheridan and Allen; outing, Messrs. Marshall, Schenck, Shaw, J. Manda, Weber, Adams, Reimels, Schultz, L. Schmutz, Jr., F. A. Lord.

On the exhibition table was a large vase of the new rose Mrs. Jardine; some fine sweet peas in bright colors from A. Zvolanek, and a seedling carnation from J. Lappe. The award of a certificate of merit for Mrs. Jardine was confirmed and votes of thanks were tendered for the other exhibits.

NEW YORK STATE FRUIT GROWERS.

The eastern fruit growers are not particularly interested in the work of Luther Burbank, the California hybridizer. J. R. Cornell, president of the New York State Fruit Growers' Association, which convened in Syracuse, Jan. 8-9, when asked for his opinions of Burbank's work, said:

"Oh, the eastern fruiters are not particularly interested in what he is doing further than to follow the reports of his work. We are willing to accept what he may do if he really does something which will be of general benefit. Freak combinations and productions are not of much use to the fruiter.

"Burbank has gotten a whole lot of free advertising and that's about the sum and substance of his work. Hybridizing is not a new thing, by any means, and long before Burbank was thought of it was used successfully. To cross and recross products of fruit trees and vines, to improve them in point of size or flavor or output has gone on from time immemorial, almost. The hybridizer of flowers or plants, you know, is a well-known

factor in the production of improved varieties.

"As a hybridizer, Mr. Burbank has been successful, I imagine." The Burbank potato is one of his chief points of distinction, but he did not create that. It bears his name, however. Anyhow, it cannot be said that the Burbank potato is the best in the market. There are others just as good.

"The spineless cactus is something about which the fruit grower of the east has nothing to do, and whatever success Mr. Burbank has achieved in that direction does not appeal to us, save as the natural curiosity aroused by any attempt of a similar character."

The addresses given during the two days' sessions were all of a high order, practical and instructive. The exhibit was good, a large display being on the tables. The State Experiment Station showed 184 varieties.

The newly-elected officers are: President, J. R. Cornell, Newburgh; 1st vice-president, S. W. Smith, Albion; 2d vice-president, D. D. Stone, Oswego; 3rd vice-president, H. L. Brown, Carlton; 4th vice-president, W. S. Page, Linden; secretary, E. C. Gillette, Penn Yan; treasurer, C. H. Damon, Geneva; executive committee, B. J. Case,odus, chairman; S. W. Wadhams, Clarkson; L. L. Morrell, Kinderhook; T. B. Wilson, Halls Corners; F. M. Bradley, Barker.

NASSAU COUNTY HORTICULTURAL SOCIETY.

This society held its monthly meeting at Glen Cove, L. I., on January 8, with a large attendance. H. F. Meyer showed a fine vase of carnations. The annual dinner of the society will be held at the Oriental Hotel, Glen Cove, on January 29, at 4 P. M.

GEORGE M. KURZ, Cor. Sec.

CLUB AND SOCIETY NOTES.

The Texas State Horticultural Society and the Nut Growers' Association met in joint session at Audleue on January 15 and 16.

The New Jersey Floricultural Society will hold their annual smoker, Friday, Feb. 7, at Elks Hall, 240 Main street, Orange, N. J.

Wilfrid Wheeler of Concord, Mass., was the speaker at the lecture of the Massachusetts Horticultural Society on January 11, and his story of the Concord grape and its originator, Ephraim Wales Bull, was very interesting. The Concord grape was first exhibited on Sept. 3, 1853, before the Massachusetts Horticultural Society, and it won at various times for Mr. Bull the society's silver medal and the gold medal.

There will be a meeting of the National Council of Horticulture at the Auditorium Annex, Chicago, Ill., at 10 A. M., Jan. 22, 1908. The members of the Council invite suggestions or questions on any topics which should properly come before that body. Plans for the press bureau service for the coming year must be worked out. It is hoped to make this a stronger feature than ever before. Other matters have been mentioned and it is hoped that other lines of work may be instituted which will be helpful to the horticultural interests of the country.

COMPETITION—FAIR AND FOUL.

Read before the Florists' Club of Philadelphia January 7th, 1908, by S. S. Skidelsky.

Competition, it is claimed, is the life of trade—and so perhaps it is, providing of course the "live and let live" principle is not lost sight of.

It is an axiomatic truth—and we are beginning to realize it, to some extent at least, that success in its broader sense hinges not upon the failure of others but upon the general welfare and prosperity of the community.

The idea that one man's failure constitutes another man's success or vice versa, as we have been led to believe by those whose vision is circumscribed by the ramifications of their pocket books, has long since been relegated, in theory at least, to the rubbish heap of similar fallacies, having no foundation in fact.

The infamous financier, for example, who attempted to corner the gold market and succeeded in plunging the country into a panic, was no more of a success in life than the savage in the jungle who strangles his antagonist in order to possess himself of a few brass trinkets. Both are dismal failures, notwithstanding the apparent ascendancy of might over right.

The progressive business man of today is inclined to take a more rational and a broader view of business conditions and business opportunities. It begins to dawn upon him that the fundamental principle underlying the success of any enterprise, great or small, must first of all be sound in itself, else no enterprise can possibly endure.

Go where we may and look where we choose—the signs of the times point clearly to a general awakening of public conscience, to a general revival of that Spirit of Justice which, since times immemorial and throughout the whole range of history—both ancient and modern—was never known to fail in its struggle for a worthy cause.

The Standard Oil Company, well nigh a kingdom and a law unto itself, the tobacco trust, the beef trust, and many another corporation of questionable repute, whose colossal fortunes were amassed at the expense of an indifferent and patient people—who defied public opinion and strangled competition by means that were foul and methods that were adverse to the public welfare—are called to account at last. Their day of reckoning seems to have come. A mighty avalanche of public opprobrium that has been gathering momentum for some time, bids fair to sweep down and hurl itself upon the heads of the malefactors with a force that will be crushing in its effect. "Fair play" and a "square deal" seem to be the cry of the hour.

We seem to realize at last that the "corrupt man of business"—to quote President Roosevelt—"is as great a foe to the country as the corrupt politician." We hear it also from the pulpit, at the bankers' banquet table, in the corner grocery store.

We seem to realize that the time has come to call a halt to iniquities, that God Almighty had never intended to concentrate all the privileges and all the opportunities in the hands of the few, that the world is broad enough for all willing to try their chances in it.

It is claimed—and not without good reason, perhaps—that the wave of materialism which has swept our country is gradually expending its force and that the succeeding generation will witness a complete transformation in our ideals and in our moral make-up.

Be that as it may, the fact is patent that our tendencies and aspirations are still steeped in the mire of greed, that we are still resembling our brothers in the jungle, one arrayed against the other, the strong preying upon the weak, the mighty crushing the small fry.

That green monster—Jealousy—prompted by the inexorable dictator—the Almighty Dollar—does not only rule amidst us, but it rules us with an iron rod that, at times, and to many of us, is well nigh unbearable.

"Peace on earth and good will toward men" is a beautiful injunction, having the right ring to it—in Church, but no where else. In our daily intercourse with our fellow men, we cannot possibly be governed by such obsolete rules.

"Business is business" bears a more practical sound to our ears. It is our favorite slogan and, in our estimation, it is broad and powerful enough to cover up a multitude of sins.

It is not my object, however, to deal in platitudes, nor do I wish to assume the role of the preacher, whose business it is to exhort his audience.

The subject I have chosen for my paper need not necessarily take me into labyrinth of figures and data in order to prove that two multiplied by two makes four. Nor need I depart far from my course in quest of examples in order to illustrate the striking contrast between the methods of fair and those of foul competition. Examples of either and both are at our very doors. We behold the one with a feeling of satisfaction and we become inspired with confidence in fellowman,—the sight of the other fills us with disgust and suspicion.

Fair competition courts the light of day. Having nothing to fear and nothing to conceal, it stands upon a pedestal of its own creation, firm and indestructible, in full view of an exacting multitude—being eager to prove and to convince, striving to achieve its success not by the circuitous way of fraud and deception, but by the straighter path of honorable means and honest business methods. Fair Competition believes in the "live and let live" principle. Having learned that lesson in its own school of Experience, it is eager to promulgate its truth to the world at large, fearing no detriment to its own interests, no ill results to its own pocket book. It is like an open book, accessible to all wishing to peruse its pages.

Fair Competition goes into the open market, firmly convinced that merit must and will win in the end, that success, if it is to be permanent, must rest not upon the quicksand of uncertainty, but upon a bed rock of stability.

It makes no rash promises, it shuns reckless statements, it abhors falsifications and adulterations of all sorts, ever aiming to improve rather than to cheapen quality, ever striving to win and to hold public confidence without which success is impossible.

Fair Competition does not cringe, does not fawn and does not sham—such despicable methods being foreign to its business policy. Nor does it concern itself with the affairs of its rivals for the purpose of ascertaining their methods in order to underbid and to undersell them.

If John sees fit to peddle his 4-inch geraniums at 60 or 75 cents per dozen, heralding that fact for months in advance in the "locals," with a view of cornering the geranium market and incidentally to put his rival out of business—it is John's own affair of course. Fair Competition does not attempt to follow his methods, much less to "go him one better," knowing full well that such prices do not cover the cost of production, let alone a living profit—realizing that by attempting to corner the market John will inevitably get into a tight corner himself, and it is seldom indeed that it errs in its judgment.

Fair Competition has mapped out its own way of doing things and it follows its own business methods. It reasons thus: All things being equal—the cost of production plus the cost of marketing the product, plus a legitimate profit—the price to the consumer must be clearly defined and based upon strict business lines, that any deviation from this straight business course, either one way or the other, must inevitably result either in a loss of confidence and custom, if the quality of the product be cheapened, else in financial ruin to the concern itself if quality be maintained at the expense of its legitimate profit.

A sense of propriety deters me from citing examples of concerns that have gone to the wall, because of such reasons, and of others that are heading that way by leaps and bounds.

Having arrived at this logical conclusion, Fair Competition becomes conscious of its own impregnable position. It has cast its anchor, as it were, in the harbor of safety, never fearing the assaults and calumnies of the numerous cheap Johns who would feign see a tidal wave engulf their successful competitor.

I doubt if any of the gentlemen present here will take exception to my assertion that foul competition is a curse to the business world.

Being utterly devoid of business or any other principles foul competition works on the assumption that there are fools—a plenty—eager to swallow the tempting bait—hook and all—called "Cheap."

Cheap! The very word has a sinister meaning if considered in its proper light. Cheap bulbs, like cheap clothes, yield but cheap results. Cheap plants come dear in the end; a cheap design, a floral monstrosity at so many nickels and dimes per foot—is a veritable sore to the eye, as well as an insult to the dead, and so all along the line.

Foul competition does not end here, however. There is a type of it, so low and degraded, so vile and treacherous, that the wonder is how any respectable and self-respecting business man can tolerate the moral stench of its very presence.

Conceived in iniquity and fostered in an atmosphere of fraud and corruption, unscrupulous, morally distorted, suave and cunning—foul competition has but one object in view

and that to attain its ignoble end regardless of means.

In its anxiety to grasp everything within sight, it is by no means content with the "purse" only, which the greatest poet of all times characterizes as "trash" and the slave of thousands. It goes a step or two farther, considering it good business tactics to reflect upon the name and the honor and to attack the reputation of a rival in business. It never occurs to these fellows that "he who steals my purse steals trash, but he that filches from me my good name robs me of that which not enriches him and makes me poor indeed."

Honor and justice mean empty sounds to their ears, and business ethics are an unknown quantity to them. They will not at all hesitate to tell you that the design or the decoration put up by Mr. Brown is not worth half the price paid for it, that the work is poor and that Mr. Brown is a foxy fellow anyway, one who will hear watching. On the road they will make it their business to sling dirt in every direction, in the hope of striking some competitor or other, leaving a trail of moral filth behind them that, to the fair minded man, is nauseating in the extreme.

They will pick up a plant of a rival concern and will pass judgment upon it there and then. In their estimation it is a very poor specimen indeed—the price paid for it being most unreasonable, of course.

New varieties of carnations lend themselves especially to attacks and to "knock-out blows," and these are often dealt without mercy.

"Don't touch it," you will hear them say, "it is a cropper, it has a weak constitution, it makes a measly growth, the calyx bursts, the blooms are ragged, the stem is short, and you had better leave it alone"—and all this assault without having the faintest idea of the true merit or faults of the variety in question.

If it be a batch of lily bulbs going or gone to the bad, as it often happens, here is a splendid opportunity to put in their ghoulish work. As a matter of course, the concern that supplied these bulbs is to be blamed for the poor results. The concern in question, they will tell you, is a back number anyway and is losing prestige and ground every day. In fact, there are all sorts of rumors. Has not somebody told him of somebody somewhere in Missouri or Connecticut who had a similar experience with lily bulbs bought of this very unreliable concern?

In fact Mr. So and So had the same trouble during the past few seasons "but now that he has our bulbs, you ought to see his lilies—perfect peaches and no mistake."

To be sure, men of this ilk soon show their true colors and, like all scamps, they will sooner or later defeat their own ends. Nevertheless, the mischief they create has, for the time being at least, a demoralizing effect upon an otherwise clear business horizon.

How to discourage such abominable practices, how to counteract such pernicious influences upon the trade are indeed vital questions that are well worth our while to consider seriously. If it be true, as somebody has

aptly put it, that "no shady transaction can stand the limelight of publicity," it may be worthy of our effort to turn on that light in its full force.

Says Dr. Torrey, the Evangelist: "A business man who says that every other business man is dishonest or a liar is a liar and a thief himself."

An evil that affects us all alike must not be ignored. A sneak at random, to say the least, is a troublesome creature indeed.

THE MASSACHUSETTS EXPERIMENT STATION.

Paper Read by Wm. P. Brooks, Director, at Massachusetts Conference of Rural Progress.

(Continued from page 860)

Hatch Experiment Station Established.

The Hatch Experiment Station was established under the provisions of an act of Congress applicable to all the states in 1887. It was named in honor of Senator Hatch of Missouri, the author, and chief promoter of the passage of the act bearing his name which provided for national support of agricultural experiment stations. By the provisions of this act the station must be a department of the college, and for this reason the money appropriated under the Hatch Act could not be placed at the disposal of the existing state station which as has been indicated was an independent institution. It did not seem expedient at that time to make the state station a department of the college and so arose the somewhat anomalous condition—two agricultural experiment stations side by side and practically in the same institution. Of the Hatch Experiment Station, President Henry Hill Goodell was made director, which position he held until his death in 1905. Under the organization adopted, it was arranged that all the chemical work required in connection with the experiments of the Hatch Station should be done in the State Station, which received for this work the sum of \$5000 annually, which was one-third of the appropriation from the national government. Throughout the period of the existence of the two stations, duplication of work was most carefully avoided and the harmonious relations existing between the two organizations and the members of their staffs were never in any way disturbed.

Two Stations Unite.

Nevertheless there soon came into existence a feeling that in the interest of economy of administration and work and for the best results the two stations should be united. This feeling strengthened with the passing years and in 1895 the union was effected by act of Legislature, the combined stations taking the name of the younger organization. My part as chronicler of station history makes necessary the mention of but one other change—the readoption of the name Massachusetts Agricultural instead of Hatch. When the latter name was taken, there already existed a Massachusetts station and to avoid confusion some entirely different designation was needed. It was suggested that it would be a graceful and appropriate act to honor Senator Hatch, the author of the bill under

which the stations were organized, by naming the new Massachusetts station after him. The reason for the name Hatch was never generally understood by the public and ludicrous blunders were a frequent occurrence. No other state designated its station "Hatch" though all were equally indebted to the Missouri senator. The uniform custom throughout the union has been to apply the name of the state to the experiment station; and therefore to bring Massachusetts into line and because the name of the state better characterizes the station the change was provided for by act of the most recent legislature and the last annual report and the last four bulletins bear the imprint Massachusetts Agricultural Experiment Station. With the consolidation of the original Massachusetts Agricultural Experiment Station with the Hatch Experiment Station Dr. Charles A. Goessmann who had been director of the former, was made honorary director of the combined stations. He continued in charge of the chemical fertilizer and fertilizer control work until last July when at the age of eighty he retired from active duties and was made expert consulting chemist. The present incumbent after acting in that capacity for a year was made the director early in the year 1906.

The policy put into practice with the organization of the Hatch Experiment Station of subdivision into distinct departments—with one exception under the headship of the professor at the head of the corresponding department of the college—is still followed. The head of the chemical department of the station is not directly connected with the educational work of the college. It is a question too broad and of too great importance to be entered upon in the limited time at our disposal whether in the best interests of station development and usefulness the policy of separate headship for college and station work along leading lines should not be more generally adopted.

Some of the Results.

Conscious as all those connected with station work have been and are that the ideals of the past even—to say nothing of the ideals of the present—have not been reached, a brief statement of some of our more important results must make it apparent that our work has touched and helped the farming public at many points. A complete summary of the work of the station is out of the question and cannot of course be looked for in an address of this character. Some statement of the results obtained, however, seems desirable and, though aware that injustice either in estimates of importance or through omissions will perhaps be done, is nevertheless presented in all modesty and sincerity.

Some of the things then that the farming public owes to the station are: better knowledge of methods of feeding our live stock whether for milk, pork, beef, mutton, veal, or eggs; far more definite information as to the nature and special adaptation of food stuffs; better knowledge of methods of feeding the crops of the field, garden and orchard; more accurate information as to the nature of manures and fertilizers and the results to be anticipated from their use under the

ever varying conditions of practical operations; far wider and more accurate knowledge of the insects injurious to crops and the discovery of much better means of destroying them; accurate knowledge of the nature and causes of many plant diseases and the perfection of methods of prevention; a clearer insight into the relations of environment to the development and health of crops which promises much in the direction of prevention of disease—that ounce worth so infinitely more than the pound of cure; the discovery of the causes operating to destroy or injure so many of our shade trees and the pointing out of methods of protection; and accurate reports as to the merits of new crops and new varieties.

Besides these and numerous other lines of work and discovery which might be mentioned, the station has tested and introduced to the agriculture of the country one crop—the Japanese barnyard millet—which has proved of enormous value throughout a large part of the United States. It is yearly grown upon thousands of acres and one enthusiastic seddman calls it "Billion dollar grass" because as he asserts, its general cultivation would increase our national wealth by that amount annually.

The station secured the passage of feed and dairy laws. It has helped to protect the public health by the analysis of well and spring waters. Finally and among the most warmly appreciated of its benefits, the members of the station staff have annually answered several thousands of letters of inquiry. This line of work, though possibly not the most productive in the direction of general advancement and uplift is nevertheless most highly appreciated by the man who seeks advice or who is in trouble and needs a remedy.

With this very incomplete reference to some of the accomplishments of the past, let us consider the present. Let me endeavor to show you what this engine of modern civilization known as the agricultural experiment station is, what it has to work with, and what it seeks to do.

What the Station Seeks to Do.

The experiment station is a department of the college. It numbers on its working staff twenty-one men, besides several clerks and stenographers. Of these men, thirteen give their entire time to the station; the others serve on the teaching force of the college as well. The organization of these men into divisions corresponding with the two great subdivisions in farming, viz., agriculture and horticulture, and with the leading sciences closely related to agriculture, chemistry, botany, entomology, veterinary science and meteorology, is natural and in the interests of efficiency. These divisions, while pursuing somewhat distinct lines of work, co-operate to the fullest extent the one with the other in all cases where circumstances require such co-operation for the best results.

The experiment station makes free use of such portions of the college estate as are needed in its various lines of work. Its buildings have been provided in most cases by direct and special appropriations from the state. It is supported by both state and national appropriations—about one-third of its

present assured income coming from the state and two-thirds from the national treasury.

The work of the experiment station is of three distinct classes: investigation, control work and dissemination of information. Though most important among the lines of station work and mentioned first, I shall speak of investigation last.

Control Work: The control work of the station has for its object the protection of the purchaser of fertilizers and feeds, and the user of certain classes of dairy apparatus. As related to fertilizers and feeds, the laws providing for this work require, briefly stated, that the seller "shall state what he sells and sell what he states." Those who remember the unsatisfactory character of the trade in fertilizers and feeds before the passage of these laws recognize their great value to the community. The honest manufacturer and dealer as well as the buyer being protected, the trade is infinitely more satisfactory and attains much larger proportions than before the passage of these beneficent laws. The execution of these laws is the province of the chemical division of the station, each being under the immediate supervision of a separate section. The financial support of the fertilizer control work is in part provided for by the license fees which dealers are required to pay, the balance coming from the general funds of the station. The feed and dairy control work is covered by a special state appropriation. These branches of our work employ almost the entire time of five chemists.

It seems desirable that in the near future the station should be charged also with seed control. The character of the seeds offered is now in many cases uncertain and unsatisfactory. They should be guaranteed both as regards genuineness, freedom from weed seed and foreign matter and percentage of germination.

Dissemination of Information.

Dissemination of Information: The station carries its information to the public through a number of distinct channels—most important among which are distribution of its publications, correspondence, object lessons and demonstrations, exhibits at fairs and farming special trains.

The station publications are the principal means of reaching the public. Since organization, the Massachusetts stations have issued 32 annual reports, 176 bulletins, besides a regular monthly meteorological bulletin and numerous circulars. These have treated a wide variety of subjects and have been given a very wide distribution. Our regular mailing list at the present time includes some 20,000 names, and to each address all regular bulletins will be sent.

The correspondence of the station has been previously referred to. During the farmers' busy season, the station will probably average 40 to 50 letters of inquiry daily. To answer many of these letters requires investigation or consultation of authorities, and this work makes a heavy draft upon the time of members of our staff. The work, however, is "present help in time of need," for every effort is made to return prompt replies—in

most cases the day of receipt of inquiry sees the reply dispatched. It is much appreciated, is rapidly growing, and unless it can be otherwise provided for, must be continued.

In the line of object lessons and demonstrations upon private farms in different localities and upon our own grounds, we have done something, but when resources in means and men permit, these lines of work may be much extended, for they surpass the printed page or the spoken word in clearness and strength of impression produced.

Farming special trains, of which we have operated one in co-operation with Vermont and New Hampshire, seem also to constitute a powerful agency for spreading information and driving home truths. These, however, are very expensive—a heavy tax both upon the treasury and the time and energies of busy men. Without the most generous co-operation of the railroads and a larger staff such trains are at present impossible.

Investigation.

Investigation: Experiments are suggested by the name adopted for this institution, and these are naturally regarded as its principal work, but that all experiments are not investigation is by no means always recognized. If, for example, the experiment station selects three supposedly similar and equal areas of land and having applied A's fertilizer to one, B's to another, and left the third unfertilized, then plants to corn, cares for the three areas similarly, harvests and determines which has given the better product, it has tried an experiment. So, too, if two lots of animals are fed in contrasted ways and the results compared, this is an experiment. In either case can the experiment be dignified by the title investigation. The results may have some value or, on the other hand, they may be absolutely misleading, so numerous and so variant are the conditions which in either case determine the outcome. To know that A's fertilizer in the case supposed gave a better crop than B's establishes a presumption perhaps that it is the better, but unless we have looked deeper and can give the reasons we have not made an investigation which deserves the name. The soil and the subsoil must be submitted both before and after cropping to close chemical and mechanical examination. The chemical character of the fertilizers must be exactly determined. The relations of climate to the outcome must be studied. The growth of the plants must be observed and recorded, and their composition determined. By such an investigation—the experiment being repeated until the result under known conditions can be foretold—the underlying causes and laws may be determined, and the discovery of these must have permanent value.

Up to the present time we have had perhaps too many experiments and too little investigation or research in the work of this as of other experiment stations. We are seeking to improve our work in this direction. Such improvement is in full line with our ambitions and is moreover both demanded by the most enlightened public sentiment and required under the last act of Congress relating to the station.

Seed Trade

Numerous interviews with prominent seedsmen during the past two weeks very happily confirm the optimistic opinions expressed in HORTICULTURE of January 4 as to the outlook for the seed trade for the coming year. As predicted in that issue monetary conditions have again become practically normal and this condition has come about more speedily than was expected. However, it is none the less welcome and removes whatever there might have been of doubt or misgiving for the near future, and leaves a prospect as promising as the trade has looked forward to in many years. Let us hope that this promise may bring a golden harvest.

The tendency to resort to arbitration as a means of settling disputes should appeal to seedsmen with commanding force, and particularly among themselves. Any serious litigation among them would be almost certain to reveal the skeleton in the closet, and it has been pertinently said, that however high or however low, every family has its skeleton. While many seedsmen may say there is nothing to conceal from the public, it is still a fact that there are many matters which but half explained as they would be in court, would certainly be of no benefit to the trade, but on the contrary from the fact that they are so imperfectly understood are liable to great distortion and exaggeration to the serious impairment of the seedsmen's prestige.

It seems to be quite generally understood that many efforts have been made by the American Seed Trade Association to establish a permanent board of arbitration to which all disputes between members as well as the trade in general who cared to avail themselves of its services could be referred for adjustment, but so far as the writer is able to ascertain, nothing practical has ever come of it. This is most unfortunate, as the value of such a board composed of say three or five of the most eminent members of the trade would command general confidence, and their decisions would be accepted in good faith by all honorable members. Of course such a body could not enforce its decisions, but it is assumed that those who resorted to it would pledge themselves to abide by its findings. The advantages of such a permanent board over the ordinary method of selecting arbitrators are many, not the least of which would be its really judicial character, and its findings would therefore be more in accordance with the facts than would be possible by the other method. Where each litigant selects an arbitrator, and these two select a third, the only unbiased man is this third party, as the other two are not arbitrators, but counsel for their respective clients, and regardless of facts or the merits of the case, each seeks to win the case for his client, and this is one reason why so many "arbitrated" cases are apparently so at variance with the facts.

The difficulties of forming such a board as has been described are recognized, but it is contended that if the seedsmen of the country appreciated its value and were earnest in their

advocacy of it, the thing could be done. The obstacles are not insurmountable, and always providing that the man who would most naturally be suggested would serve, the rest could be arranged. On such a board men of strong convictions and judicial temperament would be needed. The man of expediency who sits on the fence and gets down on the winning side would never do as an arbitrator, as his verdict would lead always in the direction of his personal interests. Developments of the near future may emphasize the necessity for such a body and cause regret that it does not now exist.

There is still some languid interest shown by canners in seed peas, particularly Admirals, of which there has not, and probably will not be enough to supply requirements, and this, despite the fact that nearly every grower has sold more or less of his seed of this variety. This fact will be noticed next year, and however large the crop from the acreage planted, there will almost certainly be a shortage in Admirals. This applies to all wrinkled varieties such as Advancers, Horsfords and Surprise, and we may as well include Alaskas, though there is less probability of a severe shortage in this variety, owing to more abundant seed stocks.

A few growers who started in to book future canners' peas at but slight if any advance over last year's prices, have seen a light and advanced their prices from 50 to 75 cents over last year's figures. In the meantime, however they have demoralized prices and caused considerable dissatisfaction among canners and no little resentment among the more conservative growers. The stupidity of these men has been commented on more than once, and it was remarked that they would doubtless continue such fool tactics as long as they live. Occasionally they are temporarily hoisted out of their rut by a few of the wiser growers, but easily revert again to their level, and the hoisting process must be renewed every year.

Preparations for the coming canners' convention go merrily on, and predictions are freely made that it will be the largest in point of attendance and machinery exhibits of any convention in the history of the canned goods trade. It is said that contrary to an agreement entered into by the hotel proprietors of Cincinnati and representatives of the canners, the former are raising their rates for the convention week. The agreement is said to have been verbal, and true to their reputation and characteristics the bonifaces are proceeding to violate it after preparations have progressed so far that no change to any other town is practicable. Hereafter agreements with these people or their colleagues in business should be in writing and signed with a forfeit attached.

In discussing the place for the next convention of the American Seed Trade Association with a number of members, Detroit seems to have the call, but what action the executive committee will take is not known even to the members themselves. It is not necessary to boom Detroit to those who know it, but it may be well to

remark in passing, that a more beautiful city in June does not exist, with its many attractive and charming nearby resorts.

Heroic efforts have been made to save as much of last year's sugar corn crop as possible, and much of it has been dried artificially, but there is a woeful lack of vitality, and much that will be palmed off as seed might as well be pebbles as it will not grow 25 per cent. Whether price has yet reached high water mark or will go still higher, will be determined within the next thirty days. Unless it does go higher it will begin to decline before the canners' convention closes.

EUROPEAN CROP CONDITIONS.

The prospects of the winter crops in Europe are by no means so promising as they were a year ago. Yet the best possible condition of the seedlings in early winter gives no guaranty of ultimate success—last year's grain crops being a striking instance in point. A year ago full acreage had been sown and the crops had an adequate snow covering. But the ensuing severe winter and the late spring were beyond the endurance of a large proportion of the plants, and the harvest of winter grains was poor except in Great Britain, France, and Italy. This year generally late harvests and unsuitable weather in the autumn—excessive rain in western Europe and prolonged drought in eastern Europe—greatly delayed plowing and drilling. The lateness of the winter rendered possible

further seeding and a stronger development of the young plants than was thought possible a month or six weeks ago; but at the same time the consequent injury wrought by vermin and weeds has been large. Given the high range of prices so far this crop year, a large increase in the wheat acreage would seem inevitable; yet nowhere in Europe does it appear that such a result has been attained. The weather rendered it impracticable for farmers to carry out their plans in this respect. It is, indeed, improbable that the acreage of winter wheat is so large as last year. In parts of England and parts of France there has been some increase, but in both countries it is thought doubtful by most observers whether even as much land as last year has been sown to wheat. From Russia and the Balkan States come reports of greatly reduced acreage; and while the grain crops in the Balkan States have entered the winter in fairly safe condition, the Russian seedlings throughout the great winter wheat region, extending from the extreme southwest to the Caucasus, are in a precarious condition. In Hungary, as well as in the more southeastern countries, the plants are largely late sown

EUROPEAN CROP CONDITIONS.*(Continued from page 71)*

and are abnormally weak, and therefore particularly subject to damage from cold. While the greater part of Europe has experienced freezing temperature, snow is much less general than usual at this time of the year. Even in the face of the present gloomy outlook, however, it is by no means impossible that, if the seedlings are favored by a mild winter, a normal harvest of winter grain may be reaped in 1908.—From January report, Bureau of Statistics, Department of Agriculture.

MAINE VIEW ON FREE SEEDS.

To be sure it is not quite time to plant garden seeds up here in this part of Uncle Sam's big farm, despite the warm weather and the open winter, but down in Florida and just over in California the farmers and gardeners are putting in the early seed, and even in Washington the congressmen are getting ready for the usual supply to send to their constituents.

Of course congressmen must have their beet seed and turnip seed and so the House of Representatives has passed a deficiency appropriation bill setting aside \$50,000 for the purchase of more seeds for free distribution.

It was only last winter that Congress was busily engaged in talking about possible total abolition of the free seed graft. If memory is correct the movement even went so far that a committee report advised the abandonment of the wasteful appropriation for that purpose. Of course the reform was not successful. Moved by the touching appeals of men like Representative Chandler of Mississippi, who said that if no seeds were distributed by him his "dear old farmer friends" would look at him reproachfully and say: "You raised your own pay, but to us you are not willing to give even so much as a bushel basket of beans," Congress clung to the old idea of free seeds.

And now what do we discover? Not only has all the free seed money been spent, but more, too. It is going to take an extra \$50,000 to make up for the congressmen's overdrafts on their standing graft account.

The Commercial has steadily opposed this large annual draft on the treasury for free seeds. It has done so because in general the seeds sent out are of the old standard varieties which any one can purchase at all country stores for a few cents, and because in general many of the seeds are worthless.

It would be far better for Congress to make larger appropriations for the work of the several state experiment stations, and let the officials of the stations experiment with new seeds, find out what plants are adapted to the several states and ascertain what new varieties would be an acquisition to those we now have. In that way much good would come of the money so expended.

No appropriation for saving the White Mountain forests from destruction and for preventing the rivers from drying up; but thousands upon thousands of dollars for useless garden seeds. Such is congressional economy—or congressional graft. Down with it!—Bangor Commercial.

ORNAMENTAL HORTICULTURE.

Extract from a paper read before the Civic Club of Portland, Me., by Prof. Herman Beckenstrater.

The growth of any community along the lines of ornamental horticulture indicates progress along the lines of culture and refinement.

No doubt America is at the present time somewhat behind European countries in this line of work, but this is not strange, for long before the birth of our nation this art has had abroad a comparatively free field in which to advance. While in the pioneer century there was naturally a lack of means; today wealth, rapidly developing taste, and in fact everything needed for fostering the fine arts is with us, and the time is not far distant when we must excel in this as we do in most of the useful arts and inventions.

There is a general awakening all over the land. The larger cities have already developed large and extensive park systems and more land and money is continuously being appropriated to this cause and from the great amount of good that this is doing to the millions in the crowded cities many are asking why it was not done long ago. In large, populous centers the acquisition of land is becoming more and more difficult and expensive if not impossible, but in our smaller cities where land is still cheap, the city should not delay in acquiring parks and play grounds for the generations to come. It will never be easier and cheaper than now, and if any wishes to build a monument to his honor, I know of no better way than to donate a tract of land to his city for park purposes. Such a monument will be more enduring and beneficial to the future inhabitants than the endowment of a library or an institution of learning.

Where Charity Begins.

We are a missionary people—we are willing to spend millions for the conversion of supposed heathens in foreign lands, but we often forget that charity begins at home. There are millions of children and grown people in the crowded tenement houses in our large cities who never tasted the real pleasure of out-of-door life. Crimes of all kinds flourish in the crowded cities, and what else could we expect? There is nothing for the mind to do but brood over its own condition. Give them a chance to get acquainted with nature, with trees and flowers and a new vista of life will suddenly open up to them. To alleviate and better conditions like these is real missionary work.

Does Ornamental Horticulture pay? I would not cut down that tree for a hundred dollars, is an expression one may often hear from property owners, as they point to some favorite. And often the valuation is placed much higher than that. Now what did that tree cost? Perhaps \$5.00 fifteen years or so ago for the tree, preparing the soil and planting. From the time the roots took hold upon the soil and a beautiful show of foliage appeared increasing year by year in size, soon giving a pleasant shade, it has been a constant source of delight. Was the setting of that tree profitable considering the value at which it is now appraised and the pleasure it has afforded? The decisions of courts in this country have proven in more than

one instance that trees have property value and in many cases from \$50 to \$200 have been awarded for the destruction of a single shade tree.

The gains from ornamental horticulture cannot alone be computed in dollars and cents. It has been said that "The strength of America lies not in the roar of its cannon but in the cheerful fireside of its people." Whatever adorns one's home—be it in city or country—nobles his domestic life, strengthens his love for country nurtures the better elements of the natures in those who are thrown in contact with such improvement. To promote a love for trees, shrubs, vines and flowers by cultivating and studying them, develops in children a love for the beautiful in nature, in art and still more in character. Nothing is truer than that the love for nature sharpens the senses and quickens all the intellectual faculties. Were parents to provide to the fullest practical degree the simplest means for encouraging the love for ornamental gardening they early secure for the young a source of high enjoyment that is unknown elsewhere, one which elevates the mind and fills it with noble aspirations. Besides these things the mere spending of time on the part of all and especially of women and children in the exercise and enjoyment that comes from associating with and caring for plants is highly conducive to health.

Have a Plan.

A carefully prepared plan should precede all attempts in extended landscape gardening. It pays to do well whatever is done in landscape gardening. In starting such work it is too often undertaken without any thing like a definite plan. It would be quite as reasonable to work without a well considered plan in building our houses, yet we find that large sums of money in the aggregate are paid to architects for house plans while to the surrounding little thought is given to calling in the services of the trained gardener. When the day comes that the landscape gardener will be consulted along with the house architect in matters of home improvement, then a less sum of money will go farther to the purchase of real beauty, pleasure and comfort than when the latter is alone employed.

Time for Producing Effect.

There are many who would like to plant trees and shrubs but are kept from doing so by erroneous notions as to the time it will take to produce results. It is possible so to treat trees that they will not grow the same number of inches in 10 years; but on the other hand they may by proper management reach a height of from two to three times as many feet in 10 years from planting. The difference lies in matters that ordinarily are in a large degree without our control. When trees remain almost at a standstill for a long time it indicates either that they were of poor quality in the beginning or in rare cases that the soil cannot be fitted to their wants, but very commonly that they are deprived of the food and moisture they would appropriate if they had the chance.

It is well to know that as a rule shrubs come to maturity quicker than trees. Planted in good soil, these

NEW ROSE--MY MARYLAND

I am booking orders now for this new rose. It is a beautiful salmon pink with long buds. Easy and strong grower. Makes no blind wood, has averaged 22 flowers to a plant since the first of October, has long stiff stems. Some of the largest growers who have seen it have bought from one to three thousand plants.

PRICE, 2 1-2 inch pots, \$5 per dozen, \$25 per 100, \$200 per 1000.

STOCK LIMITED

JOHN COOK, 318 N. Charles St., Baltimore, Md.

GERANIUMS

WE have an immense crop of good plants from 2 inch pots, ready for immediate shipment at prices running from \$2.00 per 100 up for good standard sorts. We will send one thousand in twenty varieties, our selection, for \$18.50; five hundred for \$9.25.

ALLIANCE—A Hybrid between a Zonal and an Ivy and which has retained all the good points of both parents, the beautiful soft finish of an Ivy and the hardy constitution of the Zonal. Its color is the most exquisite shade of delicate lilac white, feathered and blotched crimson rose, flowers semi-double, habit dwarf, an ideal pot plant in every way. Strong plants from 2 inch pots, \$1.00 per doz., \$6.00 per 100.

IVY GERANIUMS—In good assortment, \$3.00 per 100. We make the special offer for a short time of \$25.00 per 1000, our selection of five kinds, 500 for \$12.50.

CACTUS GERANIUMS \$1.00 per doz., \$8.00 per 1000.

For **Dahlia Root** and Miscellaneous stock see issue of Dec. 28th. **Cash with order.**

R. VINCENT, Jr. & SONS CO., - White Marsh, Md.

take hold quickly and in a few years show beauty in habit, foliage and flowers that is scarcely excelled in after years, though they may increase in size. Planting is often delayed from year to year until sufficient time has passed to have allowed the trees to make large growth had they been set when the idea was first entertained. Almost any shrub or tree, with good treatment, may be counted on to reach a very pleasing size in from two to six years from planting. How soon such a period slips by! To illustrate permit me to cite the experience of the capitol city of my own native state. Outside of the Capitol and university grounds there were no public parks in Madison, Wisconsin, 15 years ago. Now there are 300 acres of parks connected by some 30 miles of beautiful parkways. While Madison is naturally a beautiful city, it contained besides beauty spots, many swampy and unsightly regions. Chief among these was the marshy region along a sluggish stream that connects the waters of the two lakes through the peninsula upon which the city is situated. This was a dumping ground for 50 years. It had become so ugly and unsightly that we used to shut our eyes as we passed in and out of the city on the trains. At last a crusade was started against it and this region was practically turned into a paradise of beauty during my college days. Another park which was nothing but a marsh less than 10 years ago was similarly transformed and is now one of the most delightful little parks in the entire Northwest.

It is well to bear in mind that "the way to get started is to start." To debate too long on pros and cons consumes energies without result. Do something and in the course of your

Obituary

Victor S. Dorval.

Another one of the old-time gardeners has gone. Victor S. Dorval, who died at his home in Woodside, Long Island, N. Y., on January 12, was born in Dijon, France, 75 years ago. He received his first horticultural training in the park of Boule d'Or in Dijon. Thence he went to the Barrillier Greenhouses of the City of Paris under La Meutte and then to Buenos Ayres as gardener to a priest who accompanied him from France. Shortly after he went into the sheep business, but the war broke out and he was left penniless. He came to the United States about 1870, and after occupying positions in Washington, Whitestone and Newport, finally settled in Woodside about 1874 and conducted a florist business until six years ago, when he retired, leaving the business to his two sons, Victor S. and Edward J. Besides these he leaves a widow and one daughter. Carnations, buibs and bedding plants were his specialty. He has furnished

VICTOR S. DORVAL.

the Trinity Corporation with the latter every year since 1878. In addition to his Woodside establishment he had a fine place at Great Neck.

Mr. Dorval was a member of the New York Florists' Club, and until quite recently of the Society of American Florists. He was a congenial, open-hearted, lovable man, of sterling character, and will be mourned by a large circle of friends and neighbors. He has been in failing health since last summer.

Marston B. Bunker.

The sudden death of this well-known Boston florist comes as a great shock to the trade. As announced in our issue of last week, Mr. Bunker went, on Wednesday, to the Boothby Hospital, where he underwent a surgical operation on Saturday and from the effects of which he died on Sunday. Mr. Bunker was born in Cambridge, April 25, 1859. As a young man he entered the flower business in Boston, and for a number of years had charge of the flower stands at the Parker House, Young's Hotel and the Touraine. Later he opened a

HENRY M. ROBINSON & CO., FLORISTS' SUPPLIES 15 Province St., and 9 Chapman Pl., BOSTON

store in Beacon street and for the past nine years has been located in City Hall avenue, where he did a good business. He leaves a widow, son and daughter to mourn the loss of a devoted husband and father. The funeral took place on Wednesday, January 15, from his late residence in Somerville

Sol. D. La Rosh.

Sol D. La Rosh, one of the pioneer residents of Pekin, Ill., died on January 4, at the age of 67. Mr. La Rosh attained a state reputation for the quality and variety of fruit raised on his farm in Groveland township.

Fred Thayer.

Fred Thayer, at one time in the florist business at Westfield, Mass., was killed suddenly at N. Wilbraham on January 4.

Mrs. Lydia B. Manning.

Mrs. Lydia B., wife of the late Jacob W. Manning, of Reading, Mass., passed away on January 9.

NEWS NOTES.

Jacob Becker has added a new house, 22x186, to his already extensive range at 49th and Chestnut streets, Philadelphia. The old plant is being conducted as usual.

Robert Craig says that all *Dracaena terminalis* plants ought to be sponged over now with a mild solution of fir tree oil. Weak and unworthy plants are not worth their board bill.

Fire in the early morning of January 6 destroyed the main greenhouse at Ervin Hayden's, Marblehead, Mass., and his entire stock was ruined by the smoke and cold air. Loss, \$3000; no insurance.

Nathan D. Pierce, proprietor of the Norwood Floral and Home Nursery Companies, Norwood, R. I., has leased the Standard Greenhouses. This gives him an area of 20,000 square feet under glass which will be devoted to carnations and violets.

Frederick Law Olmsted and other experts are formulating plans for beautifying Baltimore's group of public buildings, along Fayette street and the market buildings on Center Market Place. It is proposed among other things to convert Jones' Falls into a covered stream and construct a boulevard along its entire length from Baltimore street to North Ave.

The State Commission on Industrial Education of Massachusetts have plans outlined for about twenty high schools of agriculture at convenient distances geographically and varied according to the needs of the sections in which

NEWS NOTES.

At Newport, R. I. the wind completely demolished a greenhouse on the estate of Otto Ehrhardt.

High winds on January 7 did considerable damage to the greenhouse on the Winslow estate, North Beverly, Mass.

Poole & Purlant, having disposed of their business at Bellefontaine, have located at Washington Court House, O.

Schedules in bankruptcy of J. M. Hodgson, florist, of New York and Newport, show liabilities of \$26,460 and assets, \$7,524; 170 creditors.

An interesting talk on Italian gardens was given by J. K. M. L. Farquhar of Boston before the Worcester County Horticultural Society, Worcester, Mass., on January 9.

The recent accounts of experiments to force plants by use of electricity brings out the fact that Dr. Lyman Larkin of Wrentham, Mass., was a successful practitioner in that line nearly half a century ago.

C. S. Strout of Biddeford, Me., has received eight prizes on his carnations and chrysanthemms from the Massachusetts Horticultural Society. As they were the only prizes distributed in that state, Mr. Strout attaches great value to them.

BUSINESS CHANGES.

The Piedmont Floral Co. is now located at Hotel Athens, Broadway, Oakland, Calif.

R. S. McMurray has purchased the greenhouse business of Poole & Purlant, Bellefontaine, O.

Miss A. M. Browne and Mrs. B. O. Weisenger have bought the business of the Beaumont Floral Co., Beaumont, Tex.

FLOWER MARKET REPORTS

The rose market holds up satisfactorily thus far, but, outside of this, conditions are quite blinky. Carnations are coming in with a rush and there is no demand equal to the occasion, so prices have sagged badly and accumulations are the order in the wholesale marts. Violets are suffering to some extent from the same trouble, as is also all bulbous material. From all obtainable information, however, this market is as well-balanced at present as any in the country, and price fluctuations are moderate. The market quotations as given in HORTICULTURE are reasonably near the actual returns received by growers from day to day, and will be found on investigation to cover the situation as well as it is possible in a weekly report.

Trade was quite active
BUFFALO the past week, the weather being favorable especially at end of the week, it being more like spring than mid-winter. Floral work has been much in evidence, which has helped to clear up a little surplus stock, white carnations materially being much in demand. Lawsons were much too plentiful, especially the poor grades. Roses were a trifle more plentiful than heretofore, and demand was good on all lines of Teas. Beauties are in fine quality, but not too abundant, and prices holding firm. Mignonette, lilies, narcissi, peas, Roman hyacinths, lily of the valley, violets and freesla are in good supply.

At present everyone is taking things rather easy. While there are a good many orders daily there is plenty of time and material to fill considerably more. Fortunately most growers are off crop or else there would be a great deal of waste. In a couple of weeks we can expect a much heavier cut in almost every line and we have reasons to expect business to pick up by that time. Bridesmaid rose will have to give more way to La Detroit in this summer's planting; it will be more propagated than ever. Winsor and White Enchantress are also driving some of the other carnations from the local market. The Michigan Cut Flower Exchange shipped 300,000 fancy ferns last week; their weekly consumption is 150,000 on an average. Christmas orders called on them for most everything in the florist line, the principal items being carnations, 20,000; violets, 25,000; poinsettias, 3,000; boxwood, 1-2 ton; fancy ferns, 250,000.

The past week has been a fairly prosperous one with the trade, making allowance for the usual lull at this time. Beauties and tea roses are in a supply that is equal to the demand with prices a shade less than a year ago. Carnations are of fine quality and supply large. They have also suffered in price. Smilax is over-abundant while maiden-hair ferns continue scarce. Tulips, daffodils and peas find ready sale at good figures. There seems to be a good trade in all kinds of greens, galax leaves in par-

ticular. Tomlinson Hall market reports trade first class, wholesale as well as retail.

NEW YORK There is little to be said about conditions in the market at the present time, beyond stating that the falling market noted in our last report has continued steadily on its downward course and that prices are consequently from twenty to thirty per cent, lower on many leading things. Quality varies with the different growers, some of them sending in as fine material as ever was seen in this market and others sending the other kind. Neither are getting rich on the proceeds, but of whatever there is in it the first gets the lion's share, as he should. The variety of flowers in sight is increased by the addition of tulips, trumpet daffodils, calanthes, wall-flowers, freesias, callas and forced shrub bloom.

The marked improvement noted in our last week's report is not sustained this week. In fact, a slight fall is noticeable in many staples. The general market lacks snap. American Beauty and other roses dropped a little, with the exception of Brides. These are quite scarce. Carnations are easier. Violets and lily of the valley are very fair stock, but there is little go to them.

ENOUGH SAID

List of Advertisers

Table listing various horticultural businesses and their corresponding page numbers, including entries like Alleo J. K., American Nursery, Aschmann Godfrey, Atlanta Floral Co., etc.

CATTLEYA PERCIVALIANA ALVA.

This handsome cattleya, which forms the subject of our frontispiece, was collected in Venezuela in the Andes by Ordóñez Bros., and is now in bloom, bearing two flowers, and may be seen at Madison, N. J. The color of the flower is pearl white with a yellow throat. The flowers are very large.

PERSONAL.

J. F. Sullivan of Detroit is confined to his house by an attack of La Grippe.

A. Pericat, of Collinsville, formerly of Philadelphia, is very ill with pneumonia.

J. W. Rodgers was re-appointed superintendent of parks at Cincinnati, O., on January 1.

Detroit visitors: Harry Heim and Thos. McGee, Toledo; B. Eschner, Philadelphia, Pa.

Phil. Kessler, the New York wholesale florist, is getting ready to take a trip to Bermuda, combining business and pleasure.

Friends of J. T. D. Fulmer of Des Moines, Iowa, will be sorry to learn of his severe illness at his home. Pneumonia is the trouble, but the best is hoped for.

THE HAPPY GARDENER.

When you die, earth-lover,
Flowers shall be your cover;
Braver than the purple pall
Spun to veil dead kings withal.
You are weaving, day by day,
Beauty for the sun to slay,
The fleeting pageant of delight
That dwells within a garden bright.
You this Persian carpet spread,
And named it a sweet-william bed.
You painted this great lambent screen
Of larkspur, lilies white between.
You hang vine garlands low and high,
Ripe for Bacchus, reeling by.
You are the over-lord of grapes
And plums, and all alluring shapes
To win the eye and tempt the tongue,
Globed liquid honey, leaves among.
Living, you, an earth-born guest,
Are of men the mightiest;
And when you die, earth-lover,
Flowers shall be your cover.
—Alice Brown in Harper.

A RECORD FLORIST.

John H. Thiry, the 86-year-old School Commissioner of Long Island City, L. I., received many congratulations yesterday on the arrival of a small daughter at the Commissioner's home at 181 Academy street, in the Dutch Kills section of Long Island City. The newcomer is the fifth child born to the Commissioner's young wife since their marriage in 1896. She had come to this country with him from Belgium, and when Mr. Thiry's health broke down thirty years ago, the couple moved to Mr. Thiry's present home in Long Island City, where he devoted himself to raising fruit and flowers. Mr. Thiry said yesterday that he expected to live to celebrate his 100th birthday. N. Y. Times, Dec. 29, 1907.

ADVERTISE CARNATIONS.

Next issue will be full of interesting news for carnation growers. It will CIRCULATE at the Carnation Convention. See the point?

FLOWER MARKET REPORTS.

(Continued from page 77)

Orchids are selling fairly well. The mignonette supply is falling off but what is arriving is of good quality. Snapdragon and lilac have made their advent in limited quantity, and are a welcome addition. Trumpet narcissi are also coming in freely, and find ready buyers. Sweet peas are fine but prices are much below the average.

Since the holidays as a whole prices have not sunk very much, and there are no signs that they will go down in the near future, at least not as long as business keeps as good as it has since the beginning of this year. Carnations and roses are getting more plentiful now—at least the home growers are able to supply the market.

Business has been WASHINGTON quite brisk for the past week, and prices keep up. There is a decided glut of lily of the valley and also of cattleyas. The demand for carnations entirely equals the supply and prices keep up.

John T. Allan, who has for several years been the efficient captain of Hose Co. No. 3 of the fire department of Newport, R. I., has resigned. Among the candidates for the position thus made vacant are W. H. Maher and P. H. Reynolds, the former a florist and the other a gardener.

WANTS, FOR SALE, ETC. Advertisements in this column one cent a word. Initials count as words. Cash with order. All correspondence addressed "care HORTICULTURE" should be sent to 11 Hamilton Place, Boston.

SITUATIONS WANTED

SITUATION WANTED—As foreman or section man on an up-to-date place of roses; good grafter and propagator. American, married, aged 39, sober; good wages expected or will accept good private place. Have had charge for a number of years. F. C. Searies, Closter, N. J.

WANTED—Position with reliable wholesale or retail seed house as seedsmen; six years' reference with trustworthy seed firms; nationality, Scotch. Address Seeds, care Horticulture.

SITUATION WANTED in general greenhouse work; single, age 35, five years' experience, commercial. Address W. W., care HORTICULTURE.

FOR SALE

FOR SALE—On account of the recent death of my husband, I desire to sell our green house property located at Farmington, Conn., consisting of seven greenhouses, covering 12,000 square feet of ground, planted principally to carnations and violets. Stock in excellent condition, free from disease and showing lots of bloom at present time. Business established twenty-eight years and a ready market for entire output. With two acres of land, and a six-roomed cottage, with all modern improvements; stable, sheds, implements, etc. A splendid opportunity to a quick buyer. Address for further information, terms, etc., to Mrs. Hugh Chesney, Farmington, Conn.

FOR SALE—A large consignment of 16x24 double thick American glass, A and B quality. For further information write Parshelsky Brothers, 59 Montrose Avenue, Brooklyn, N. Y.

Is Your Name In The Above List? If Not, Why Not?

BOSTON HEAD LETTUCE AT IRON-DEQUOIT, N. Y.

The most important salad plant among the varied cultivated vegetables is the lettuce, of which there are more than a hundred varieties. It is in demand all seasons of the year, and is grown successfully in greenhouses, hot-beds and outdoors. The Irondequoit gardener has learned that to succeed he must have patience. This salad plant is essentially a cool-weather grower. It will stand slight frosts and come out all right. This sometimes happens with a gardener who is slow in getting heat connections made in the fall. What the Irondequoit gardener considers an important item in the culture of lettuce, is the choice of seeds and the best seeds procurable are bought. In the indoor crop, the seed is sown thickly in rows about two inches apart, and in a small bed. As the seed germinates and the young plant reaches a certain height the beds are thinned out and the stronger plants transplanted. When still larger many of the plants are again transplanted. By continual sowing and transplanting and selling, a succession is kept up the year around in many of the houses. Boston Head lettuce is considered the best for greenhouse cultivation. The tastes of the consumer must be catered to, and the grower after a good many years has found that Boston Head is the kind for all-round sales. Some consumers prefer the soft, delicate flavored varieties, others want the hard texture of the crisp sorts. The Boston or head varieties seem to fill these requirements. For general sales the head lettuce is most in demand during winter. It is a splendid shipper, and will keep fresh for several days on the local markets.

Lettuce growing has its disappointing features. Cloudy weather causes them to become mouldy and "damp off" if the soil condition is not right. Then plant lice are another nuisance, and fumigating with tobacco stems is the antidote.

The gardener has a "mascot" in every greenhouse. He is a quiet little worker, but he keeps the bugs scarce. It is the little "American Toad," and he is the greenhouse man's best friend in this line of work. They are especially of value in catching snails.

H. R. PEACHEY.

The Gardeners' Chronicle, London, for December 14, 1907, publishes a communication from a French correspondent concerning an insect (*Malacosma lusitanicum*) which has done great damage and caused considerable loss to the horticulturists in the neighborhood of Toulon who grow narcissi for the cut-flower trade. The beetles of this insect are abundant and well known in the central region of France, but the larval form has hitherto been unknown. It is the latter which feeds on the bulbs and several of them are sometimes found in a single bulb. Disinfection of the soil by means of bisulphide of carbon, applied at the rate of 240 lbs. to the acre, is recommended as a remedy.

"SCALECIDE"

HAS MADE SPRAYING EASY THEN WHY NEGLECT YOUR TREES?

The N. Y. Herald, November 17, '07, says: "The chances are about a hundred to one that you have the San Jose Scale on your place and do not know it," and advises the use of "SCALECIDE." This is good advice. "SCALECIDE" has been tested and tried, and found thoroughly effective. The same yesterday, to-day, and all the time. One gallon makes 15 to 20, ready to use, by simply adding water.

Prices: 1 gal., \$1.00; 5 gal., \$3.25; 10 gal., 6.00; 50 gal. bbl., \$25.00, F. O. B. our factory. Order to-day. Write for booklet W and free sample.

Then there is the downright practical side of U-Bar houses, the side that means more flowers, or vegetables of finer quality with less care and expense than in any other houses constructed any other way. The reason for this is, in short — *more light*. You see there is no gutter at the eave—no heavy members—the glass is spaced 24 inches instead of 16 inches. Every structural detail has been reduced to the smallest possible point. Still with all this extreme lightness of construction, there is not a more rigid, enduring house made—and it is the U-Bar that does it. The catalog, although filled with U-Bar houses, both exteriors and interiors, also shows plans, sections and all the interesting structural details that you like so well to know—Send for it. DAHLIA CHARLES LANIER

BEST NOVELTY OF THE YEAR

We shall not describe it ourselves—the Press has already done so.

... WHAT THE PRESS SAYS ...

From the New York Tribune, Sept. 23, 1907.
At the Dahlia Show at the American Institute Exhibit.

Probably the most striking of the new Dahlia specimens is a brilliant yellow, its round blossom as large as the head of a baby, from the Charles Lanier Estate at Lenox.

Standing high and proud on their long stems in a huge yellow vase in the centre of a table, these magnificent blossoms caused audible exclamations as they caught the eyes of the visitors. This is their debut in New York, although they were recently shown in Boston.

From the New York Times, Sept. 27, 1907.
Newest Specimen at the Dahlia Show.

A large number of men and women visited the big dahlia show at the American Institute, 19 West Twenty-fourth St., yesterday afternoon. There were at least 200 varieties of the finest and newest spec-

imens of this beautiful Fall flower, and it would be impossible to tell how many colors and shades.

The most noticeable blossom was a big Charles Lanier which is known as the "show" dahlia. It is the old-fashioned quilled flower but of a mammoth size and beautiful yellow color. This was raised by A. H. Wingett, on the estate of Charles Lanier, Lenox, Mass., and named for the proprietor. Mr. Wingett has been at work developing the plant for the last three or four years, and it has now been awarded first prize and a certificate, which is a scientific sanction of it as a new flower.

The Charles Lanier dahlia probably will be sold before the exhibition closes and should bring a good price, for it stands alone in its class.

From Horticulture, Sept. 7, 1907.
Dahlia Show at Boston.

The dahlia show at Horticultural Hall, Boston, this week is unquestionably the

finest exhibition of dahlias ever given in America.

The sensation of the show is A. H. Wingett's Charles Lanier, a four-year-old, deep yellow in color, which may be appropriately described the Col. Appleton of the dahlias. The flowers, which came in excellent condition all the way from Lenox, are shown in one of the large vases occupying the centre of the stage in the lecture hall.

From "Dahlia News," September, 1907.
New Seedling Show Dahlia "Charles Lanier."

Twenty-four enormous perfect blooms of a bright yellow were exhibited in a large Japanese vase, and in effect it equalled the best vase of chrysanthemum. The special merit of this variety is the extreme length of stem, three feet or over, which makes it a most desirable variety for cutting. In size it equals any exhibition variety shown.

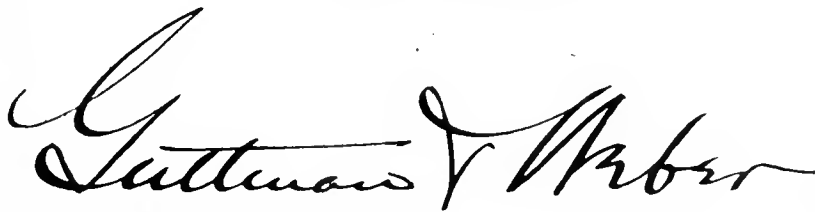

Plants to be delivered in May. Special prices to the trade only, as follows: Per dozen plants, \$3.50; 25 plants \$6; 50 plants \$11; 100 plants \$20. Orders to be filled in rotation as received.

 LA FAYETTE, IND.

Winsor and White Enchantress

Strong Rooted Cuttings Now Ready for Delivery

WINSOR has proved to be the finest carnation in the light pink class. We sold a large quantity of it last year, but there will be a much larger sale for it this year. At the English Carnation Show held in December, it was the winner in the light pink class. It is doing well everywhere and will supplant everything in that color.

WHITE ENCHANTRESS will occupy the same position among white carnations that Enchantress does among flesh pinks. It has all the good qualities of the common Enchantress,—long stem, earliness, large size, freedom, etc. In our opinion, it is by far the best white carnation ever introduced.

We have a splendid stock of both Winsor and White Enchantress ready for immediate delivery, and will guarantee perfect satisfaction with the cuttings supplied. Do not wait, because the demand for these varieties is bound to be enormous. **Order early, while we can promise immediate delivery,** and secure gilt-edged stock. We have a large stock of both of these varieties, and all our cuttings are heel cuttings, taken from flowering stems. On account of the quantity that we are growing, we are not obliged to over-propagate, and our stock is in the most perfect and healthy condition.

Strong rooted cuttings from sand, \$6 per 100, \$50 per 1000. Extra strong transplanted cuttings from soil, \$7.50 per 100, \$60 per 1000. Strong established pot-grown plants \$9 per 100, \$75 per 1000.

Cyclamens in England

The accompanying illustration shows one of the cyclamen houses at the Royal Gardens, Sandringham, and was taken exactly thirteen months after the seed was sown. The cyclamen being a great favorite with King Edward and Queen Alexandra quite a large number of plants have to be grown each year, and the high quality which is maintained year after year, reflects great credit upon Mr. Cook, the able superintendent of this noted establishment. The Sandringham strain of cyclamen is now well-known in England, Mr. Cook having made these plants a specialty for many years, and devoted a great deal of time and labor in bringing the strain to its present high state of perfection. The methods which he followed are most interesting. A few years ago he collected from various sources the best seed which he could possibly obtain. Not being satisfied with the varieties which then existed, he took in hand regular and systematic fertilization of the finest, having in view richness and substance in the flower, symmetry and length in the stem, and glossy marbled foliage. The results obtained I may say, have quite exceeded his expectations. Personally, I have never seen a finer lot of plants, and I am certain that he possesses at the present time a strain which cannot be equalled in Britain. Surely this system of private selection is well worthy of emulation by growers on this side of the Atlantic.

British Horticulture

SWEET PEA TRIALS

The National Sweet Pea Society has arranged to have another series of trials of new varieties at the University College Gardens, Reading, this year. Last year's trials proved very successful, demonstrating the

practical value of this side of the Society's work. The chief objects of the trials are to enable the committee to have an opportunity of inspecting the new varieties growing under similar conditions. It is intended to grant awards of merit or first-class certificates to those varieties in the trials deserving these awards. A glance at the seedsmen's lists reveals the fact that there are too many varieties listed, and the multiplication of novelties only serves to confuse growers when a selection is made. The decision of the committee to only grant awards after the novelties have been included in the trials is well advised. It will prevent needless duplication besides allowing the committee to ascertain whether a variety is properly fixed. There have been disappointments in the past when a certificated new-comer was found to be totally unreliable. When it is found that the certificates have been awarded after a full and careful trial, such as that which can be relied upon at Reading, their value will be enhanced in the estimation of growers.

SOME NEW VARIETIES

Amongst the many new varieties which are being sent out this year the now favorite Spencer type, with a wavy form, appears to predominate. St. George, which is described as of a brilliant carmine-scarlet tint, of the Spencer type, received the silver medal for the best new variety in 1907 at the National Sweet Pea Society's show, besides a first-class certificate. It also received an award of merit from the Royal Horticultural Society last summer. Princess Victoria, which was so much admired, when exhibited last summer, is a delightful shade of soft pink somewhat similar to Mrs. Hardcastle Sykes. It received an award of merit from the National Society and from the Royal Horticultural Society. The Marquis is a mauve Spencer, and has also received an award of merit from the National Society. Norah Unwin is a decided advance on Gladys Unwin or Frank Dolby. The pure white flowers are of fine form and substance, and it is likely to prove a strong rival to Dorothy Eckford. Other new aspirants for fame are: Lord Nelson, navy blue; Evelyn Hemus, pale creamy with carmine edge; Clara Curtis, a cream Spencer; Rosie Adams, rosy mauve; Silas Cole, named after the raiser of Countess Spencer, of a darker shade than the former variety; Pride of Althorp, lavender blue; Lord Althorp, an improved Helen Lewis; and Miss Delia Spencer, rose pink.

NEW SINGLE FLOWERED CHRYSANTHEMUMS

Amateurs are recognizing to a larger extent the value of this section of chrysanthemums. The following is a list of new varieties which are being sent out: Lady Mayoress Sayers, yellow; Pink Felicity, bright pink; Felicity, ivory-white, large, prominent yellow disc; Victoria, yellow; F. W. Smith, rose-pink; Mrs. C. Radclyffe, rosy-carmine, with a clear white ring next the disc; Exquisite, crushed-strawberry; Blanche, white; William Grix, canary yellow; Ruby, late, ruby-crimson; Mrs. N. E. Barnes, yellow, flushed bronzy red; Mrs. Robert Armitage, terra-cotta; Mrs. H. A. Witt, bright mauve, with a narrow zone of white next to disc; Maisie Lyon, deep rose.

A NEW WINTER WASH

Some good results have been obtained with a new winter wash known as V1 fluid. Mr. Walter E. Collings, head of the Department of Economic Zoology in

the University of Birmingham, who has conducted some exhaustive experiments with the preparation, records: "In one orchard where it was tried on about a hundred acres of apple, pear, and plum trees, and 34 acres of various fruit trees, apple-sucker, apple aphid, plum aphid and mussel scale were exceedingly bad last year. A careful inspection was made in March of some thirty or forty of the worst-attacked trees, and not a single egg of any of these pests could be found alive." Another disadvantage is that hitherto Mr. Collings has had to use one preparation for insect and another for parasitic fungi, such as the moulds, mildews and rusts, but this new fluid is said to be as deadly to the latter as to the former, and a single spraying will suffice.

W. H. Adsett.

Tomatoes Under Glass for Early Summer Crop

It is only within the last few years that tomatoes have been grown to any great extent for an early summer crop under glass, around Boston. Many growers seeing others succeed are now taking up this industry. The credit, however, belongs to those who embarked in the business and in spite of the large quantities coming from the South showed the people that the home-grown article was so much better and that a price could be realized from them in proportion to their value. Many flower growers might add something to their revenue by growing them. Houses that have held Easter stock, violets, or others that are not paying, might be planted with tomatoes when otherwise they would be idle. It is not necessary to plant early to have an early summer crop. Any time in April or even the beginning of May is right. Your big pick will then be on in the early part of July which is the time they sell the best. The prices may not look big to some,—10 to 15 cents per pound,—but at that season of the year what else could you get any more out of? Well-grown plants will bear six pounds and over and the space occupied is about twenty inches square. Of course there is the growing on of the young plants which should be in four-inch pots and in bloom at the time of planting, but they can be grown to that size for about \$1.00 per hundred.

The labor in growing tomatoes is likely more than in most crops, but I think the revenue will be larger in proportion. Of course it will not pay to grow them unless you go about it in the right way. The plants must be kept tied up and trimmed and as they make a very rapid growth you must be right after them, otherwise your past labors may amount to very little. They are gross feeders and from the time the fruit starts swelling they must be fed and fed high. My past experience has shown that they do not care for clear water at any time after the fruit is the size of plums. They, however, should not be fed on anything that is green. I have found that liquid made from well rotted horse and cow manure is the best thing to feed with. The second week of August the crop will be through and the house may be put to any purpose desired. A treatise on growing may be given later if desired.

William Lin

Plant! Plant!

A mighty timber famine is at our very doors. Plant quick-growing trees which will soon bring results. The cotton-wood, Carolina and Norway poplars bring in speedy results. There are low, wet places which for twenty-five years have done nothing but raise weeds; set them to raising houses and barns for yourself and children. The soil from your hillsides is going down to the gulf; lariat it, make it stay at home. Fasten it with evergreens. The cream of your land is being wasted; it is a crime to allow this. The bleak fields need protection in winter. The crops need defense from the sweeping hot winds—so plant wind-breaks.

You are king by divine right. Your domain reaches from the center of the earth up to the stars. For you the forces of Nature are at work. Out on the oceans, Nature sets numberless pumps to work to load those squadrons of the air which pour abundance on your fields. For you there is power in those lances of light which come from the sun. All the air is filled with viewless armies, working for you. For you that orchard toils, and for you those young forests would labor as faithful serfs. Plant flowers and they will spring up and give you worshipful reverence. As supreme in your kingdom, you should make the very best of it, and have your place match the beauty of the surroundings, the glory of the skies, the attraction of the fields, the splendors of the morning and the evening. Too often the home is like a plague spot—a carbuncle on the fair face of Nature.

THE HOME

is not a sty, a kennel, a barn, or a workshop. It is a place where immortals live to fit themselves for eternal beauty which is their heritage. Don't be content with raising pork, grains, and fruits and vegetables for the body; raise something to feed the soul. Remember, beauty is wealth, and you can raise it as easily as you can corn and potatoes. The pioneer stage, with its hard struggle is past. We are in a new era, now, where we can afford the home beautiful. It should be the most attractive place on earth—a precious memory for children in all the after years. I recall two homes—one is surrounded with flowers. It was beautifully transformed by the owner. In the rear, was a grove of spruce which he planted, himself. The rows were like aisles in grand temples. The trees were like columns, supporting that arch of green. That grove was full of play-houses and play-things. All the influences were purifying and inspiring. How the children loved that home, and when they went away, how eager they were to get back again, and when they grew up, they wanted to settle near it.

The other, is a bleak house, out on a great prairie. There is the eternal grind. In the yard, not a bush or tree or flower. In the house not a carpet or rocking-chair, no pictures nor magazines. It is work, work. The father is like one of the old slave drivers; the children, slaves. Result: Three beautiful girls who might have made noble wives and mothers, were easily lured to the bad. You could write ruin on their blighted lives.

Anything was better, they thought, than such dreadful, dreary drudgery. The five boys left as soon as they could get away—only one amounted to anything. The rest were hoboes. These might have been noble men, leaders in society, enterprising citizens. Father and mother are left all alone in their desolation. Every child was as eager to get away as a convict to escape prison. Nothing could call them back. The man has his money, \$75,000, but the children are gone—sold! sold! by their own father. Does this pay?

A father once said to me, "I am having trouble with my boys. I have lost control of them, and sometimes they steal my money. I am afraid they are going to the bad." He wanted me to visit him. The man had built a fine store in a near by town, he had a half section of land, but was living in a miserable house, and his boys had to go to bed in a stuffy garret so low they had to crawl into bed on all fours. He never encouraged them or paid them anything. They worked hard and thought they should have some remuneration if they had to steal it.

Right here, let me say, the boy is a good deal as his father moulds him. A man should keep his promise to his son as most sacred, and on no account violate it. He should see that the son keeps his promise to him to the letter. Some fathers have written contracts with their boys, so that everything will be in black and white, so that either can point out any lack on the other side. In contrast with the den above described, I visited a father who built a new house and saw that his boys had one of the finest rooms. I was visiting him and noticed that the two sons, sixteen and eighteen, were taking hold of the work as though they owned the place. They seemed to show good judgment, and acted as if the whole responsibility was on their shoulders. I congratulated the father. He said, "I pay that oldest boy eighteen dollars a month and the other twelve dollars. I want them to have some self respect, and feel that they are earning something and it teaches them how to take care of their money and then we live for our children, anyway. What incentive would we have without them?"

Too often, children have less attention than the cattle and the horses. Oh! the shame of it, when they should be trained as kings and queens for a royal heritage. Strange, the parent can not look over into the future and see an ideal for that little toddler—a leader among men, crowned with riches and honor, his own prolonged life on a grander scale. Let the children associate with the pure and the beautiful. Have that front yard an Elysium. Have every attractive thing in it which can be made to grow—a charming array of trees, shrubs, and flowers. Have the girls associate with the best dressed and best behaved company on earth. Children are influenced by their surroundings. Interest the boy in the finest flowers that bloom and he will be a gentleman and not a boor.

A man who saw that he was going to lose three calves, said to his three sons, "You may have, each of you, one of these calves, if you will save them." They did. How much they found out of the best way to raise stock. Two years passed and he said at the table, "I think I shall sell my three steers, tomorrow; they will bring fifty dollars apiece." The boys noticed it. He had to go away that afternoon; when he came back, there were not any steers. The boys said, "We will teach Dad to be honest." Children will get tremendously in earnest if you will let them study all out doors. The structure of the plant, the unfolding of

the flower, grafting, budding, planting, all are so much more interesting than poring over dull books.

Interest the boy in the choicest trees, shrubs, and flowers. Let him write their names on labels and tie them on till he knows them by heart. Let him study their history, interest him in the creation of new varieties, teach him the principles of hybridizing, call out the Divinity within him. Let him understand that he, too, can be a creator, that he can call out of the unknown, things rare and beautiful which no other eyes have yet seen, and you have lifted him to a higher plane and given him a start worthy of his parentage, so plant and raise refinement and beauty.

"Oh bosh on your beauty!" did you say? "There is no money in it." Yes, but back in your soul, there is a lurking love for it after all. You married the most beautiful girl you could find; you drive a fine team—I notice you did not buy a dilapidated buggy at an auction but got a new carriage. Your colts and calves are beautiful and you keep them so. Those round and plump pigs with those fashionable kinks in their tails just please you. Sneer as you will, you love the beautiful; now go and raise a lot of it in that front yard.

C. S. Hammon

York, Neb.

Euonymus alatus, Maxim

The autumnal coloring of our trees and shrubs contributes in no small degree to their value for ornamental planting, and, fortunately, the appreciation of this truth is constantly growing. Unique in respect to its autumnal beauty is this Asiatic congener of our own Burning Bush. Although native to China and Japan, *Euonymus alatus* is quite at home in our gardens and grounds where it becomes a compact, spreading, symmetrical shrub and attains a height of five to eight feet, and a spread of equal proportions. It is distinguished from the other members of its group by the pronounced corky wings or plates on its branches, which give them the appearance of being four-angled. The flowers appear in early June. They are small, yellowish and, like those of many of this same group, unimportant. The fruit which follows is small, borne on short stalks singly or in groups of two or three, and opens its capsule from the middle to the last of September. The pod is purplish and the aril of the seed is scarlet. However, the fruit does not render the plant showy for not only is it scattered but, before the leaves fall, it is partially concealed. The foliage is neat, of good color and in the autumn turns to a cheerful rose-pink which is most delightful. In fact as regards beauty of autumnal splendor it ranks very high among ornamental shrubs. As to requirements, it does not appear to be fastidious though of course it needs good treatment for the best results. The neatness of its habit and the goodness of its foliage make it desirable when a specimen shrub is sought, and render it indispensable to the shrubbery.

According to custom **HORTICULTURE** for the fourth time takes up its annual prerogative and extends cordial greetings to the carnation industries of our country and the Society which so ably represents them. In preceding issues we have urged the value of the meetings and exhibition which are about to open in Washington and the importance of attendance and participation by every grower of the divine flower who has any aspiration for excellence or prosperity. We hope to see the largest gathering in the Society's history and that the proceedings may widen the sphere, elevate the standard and fire the ardor of those whose lives are dedicated to the interests of this flower of the people.

Just how far the winning of high honors under the exacting rules of the exhibition table as to form, size, etc., will go as an endorsement of a variety for every day florists' needs is no new question with the carnation society or, indeed, any society similarly devoted to the improvement on precise lines of any special flower. Some of the qualities that make for utility and serviceable availability for the florist whose primary demand upon a carnation must be that it "brings grist to his mill" as a cut flower, are not easily made apparent on the exhibition table and as advancement towards the ideal goes on from year to year the problem may be expected to grow in importance. For the dealer enjoying the support of critical buyers willing to pay for fine finish nothing can be too good. He should encourage with the utmost liberality the striving for high grade material which is the keynote of successful competitive exhibiting. But the lack of superiority in these points is not enough in itself to condemn a carnation for every day market uses.

Catalogues, catalogues, by every mail, from all points, domestic and foreign. What an enormous expenditure, or investment rather, they represent in the aggregate! To any one who has had occasion to follow up the catalogue industry the remarkable advancement in quality, within a decade even, is conspicuously apparent. Half-tone illustrations of high artistic excellence have replaced the crude productions of a few years ago and the cheap wood cut has practically disappeared. In cover adornment, quality of paper and beauty of typographical work no expense has been spared, apparently, and after the book is completed then comes the outlay for mailing—an amount little realized by most of us. And yet, while prices of everything which appertains to catalogue making have vastly increased, the prices on seeds, plants, and sundries as quoted are no higher but in many instances lower than they were in years gone by. The seed and nursery catalogue makers have contributed much to the general store of popular horticultural knowledge; in intelligence, liberality and enterprise they stand in the front rank of the profession and are entitled to the respect and gratitude of every one who likes to see horticulture flourish.

Two standards of value

The catalogue season

About Fertilizers and their Use

SOLUBILITY

To dispose of this term solubility when used in its broad sense would be to go to the roots of all science, while to attempt to do so within the compass of a few words would be chemical sacrilege. Chemical conceptions of any sort, especially concerning solids, are always complicated with questions of solubility. The alkali of the Western plains makes vast areas inhospitable to plant life and troublesome to eradicate because of its everlasting solubility. The slow but certain action of the elements making our granite rocks yield up their stores of potash for vegetable growth is largely a question of solubility. The only "Open Sesame" at the plant root is solubility. Animal and vegetable life both are dependent upon solubility.

Every day conditions upon this planet are such that we immediately associate solubility with that combination of elements called water. Water and solubility.

The illimitable solvent action of water needs no proof or elucidation here. Even our late friend Jernegen of Gold-Sea-Water fame was right, for sea water does have gold—some—and likewise many other minerals which dissolve by the conditions in Nature, although gold is one of the most obdurate metals, being dissolved by only the strongest acids. Yet gold is not soluble in water in the common acceptance of the word for it does not dissolve easily and entirely in a moderate amount of water. Such substances as sugar, nitrate of soda or sulphate of potash do, although not to the same degree because sugar will dissolve in twice its weight of water, pure nitrate in nearly its own weight while the sulphate takes ten times to become dissolved.

The simple solvent action of water, while remarkable, should not become confused with that obtained when combined with agents as air or the juices from bacteria. Many "mixed fertilizers," blood or bone, are insoluble and require something besides water to dissolve them.

In this connection the great influence of the fineness of fertilizing materials should be noted for its great practical importance. The ease or otherwise with which it yields up its value depends largely upon the amount of surface exposed or in other words upon the working surface. Fine grinding makes surface grow in astounding fashion and therefore even if the solubility is slight the work done in a given time is vastly increased and the maximum effect is reached with the finest powder.

Everybody is cognizant of this truth and note its application to bone. Being of slight solubility in water its immediate value depends to a great extent upon its fineness. Almost any action upon it from any agent will be aided by large surface. To have bone last a long time we use "inch" bone. To have it last years we use "meal." To get its value as near to "now" as possible, use very fine. But no grinding mill ever made by man can begin to equal the smallness of the particle of a fertilizer already dissolved in water yet fine grinding does advance a little along the road of solubility.

The great importance to the plant of this question of solubility lies in the accepted fact that no solid can be taken in by the root. Whatever necessary mineral is wanted by the plant must first be dissolved; to be admitted to the internal works it must be as a liquid.

Rudley M. Pray

The Hydrangea Controversy

Editor of HORTICULTURE:

The criticisms on the name bestowed by our firm upon the Hydrangea known as *arborescens alba grandiflora* have been duly noted. If Professor Bailey, in using the name *H. arb. var. sterilis*, copied same from Asa Gray's works this would not prove the one described by Gray and the variety named by ourselves to be identical, by any means. We cannot conceive that so valuable a shrub as the variety named by us could possibly have escaped for so many years the attention of those interested in hardy shrubs.

The dissemination of *H. arb. alba grandiflora* was brought about through agencies quite unusual. It was not disseminated by any nurseryman or plantsman, but was widely scattered by private individuals through a stretch of country embracing Dayton, Piqua, Springfield and Yellow Springs, Ohio. In this particular one of our critics makes us say that we knew it was held and grown by a large number of plantsmen. If the word plantsman as used means those in the trade then such reference is incorrect and untrue.

I cannot see that either the secretary of the S. A. F. or ourselves are to blame for the part taken in naming and registering the variety *H. arbor. alba grandiflora*. It is conceded that we were the first to describe and offer the variety in a commercial way. Mr. E. Y. Teas, who has furnished a number of notes on the variety under the name *arb. sterilis*, saw the plant blooming for the first time on our place and we had the privilege of calling his attention to it.

The fact that one or two foreign horticultural journals call this hydrangea by the old botanical name should not outweigh the fact that nearly all the catalogue men in this country use the name given by our firm. With all due respect to the critics it does seem as if a mountain had been made out of a small affair. We have not believed the variety named by us to be identical with the variety described by Gray and Torrey and until proof is forthcoming that such is the case we shall decline to drop the name given by us. Let those who are contending so strenuously bring the proof that such is the case and then we will cheerfully surrender the name given by us.

Hind-sight criticism is not always on the line of a square deal. If the writers who have had so much to say in the way of criticizing both the name and the registration had given their (supposed) information earlier it would have looked more like a desire to ascertain the truth rather than to reflect on the alleged shortcomings of the registrar.

We have this solution to offer. We suggest that Professor Charles S. Sargent be made the referee in the matter of determining the name. When the hydrangea in question comes into bloom at the Arboretum the Professor could then compare it with the dried specimens in the herbaria and whatever decision Professor Sargent shall render will be eminently satisfactory to us and should be to all concerned.

E. G. Hill

AFTER ADJOURNMENT.

Keep your eye on the Chas. Lamer dahlia. It is "head and shoulders" above anything in its class. As a commercial cut flower subject it will fill a large place.

Let every member of the Carnation Society visiting Washington next week take a look in at the Botanic Garden and doff his hat to the Crittendon Oak and its indomitable defender, Wm. R. Smith.

Don't look for a clean sweep of a houseful of stock as a result of a couple of dollars timidly invested in advertising. Just keep hammering away and be reasonable. It's bound to win.

Hear that heavy rumbling in the distance? That must be old Jupiter and his friend the weather clerk fixing up a howler for Burns' birthday anniversary and the Carnation Society's pilgrimage. Watch out!

That hydrangea problem now takes on new magnitude. Our friend the National Nurseryman opens its columns to it as "the new 'Everblooming!'"

"The worst is not
So long as we can say, 'This is the worst.'"

The warm weather of the past month has been very lenient on the coal pile, and the man with the Electric Circulator on his heating system is to be envied. For warm weather or coldest weather what a comfort that Circulator is to the grower!

We are glad to see the double-flowering lobelia coming into this market at last. It is one of the grandest pot plant and bedding plant novelties sent out in recent years. It produces no seed but may be propagated easily. The color is a most beautiful blue and it is "bound to take."

At the Chicago meeting of the American Carnation Society, ten years ago preliminary certificates were won by the following varieties: Mrs. Thos. W. Lawson, America, Arbutus, Scarlet Queen; three-year certificates by Empress, Evelina, Argyle, G. H. Crane. How fleeting is fame! Wonder where our present day beauties will be ten years hence.

On McKinley Day, January 29, it is proposed to give away a lot of carnations at the exhibition in Washington, and request is made for donations for this purpose from growers. Carnations are plentiful and we hope the growers will do the generous thing. The McKinley sentiment has been worth a good deal to the carnation in its haste for popularity.

I think HORTICULTURE should be complimented on several points but especially on the fact that its columns are not occupied by the effusions of personal spite and spleen, under the imaginary disguise of "wit" such as can be found in some other trade papers. Respectfully yours,

PATRICK FLANAGAN.

New Rochelle, N. Y., Jan. 6, 1908.

PERSONAL.

Detroit visitor: Mr. J. E. Roiser, of New York.

F. E. Palmer, florist, of Brookline, Mass., has been elected president of the Brookline Business Men's Association.

Parker Thayer Barnes, formerly connected with the Garden Magazine, has taken a position with Suburban Life.

Charles A. Davis, of Dover, N. H., who has been ill for three weeks with grippe and pneumonia, is now reported as improving.

Edwin Lonsdale is in attendance upon the meeting of the State Board of Agriculture, of which he is a member, at Harrisburg, Pa.

Visitors in Boston: A. N. Pierson, Cromwell, Conn.; S. S. Skidelsky, Philadelphia; Winfried Rolker, New York; H. R. Mitchell, Waterville, Me.; E. J. Harmon, Portland, Me.

DAVID F. ROY

Richard Engelman, florist, of Pittsfield, Mass., was married to Miss Margaret Wallner, of New York, on January 5, in the German Lutheran Church, New York.

Miss Amy K. Luffman, daughter of George E. Luffman, landscape gardener of Birmingham, Ala., and Mr. Jas. R. Lambly were married at Spokane, Washington, on January 18, 1908.

H. J. Corfield, who for the past three years has been designing and constructing a large estate nearly three hundred acres in extent, near Detroit, has resigned and will return east.

Carl E. Kern, formerly with J. H. Troy of The Rosary Flower Company, New York, has been appointed head of the landscape department of the National Cash Register Company at Dayton, O.

David F. Roy, for many years head gardener at the Converse Estate and superintendent of Pine Banks Park, Malden, Mass., has resigned those posi-

tions and will take charge of "The Moorings." Col. H. E. Converse's estate at Marion, Mass. Mr. Roy's removal from the Boston district will be a decided loss to the gardening fraternity of the New England metropolis who have recognized in him one of the most skilful of the growers and exhibitors at the Massachusetts Horticultural Society's shows. The place he is about to take charge of is practically new and offers abundant scope for constructive ability. A range of greenhouses will eventually be erected. The best wishes of a host of friends will accompany Mr. Roy and his family to their new home.

LADIES' SOCIETY OF AMERICAN FLORISTS.

All members of the Ladies' Society of American Florists attending the carnation meeting at Washington, please wear your Badge Pin.

MRS. W. J. VESEY, Pres.

MRS. CHAS. H. MAYNARD, Sec'y.

OBITUARY.

William Adams, a highly esteemed florist of Great Neck, N. Y., died on January 2.

Frances E., wife of J. E. Linfoot, florist of Cincinnati, passed away on January 11.

Wm. Cunningham, florist, of Cincinnati, O., who has occupied a stand in the flower market since it was started, died on January 12.

Robert Mann, one of the pioneer florists of Lansing, Mich., died on January 6, aged 77. A wife, two daughters and two sons survive him.

Jacob Katz, a retired landscape gardener and florist of Mt. Airy, Pa., died on January 11. He was born in Philadelphia 75 years ago. Two sons survive.

James W. Davis, born in Godfrey township, Ill., where he has spent his entire life, passed away on January 13, aged 67. He has been very successful in raising and propagating small fruits.

Patrick McDonough, who has carried on a florist business in Kearny and Arlington, N. J., for many years, died at his home in East Newark on January 12. A widow, two sons and a daughter survive him.

Mayor Hibbard has put his official ban upon the use of the potted plants and floral decorations from the municipal conservatories for private social affairs throughout the city of Boston.

The mayor was called upon by a committee of young people who wanted to borrow potted plants from the city's conservatories, and he was amazed at such a request. When informed that it was customary for years to secure such displays for the asking, he immediately notified those in charge of the municipal conservatories not to loan any more flowers or potted plants for private use.

In years gone by and until the present administration it was a very common occurrence for the city to distribute plants at halls where social affairs were being held, and the city paid for all the carting. Reform is surely under way.

AMERICAN CARNATION SOCIETY.

The Sixteenth Annual Meeting and Exhibition of this Society will be held in the National Rifles' Hall, 918 G street, N. W., Washington, D. C., January 28, 29 and 30, 1908. Exhibition on the first floor, sessions on the second floor. Address all exhibits to Chas. McCauley, Washington, D. C. Express charges on all exhibits must be prepaid.

Papers will be read as follows: "Experiments in Carnation Growing by the Department of Agriculture," by Dr. B. T. Galloway, Washington, D. C.; "Carnation Breeding," by Prof. J. B. Norton, Washington, D. C.; "What the buyer of a New Carnation should expect from The Originator," by S. S. Skidelsky, Philadelphia, Pa.; "What The Originator of a New Carnation should expect of the buyer" by W. N. Rudd, Mt. Greenwood, Ill.; "Special Points on Carnation Hybridizing," by Peter Fisher, Ems, Mass.; C. W. Ward, Queens, N. Y.; Fred Dornier, LaFayette, Ind., and Richard Witterstaetter, Cincinnati, O.; "Cultural Methods for Carnations," by Irving Gingrich, South Bend, Ind.

Exhibition Schedule.

Class A.—Open to all varieties, Seedlings or Standard Sorts:—

No.	100 Blooms	First Prize.	Second Prize.
1.	White	\$10.00	\$6.00
2.	Enchantress shade of Pink	10.00	6.00
3.	Lawson shade of Pink	10.00	6.00

FRED H. LEMON
President American Carnation Society

4.	Winsor shade of Pink	10.00	6.00
5.	Scarlet	10.00	6.00
6.	Crimson	10.00	6.00
7.	Yellow Variegated	10.00	6.00
8.	White Variegated	10.00	6.00
9.	Any other color	10.00	6.00

Class B.—Open to all varieties disseminated prior to July 1st, 1907:—

Classes No. 10 to No. 36, each for a first prize of \$5.00, and second prize of \$3.00 for fifty blooms of the following varieties respectively: Lady Bountiful, White Perfection, Any other White, Enchantress, Any other Enchantress shade of Pink, Winsor, Pink Enchantress, Any other Pink (this shade), Lawson, Aristocrat, Pink Imperial, Any other Dark Pink, Robert Craig, Red Chief, Victory, Beacon, Any other Scarlet, M. A. Patten, Imperial, Any other White Variegated, Harry Fenn, Harlowarden, Any other Crimson, Eldorado, Any other Yellow Variegated, Prosperity, Any other color. Three prizes may be awarded under No. 36.

Class C.—A gold medal will be given for the best vase of 100 blooms, any variety, any color.

A silver medal will be given for the second best vase of 100 blooms, any variety, any color.

A bronze medal will be given for the third best vase of 100 blooms, any variety, any color.

S. A. F. Medals.

Class D.—A silver medal will be awarded for the best vase of 50 blooms of carnations not yet disseminated.

A bronze medal will be given for the second best vase of 50 blooms of carnations not yet disseminated.

The variety to be in all cases of American origin.

Judges are to reserve awards in this class if in their opinion the exhibits are not worthy of the medals.

The Henry F. Michell Co., Philadelphia, Pa., offer a silver vase valued at \$40.00 for the best 100 blooms of carnation in four varieties, twenty-five blooms to a variety. Open to private gardeners only.

Peter Bisset, Washington, D. C., offers \$10.00 in gold for the best display of carnations grown by a private gardener, distinct from Michell's prize.

Peter Fisher, E111's, Mass., offers prizes for the best 50 blooms of Beacon: 1st, \$12.00; 2nd, \$8.00; 3rd, \$5.00.

Geo. H. Cooke, Washington, D. C., offers \$10.00 in gold for the best 25 blooms pink seedlings or sport darker than Enchantress and lighter than Lawson, never before winning a prize or medal. Those having a preliminary certificate eligible.

Entries for this prize will not be eligible to compete for any other prize.

Geo. C. Shafter, Washington, D. C., offers \$10.00 in gold for the best vase

A. M. HILL
Secretary

PETER BISSET
Vice-President

of 50 blooms, not more than three varieties, open only to growers having less than 20,000 feet of glass.

S. C. Briggs, Washington, D. C., offers \$10.00 in gold for best vase of white carnations, 50 blooms, distinct from other entries.

J. J. Harty, Washington, D. C., offers a silver cup to the exhibitor making the largest display—all vases in all classes being counted as part of this display.

Z. D. Blackistone, Washington, D. C., offers \$10.00 in gold for the best 50 blooms of white carnations, distinct from other entries.

C. A. Goldsmith, jeweler, Washington, D. C., offers a cup or stein for the best 50 blooms of red—new or standard variety. Vases for this prize not to be entered in any other class. Red meaning Beacon, Victory or Craig shade of red.

In addition to the premiums offered in the Premium List the Berry & Whitmore Co. offer a silver cup for the best vase fifty blooms of light pink (Enchantress shade), either novelty or standard sort, but separate from other exhibits.

W. J. Vonderheide offers a very fine silver cup for a vase of 100 blooms of the best carnation to be disseminated for 1908. This exhibit must also be separate from all others excepting that it can enter for Certificate of Merit with the same vase.

In consideration of the lateness in offering these prizes they can be entered for at the meeting in Washington without extra charge. Any one not a member of the society and not acquainted with the rules and regulations can by joining at the meeting, make entries for the show free of charge. Members who have neglected to send in their entries or have additions to make can make them at the meeting by paying \$1.00 for each entry made. Everything possible will be done to make the work of exhibitors easy and expeditious. We have a fine lot of entries now and want more for the above prizes and any other of the

HOUSE OF CARNATION AFTERGLOW.

The illustration shows a house of carnation Afterglow that was planted on August 8th and photographed seven weeks later. These plants were propagated the first week in April, potted

in 2-1/4-inch pots on May 10th and planted in the field on June 2d. The blooms could be cut with stems ten to fourteen inches long at the time the photograph was taken.

numerous ones offered in the Premium List.

Any mail sent the secretary after this issue of the paper to be sure of reaching him should be sent to the Raleigh, Washington, D. C.

Transportation.

Concerning reduced rates to Washington, the Central Passenger Association, having refused the special rate, thus cutting out the States of Ohio, Indiana, Michigan and Illinois, members from these states will do well to buy to Pittsburgh and from there buy

to Washington on the Certificate plan, or get special rates for parties of ten to Washington.

Mississippi, Alabama, Georgia, Florida, South and North Carolina, Tennessee, Kentucky, Virginia, West Virginia, Maryland, Delaware, New Jersey, Pennsylvania, except the northwest corner north and west of Pittsburgh and west of Franklin, Oil City and Warren, New York excepting the territory west of Salamanca and Buffalo, Connecticut, Rhode Island, Massachusetts, Vermont, New Hampshire and Maine, will issue certificates if asked for, making the rate one and one-third.

Through some misunderstanding the New England Passenger Association instructed their agents to issue certificates for the Breeders' Association to be held in Washington, D. C., Jan. 28th to 30th, in conjunction with this society, but failed to add that certificates should be issued to either the Breeders' or the Carnation Society as both are to be counted as one meeting. This has been changed and covers the whole of the New England Association except that the Eastern Steamship Co. certificates will be issued for the Carnation Society in this territory the same as in previous years.

If you cannot get a certificate for the Carnation Society and the agent has instructions to issue for the Breeders' meeting buy your ticket for that meeting; it will be honored in Washington and you can get the reduced fare to return home.

We want everybody interested in carnations to come to this meeting and if possible bring along an exhibit. You will be getting into good company both in the exhibition hall and the meeting room.

THREE PROMISING CARNATIONS.

Growers of carnations would find much to interest them at the establishment of James D. Cockcroft, Northport, L. I., one of the largest plants devoted exclusively to the cultivation of carnations east of New York. Besides the best of the standard varieties the principal attractions are the three new varieties, Harvard (crimson), Faust (scarlet) and Georgia (fringed white), originated by Mr. Cockcroft.

The following extract from a letter from one of the leading wholesale florists of New York shows the popularity and ready sale of these novelties:

"Georgia we consider to be the best white carnation coming to New York and can easily sell from 50 to 100 per cent more than regular white.

"Harvard we think to be the best dark red coming here; easier to sell at double the price of any other dark red.

"Yours truly,

(Signed) "TRAENDLY & SCHENCK."

Harvard.

This new crimson carnation originated four years ago. The raisers inform us that it is the result of a cross between Prosperity and Gen. Macco, combining the magnificent size and stem of the former with the freedom and rapid growth of the latter, the flowers measuring from 3 1/2 to 4 inches in diameter, being symmetrical and well built and splendid keepers and shippers. A critical examination by a disinterested party just before Christmas of the 5000 plants now being grown disclosed not a single case of split calyx. The stems are stiff and wiry at all seasons, averaging about 24

inches in length. The plant comes into bloom early and, continuing throughout the season, every shoot produces a well-formed flower.

Faust.

This scarlet variety is a shade brighter than Victory with wiry stems averaging 20 to 24 inches. The flowers are of medium size, well built up, with a perfect calyx. It is a strong grower, coming into bloom very early and its extreme productiveness recommends it

for commercial use, especially as at Christmas it is in full crop.

Georgia.

Among the whites on the market Georgia stands in a class by itself as a commercial variety in productiveness, and a fancy in size, fragrance and form. This variety James D. Cockcroft intends to introduce next year.

CARNATIONS IN NEW BEDFORD.

A. B. Hathaway writes us that carnation crops have been very fine about New Bedford, Mass., this season. Winsor, grown by its originator, Peter Murray, has made a new record. The Lloyd, H. A. Jahn's new white, has created a sensation, the cut from 10,000 plants just before Christmas being very heavy and the flowers averaging over three inches in diameter. S. S. Peckham, who has now given up the retail trade, E. Y. Pierce and R. U. Woodhouse, are all large growers of carnations in this neighborhood, the Queen and Fair Maid being the varieties most extensively grown but it is in the air that the Lloyd bids fair to distance all other whites in their future plantings.

WHITE FAIR MAID.

This pure white sport of the useful and universally popular pink Fair Maid, which forms the subject of our frontispiece, originated with R. E. Moir, and is being disseminated by Welch Bros., Boston. It needs no introduction; the picture shows what it is and the experienced commercial grower will have no trouble in recognizing the brand.

HARVARD

A VASE OF GEORGIA

HOME PRODUCTION OF LILY BULBS.

Bulletin No. 120 of the Bureau of Plant Industry, written by Geo. W. Oliver, treats on the Production of "Easter" Lily Bulbs in the United States. Disease in bulbs imported from Bermuda is given as the reason for the trials which have been under way in the Department of Agriculture to find favorable locations and climatic conditions for the domestic production of these bulbs for commercial purposes. After many unsatisfactory attempts in the Carolinas, on the Pacific coast and elsewhere, it is stated that the experimenters became convinced that the progeny of crossed varieties were more vigorous than either parent, and the work is now being prosecuted in California with results so encouraging that several practical men are engaged in getting up a stock of seedlings upon a large scale. The report now issued tells of the advantages or drawbacks of many localities, the difficulties encountered in the various stages of production, etc. It is stated that the best success thus far has been with seedlings obtained by crossing the red-stemmed "giganteum" with the Harrisii. Full details of culture, selection of seed bearers, preparation of soil, sowing seed, temperatures and their effects, etc., and an interesting group of plates is appended.

APPRAISERS' DECISIONS.

No. 17885.—Iris Bulbs.—Protest 255-184 of F. B. Vandegrift & Co. (New York).

Dried iris bulbs which were classified under the provision in paragraph 251, tariff act of 1897, for "bulbs * * * which are cultivated for their flowers," are claimed to be free of duty under paragraph 548 as "drugs," or under other provisions of the free list. Assessment affirmed.

Waite, General Appraiser: * * * The iris is a well-known flowering plant. See "Iris," International Encyclopedia. From some varieties of this plant is produced the orris root, known to the drug trade. We think, however, that the orris root of commerce is the root of the iris plant after being scraped and prepared for the trade, which destroys the germinating principle. We are unable to learn that the root in such form as imported in this case is known or dealt in by the drug trade. There is some evidence in the case which tends to show that this particular importation was brought in for the purpose of planting and raising the orris root for medicinal or drug purposes of planting and raising the orris root for medicinal or drug purposes. We do not think, however, that the use of the merchandise after importation should govern. It will be noted that the language of paragraph 251 is, "which are cultivated for their flowers." We think the iris roots are cultivated for their flowers, and the fact that they may be diverted to another use cannot vary the assessment upon importation, the commodity not being in shape or condition to be used as a drug or by those dealing in druggists' materials. It appears from the evidence that these plants at the time of importation were in a condition to germinate and grow. If the bulb may be used either to plant for flowering

CARNATION ANDREW CARNEGIE.

The Chicago Carnation Company has 10,000 plants of this new variety growing. It is even more vigorous than its parent, with a somewhat heavier stem and a shorter growth than Harlowarden. As Harlowarden is so well known universally and has so many good points, there is little left to be said in regard to the merits of this sport. The disseminators are booked up on orders for about all they can deliver this month, and anticipate quite a demand for it later in the season, which they hope to be

able to supply, as the variety makes so many cuttings.

purposes or to raise a product intended for ultimate conversion into a drug, it cannot be said, therefore, to be dutiable under paragraph 548.

A NEW NURSERY.

Messrs. A. Van Leeuwen and H. H. deWildt, formerly of Worcester, Mass., under the firm name of the Horticultural Company, have put in operation a nursery of 50 acres on the tract which the Carolina Trucking Development Company is developing at Castle, N. C.

The Horticultural Company is at present erecting a large stable and bulb house, 40x100 feet, on their place at Castle Haynes. Both gentlemen are well qualified by long experience in nursery work and landscape planting,

AN INTERESTING SEEDLING.

Edwin Lonsdale of Girard College, Philadelphia, has a number of seedling carnations one of which, a cross between Enchantress and Crane, he has great hopes of. It has the characteristic stem of the seed parent and gives promise of being a more profuse bloomer. The shape of the flower is also an improvement. It is essentially a white variety but has the faintest pink edge on each petal which, however, fades away before the flower is in condition for cutting. Mr. Lonsdale has hopes that this pink edge is the beginning of the picotee marking which, in his opinion, is preferable to the striped or bizarre stripe of variegation which, thus far, prevails in the American carnation type.

NEWS OF THE CLUBS AND SOCIETIES.

NEWPORT HORTICULTURAL SOCIETY.

A largely attended meeting of the Newport Horticultural Society was held in Mercury Hall, Tuesday evening, Jan. 14. D. J. Coughlin for the ball committee reported everything very satisfactory and promising for a large surplus of cash when all bills are paid. The committee were awarded a vote of thanks. Quite an interesting discussion was started by Mr. MacLellan on the subject of plant registration by the S. A. F. In the course of Mr. MacLellan's remarks he said that while he did not agree that the Secretary of the S. A. F. should be blamed for any mistakes occurring which he could not have prevented, (if such were the case that mistakes were made,) still he was strongly of the opinion that the S. A. F. should place more safeguards around the registry in order that only names of new varieties which, after investigation by persons of qualifications for the work, could be guaranteed as such, would be registered. It was generally conceded that the proper registry of new varieties of plants is a necessity. A case in point was mentioned where an amaryllis long known to gardeners and grown by them under a certain name is now advertised as something new, though not under the name it was known by. By such methods persons are liable to be disappointed in what they buy. Mr. MacLellan will read a paper at the next meeting of the society.

AMERICAN BREEDERS' ASSOCIATION.

The fourth annual meeting of this association will be held on January 28-30 at National Rifles Hall, Washington, D. C. On Wednesday and Thursday from 2 to 5 P. M. the meetings will be held conjointly with the American Carnation Society, and papers will be presented as follows:

Wednesday, Original Work among Native Roses, by W. Van Fleet, Little Silver, N. J.; Some Observations in Plant Improvement, by A. M. Soule, Athens, Ga.; Report of Committee on Breeding Roses, Peter Bisset, Washington; Development of the Immune or Resistant Character in Plants, by H. L. Bolley, Fargo, N. D.; Report of Committee on Breeding Carnations, C. W. Ward, Queens, N. Y. On Thursday afternoon papers on Carnation Breeding will be read and discussed.

ENGELMAN BOTANICAL CLUB.

The Engelman Botanical Club, St. Louis, Mo., held its meeting on January 13, and officers for 1908 were elected as follows: C. H. Thompson, president; Drs. Green and Gladfelter, vice-presidents; H. S. Barber, secretary; John Kellog, treasurer. The meeting was well attended and there were some very entertaining features during the evening, one of the best being a lecture by Prof. M. Craig, who has charge of the herbarium at the Missouri Botanical Garden. The next meeting will take place February 10th. Anyone interested is welcome.

NEW HAVEN COUNTY (CONN.) HORTICULTURAL SOCIETY.

The regular meeting of the above society was held on Tuesday, the 7th inst. Officers for the ensuing year were elected as follows: John H. Murray, president; Frank Duffy, vice-president; David Kydd, treasurer; Walter Koella, secretary; board of managers, James Moore, Robert Paton, Thos. Pettit, James Bruce, Ernest Carroi. The new president gave a short address outlining the work for the following year. A syllabus of speakers on various subjects to be presented at different meetings is being prepared. It was voted to have the annual chrysanthemum show again next November.

LEONARD KILL

The New President of the Chicago Florists' Club.

Our congratulations to the Chicago Florists' Club on its good selection of a president for this all important year in its history. Leonard Kill is young, wide-awake and popular. He will "make good."

DETROIT FLORISTS' CLUB.

The many members of the club who assembled at the last regular meeting were doomed to disappointment. The special committee to decide whether there should be a spring or fall show recommended a fall show, but after a lengthy discussion the matter was referred back to the committee for further consideration.

MINNESOTA CROP BREEDERS.

The afternoon session of the State Agricultural Society Jan. 15 was given over to the Crop Breeders' Association. Among other interesting papers on field crop breeding was one on potatoes by F. M. Libby and one on growing onions by F. H. Gibbs, both well-qualified, up-to-date growers of vegetables.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The meeting of the Gardeners' and Florists' Club at Horticultural Hall, Boston, on the evening of January 21, was a record breaker. It was ladies' night and there must have been close to four hundred members with their ladies in attendance. More or less routine work was transacted briefly before the entertainment began. The secretary made the interesting statement that the largest attendance during the year 1907 was 316 and the smallest 110, the average being 153. Sixty-three new members had been added. The next meeting, in February, will be carnation night and the March meeting will be rose night. The report of the treasurer showed a gain of \$200 in the treasury for the year. Resolutions on the deaths of W. W. Edgar and John Clark were adopted and placed on record. An appreciative letter was received from John Cook concerning the award given at the last meeting to his rose My Maryland. A letter of gratitude came from John Clark and Wm. S. Clark of Washington. On the exhibition table were some superb trusses of geranium from W. N. Craig, eucharis flowers from F. W. Fletcher and Moschosma riparium from David Weir.

Among the speakers during the evening were S. S. Skidelsky of Philadelphia, J. K. M. L. Farquhar and Thos. J. Grey, all of whom struck an optimistic note and gave much pleasure with their remarks. The musical program rendered by kind friends of the members gave unalloyed pleasure and the refreshments so lavishly handed around by volunteer young ladies and gentlemen appropriately closed an evening which will be long remembered as one of the most enjoyable occasions in the history of this popular organization. Among the performers were Frank Cannell, Mrs. Whittet, Miss Hanigan, Mrs. and Mr. Brough.

With Boston's big department store show windows all aglow with tartans and Black Watch kilts in honor of the 149th birthday of Scotland's beloved poet, it seemed perfectly natural and fitting that a goodly proportion of the music should find its best expression through the exultant strains of "Bonnie Dundee," "The March of the Cameron Men," and the love cadences of the land of heather and bonnie lasses. But "Killarney" and "Barney O'Hay" also had a hearing, and so for everybody.

"The golden hours on angel wings flew—"

GREENWICH GARDENERS' SOCIETY.

The Greenwich Gardeners' Society held a meeting at Florist McMellen's store, 67 Arch street, Greenwich, Conn., to elect officers for the ensuing year. All the old officers were re-elected. President, Silas Frost; vice-president, P. Flaherty; financial secretary, P. Crighton; treasurer, A. Mead; recording secretary, T. Young. After the routine business had been discussed the meeting adjourned till Feb. 5.

THOMAS YOUNG, Secretary.

New Rose-MRS. JARDINE

Has all the good qualities and is a money maker.

Easy to Grow. Large Flower. Free Bloomer. Fragrant.

It has stood every test and already has been awarded many honors.

A Silver Medal from Massachusetts Horticultural Society. A Silver Medal from the Pennsylvania Horticultural Society. And Numerous Certificates.

It has also stood the best test that any novelty could possibly have in receiving the highest honors of the award committee of the New York Florist Club after their exhaustive examination of the growing plants in December, they having unanimously awarded Mrs. Jardine the club certificate with a score of ninety-two points.

Our young stock is in superb condition and all orders will be filled in strict rotation on and after March 15th.

From two and one half inch pots, \$6.00 per dozen; \$30.00 per hundred; \$250 per thousand, \$1125 five thousand.

Grafted plants on DICKSON'S MANETTI STOCKS, \$5.00 per 100 additional.

Send orders to

ROBERT SCOTT & SON

Sharon Hill, Pa.

OR

WILLIAM P. CRAIG

1305 Filbert St., Philadelphia, Pa.

Sole Selling Agent in United States and Canada

SOUTHAMPTON HORTICULTURAL SOCIETY.

At the second bi-monthly meeting of this society held January 16, C. Gollioz read a very interesting paper on Mushroom Culture which brought out a good discussion. The subject of mulching newly planted trees was taken up and discussed at some length after which Pres. Clark appointed a show committee as follows: U. G. Ager, J. Guilfoyle, M. McLaughlin, Wm. Fitzpatrick, B. C. Palmer and Wm. Griffin. U. G. AGER.

GINSENG GROWERS.

The following officers were elected January 15 by the Minnesota State Ginseng Growers' Association: President, J. S. Reese, Hutchinson; 1st vice-president, H. D. Lots, St. Paul; 2nd vice-president, E. H. Peterson, Garden City; secretary, Mrs. D. D. Chapin, Hutchinson; treasurer, C. R. Klinkenberg, Lester Prairie.

Only seventeen growers of the State belong to the association, but they are determined to better the condition and to stop the growing of Japanese Ginseng which they claim is inferior to American. This organization is only a year old, but is thriving.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

President Traendly has appointed as State vice-presidents for Michigan: Messrs. A. Pochelon, Detroit, and Henry Smith, Grand Rapids, for 1908.

FLORISTS' CLUB OF WASHINGTON.

A special meeting was held at Gude's Hall, Jan. 21st, for the purpose of settling all final matters pertaining to the approaching carnation show. There is every reason to believe that the exhibition will outdistance all other shows of this city. On the evening of Jan. 29th, which is "McKinley Day," all the carnations will be given away, and growers are earnestly requested to donate what carnations they can to help make the undertaking a thorough success in every way.

The reception to be held on the evening of the 30th will be at Rauscher's. F. H. Kramer was appointed chairman of committee with the power of appointing six colleagues of his own selection. The committee on banquet hall decoration is headed by Wm. F. Gude, who will also select his own committee. Chas. McCauley was appointed superintendent of exhibition. All exhibition tables must be below the usual average in order that the exhibits may be better seen and be more effective. Letters were read from both Commissioner McFarland and Secretary Wilson declining with regret their invitations to be present at the banquet, pleading previous engagements.

The next regular meeting of the club will be held Feb. 4th and will be especially important, as it is the meeting for the election of officers for the coming year.

AMERICAN ROSE SOCIETY.

F. R. Pierson Co., Tarrytown, New York, offer a silver cup for a vase of twelve blooms (or not to exceed twenty-five) for the best new rose not in commerce and never before exhibited before the American Rose Society.

BENJ. HAMMOND, Secretary.

CLUB AND SOCIETY NOTES.

On Thursday, January 30, C. A. Morton of Marlboro will speak on Children's Home Gardens before the Worcester County Horticultural Society, Worcester, Mass.

The lecture before the Massachusetts Horticultural Society, Boston, on January 25, will be delivered by Robert Cameron of Cambridge; subject, Annuals and Biennials.

At the annual election of officers on January 15th at Providence the Rhode Island Horticultural Society elected E. H. Burlingame, president, and Chas. W. Smith secretary and treasurer.

The State Horticultural Association held its annual meeting at Lancaster, Pa., January 13-14. Among the interesting features was an illustrated lecture depicting insect warfare by Prof. Surface of Harrisburg.

The St. Louis Horticultural Society at its last meeting decided to again hold a Spring Flower Show, place and date not yet decided upon. The executive committee will meet again next month to make arrangements.

The Tennessee State Nurserymen's

Special Announcement

by the

S. S. PENNOCK-MEEHAN CO., of Philadelphia

The Sensational New Rose, MRS. JARDINE

If anyone is in a position to know and judge of the merits of a new rose from a commercial point of view, it is the wholesaler. He stands midway between the grower and retailer, and knows thoroughly how difficult it is to get a rose to suit both. Therefore, when a firm of the standing of the S. S. Pennock-Meehan Co. comes out boldly and says that Mrs. Jardine is a winner in every way, after they have watched her behavior long and carefully, every grower may confidently bank on their assurance. The important place long held by Bride-maid and now occupied for a short time by Killarney is the destined pedestal of Mrs. Jardine in the rose world. Nothing less. Orders booked now with the S. S. Pennock-Meehan Co. will be filled direct from their growers, delivery commencing March 15, strong plants on their own roots, 2½ inch pots, as follows:— **\$30.00 per 100, \$250.00 per 1000.**

In view of the enormous demand already in evidence from all parts of the country, orders should be placed without delay. If grafted plants are preferred, these can be furnished at fifty dollars per thousand additional—grown on the genuine Dickson Manetti Stocks.

Association will meet on January 31, at the Tulane Hotel, Nashville. An interesting program has been arranged. Exhibits of spraying machinery, insecticides, nursery stock, etc., will be made.

The fifth annual meeting of the Alabama State Horticultural Society will be held at Birmingham on February 13-14. Prof. S. B. Green, of Minnesota, is expected to be present. W. F. Heikes is president and R. S. Mackintosh, secretary.

The Horticultural Society of Chicago at its meeting on January 14 elected officers as follows: President, W. E. Kelley; vice-presidents, W. N. Rudd, Ernest Wienhoeber, N. H. Carpenter; secretary, E. A. Kanst; treasurer, E. Wienhoeber. One thousand dollars was pledged to the guarantee fund for the National Flower Show and prizes and medals to the value of \$500.

At the meeting of the Illinois Florists' Association which meets at Springfield, Ill., Feb. 18 and 19, quite a delegation of members of the St. Louis Florists' Club are expected to attend. Ex-President H. C. Irish of the St. Louis Florists' Club has accepted the invitation to read a paper. The request came from President Hey of the Springfield Florists' Club. Mr. Irish has not as yet selected his subject, but it is sure to be interesting to all.

The prize list of the Victoria Horticultural Society, Victoria, B. C., for their show on August 12-13, is now ready and includes some one hundred and seventy prizes. In the sweet pea class are offered a vase valued at \$20 and the silver medal of the National Sweet Pea Society; Robert Sydenham, of England, offers three prizes of a guinea, 15s., and 10s. 6d., respectively, for sweet peas grown from seed furnished by him. In the decorated dinner table class the prizes are \$25, \$12 and \$6, respectively.

The annual meeting, banquet and exhibition of the State Florists' Association of Indiana was held January 15 at Indianapolis. It was decided to extend an invitation to the American Carnation Society to hold its annual convention and exhibition at Indianapolis in 1909. Officers for the ensuing year were elected as follows: President, A. S. Stewart, Anderson; vice-presidents, Herman Young, Indian-

NEW FORESTER AT IOWA STATE COLLEGE.

At a recent meeting of the Board of Trustees of the Iowa State College, Mr. C. A. Scott, of the United States Forest Service, was elected to the Chair of Forestry to fill the vacancy caused by the resignation of Professor H. P. Baker who accepted a more lucrative position at the Pennsylvania State College. Mr. Scott is a graduate of the Kansas State Agricultural College and a student of the Yale College of Forestry. Mr. Scott has been continuously in the employment of the Forest Service since graduation, and during this period of seven years has gradually advanced through all stages of the work from that of Student Assistant to Forest Supervisor, which position he resigned to accept the Chair of Forestry at the Iowa State College.

His work has been largely confined to the Middle West and the Rocky Mountain states; hence he has the advantage of being familiar with the forestry conditions of the Upper Mississippi Valley. Since its origin he has had charge of the extensive forest nurseries and plantings of the Dismal River National Forest. During the past three years he has given a special course of lectures before the Nebraska University forestry students and during the winters has also rendered assistance as a lecturer at the Farmers' Institutes of Nebraska. In 1906 he was elected to membership in the Society of American Foresters, a professional organization which is limited in its membership. His training, experience, strength of character and personality make him one of the best men available for the position to which he has been elected at the Iowa State College.

BOTANIC GARDENS AND THEIR USE.

At a meeting of the horticultural seminar at Massachusetts Agricultural College, January 17, A. S. Kinney of Mount Holyoke College gave a valuable paper on Botanic Gardens and Their Uses in Teaching Horticulture. He pointed out the difference between a flower garden and a botanic garden saying that it was just the difference between a novel and a spelling book. The same words may be in each book but in one they are arranged for beauty of effect while in the other they are arranged systematically for study. In growing plants in a botanic garden it is important that each species be allowed an opportunity for perfectly normal development. No group of plants should be especially favored and none should be placed at a special disadvantage. Labels should be of two kinds, large genus labels and smaller species labels. It is often advisable to take in all of the labels during the winter and it is nearly always best to take in the smaller ones. A record of plants in the gardens should be kept either in a record book or better still in a card catalog. As fast as plants disappear in the collection the cards representing them should be placed in a separate file thus maintaining a dead list. When a species disappears in this manner a careful entry should be made on the card showing how and why it was lost. It is desirable in a botanic garden to have representations of all families and as far as possible of all important genera. It requires considerable study and enterprise to secure a complete representation. Herbaceous perennials are especially valuable because they are easily maintained and they add greatly to any botanic collection. Valuable additions to a botanic garden are to be secured most easily with exchanges with other botanic gardens. Nearly every garden maintains an exchange list of seeds and it is easy in this way to secure new plants from all parts of the world. The uses of the botanic garden are various. The opportunity offered for the study of plants in their natural condition is greater than in a flower garden or other ornamental collection.

During Recess

TARRYTOWN HORTICULTURAL SOCIETY.

The ninth annual dinner of this society was held at the Florence Hotel on January 15, 1908. The hall and tables were artistically decorated with carnations from F. R. Pierson Co. and flowering plants from several private gardeners. About sixty-five members and guests were present and after a short address of welcome by newly-elected President Angus, we sat down to the most elaborate dinner given by the caterers, Mr. and Mrs. John Hennessey, and, as far as the writer could see, every one did honor to the repast. Mr. and Mrs. Hennessey are retiring from business this spring, and as it was their last dinner put up for this society they surpassed their record, and as a token of friendship to the members they donated a beautiful gold mounted ivory gavel, which was presented by Hon. Frank V. Millard. Mr. F. R. Pierson responded to the donation in a few well chosen words, and accepted the gift in the name of the society. The jovial Dr. F. E. Russell was toastmaster for the evening, and he certainly filled the position with tact and plenty of good humor. A few representatives of kindred societies were with us, but an early start for home made them miss the best part of the evening. The poetic J. Austin Shaw was present as usual, and we had to listen to some very fine poetry about Tarrytown. S. S. Butterfield made only a flying visit and had to return home early.

Speakers on different subjects as called by the toastmaster were Farmer Millard on "Back Yard Gardens;" Farmer Tibbits on "Aquatic Gardens;" Farmer Ely on "Harrowing Experiences with Automobiles;" Farmer Brown with "Graft and Grafting," all were listened to with pleasure.

It was pronounced the most enjoyable dinner we ever had; and the only regrettable incident of the evening was that one prominent member had the misfortune to have his hat exchanged for a pretty well damaged one; but it seemed to fit his head.

LOUIS A. MARTIN, Cor. Sec.

SPORTY NEW HAVEN.

The bowling team of the New Haven County Horticultural Society held its banquet at the Aschenbroedel on the 15th inst. and presentation of prizes won during the last series of games was part of the program. The following is a list of prize winners and their averages:

	Ave.	High Single.
Ferguson	165	215
Dickie	159	194
Nye (Captain)	152	205
Bell	139	186
Pettit	139	177
Symons	135	172
Wirtz	130	173
W. J. Bayliss	124	189
A. Bayliss	124	176
Kydd	116	159
Bruce	116	157
Webster	108	176
Moore	106	159

Ferguson won silver cup for three high singles; W. J. Bayliss ditto for high average. At the meeting on the 18th, Thos. Nye was re-elected captain.

A committee was appointed to make

DAGATA

In **DAGATA** we have what is conceded, and that without successful contradiction, to be the highest development of the Geranium at the present time, the premier of M. Bruant's many magnificent introductions, which are recognized as the Standard in their different classes the world over. The color is a beautiful shade of mauve rose, with large white blotches at the base of each upper petal, flowers are freely produced in enormous trusses, the habit is perfect. dwarf, robust and branching. **25c each; \$2.00 per dozen; \$15.00 per 100.**

CYCLOPS. This new race of Geraniums is remarkable for their distinct white center, making them strikingly attractive as a pot plant. The following varieties are all of splendid habit of growth, free blooming, etc., and we are confident they will give satisfaction in every way.

MISTRAL. (Lemoine, 1905), the brightest soft crimson shading through tender rose to distinct white center. **\$1.00 per dozen, \$6.00 per 100.**

MAURICE POTTE-HER. (Lemoine, 1905), bright scarlet, shading through tender violet to white center. **\$1.00 per dozen, \$6.00 per 100.**

JULES VASSEUR. (Bruant, 1906), vermillion scarlet, distinct white center, slight violet shading on upper petals. **25c each, \$2.00 per dozen.**

LEON BAUDRIER. (Bruant, 1906), beautiful soft cerise, shading to white center. **25c each, \$2.00 per dozen.**

LEOPOLD BOUILLE. (Bruant, 1906), bright crimson magenta, shading through violet to white center. **25c each, \$2.00 per dozen.**

DR. PHILIPPE TISSOT. (Bruant, 1906), light crimson, shading through magenta to white center. **25c each, \$2.00 per dozen.**

GERANIUMS, New Varieties, 100, all different, 1905 and 1906 introduction, a splendid collection for \$10.00.

GERANIUMS, Standard Varieties, \$2.00 per 100 up. 2-in pots, 1000, our selection in 20 varieties for **\$18.50.**

GERANIUMS, Ivy-leaved, good assortment, \$3.00 per 100.

PELARGONIUMS, 6 good varieties, \$1.50 per dozen, \$6.00 per 100.

up a schedule, as there are about twenty members more in the club and match games will be played every Monday and Saturday night. The Aschenbroedel alleys have been secured for those nights and some fine prizes will be put up.

FUN AT MADISON.

The second annual smoker of the Morris County Gardeners' and Florists' Society, at Madison, N. J., was a gala affair. Over one hundred and fifty members and their friends were on the job.

Great credit is due the entertainment committee for the high class talent they secured. Service of coffee, sandwiches, punch "a la Totty" and cigars was abundant and timely. There was a short business meeting, at which letters of regret were read from the

Monmouth County Horticultural Society, Tarrytown Horticultural Society and Wm. J. Stewart of HORTICULTURE. Among the visitors were Harry Turner of Castle Gould, the Rickards Bros., Wm. Sperling of Stump & Walter, W. E. Marshall, who represented the New York Florists' Club, making an address and singing a couple of songs. J. Austin Shaw, who left his poetry on the train but had a couple of yarns that were worth anyone's while to hear. The indispensable Al. and Billy Rickards helped with their songs and playing. O. A. Miller of the N. J. Floricultural Society extended an invitation to attend their smoker on Feb. 7th, in a body. The invitation was accepted and Orange will hum that evening. "Auld Lang Syne" was sung at 1 A. M.

E. R.

New Rose—MY MARYLAND

Rose Growers in attendance upon the Carnation Show at Washington are invited to stop over at Baltimore and see this rose growing.

I am booking orders now. It is a beautiful salmon pink with long buds. Easy and strong grower. Makes no blind wood, has averaged 22 flowers to a plant since the first of October, has long, stiff stems. Some of the largest growers who have seen it have bought from one to three thousand plants.

PRICE, 2 1-2 inch pots, \$5 per dozen, \$25 per 100, \$200 per 1000.

STOCK LIMITED

JOHN COOK, 318 N. Charles St., Baltimore, Md.

CATALOGUES RECEIVED.

American.

American Horticultural Distributing Co., Martinsburg, W. Va.—Pamphlet of Target Brand Scale Destroyer.

W. W. Barnard Company, Chicago.—Market Gardeners' Price List of high grade vegetable seeds and gardening tools.

Henry Saxton Adams, Wellesley, Mass.—Adams' Little Green Book of Choice Seeds and Bulbs, 1908. Sweet peas for cover subject.

D. McNallie Plant and Fruit Co., Sarexie, Mo.—1908 Catalogue and Price List of Strawberry Plants. 10,000,000 in 75 varieties.

R. Vincent, Jr., & Sons Co., White Marsh, Md.—Wholesale Trade List of Vegetable, Greenhouse and Bedding Plants for Florists and Dealers Only.

California Rose Company, Pomona, Cal.—Illustrated and Descriptive Book of Field Grown Roses. Issued for Fall of 1907 and Spring of 1908. Finely illustrated.

Chicago Carnation Company, Joliet, Ill.—Price List of Carnations and Chrysanthemums for 1908. Portraits of Manager A. T. Pyfer and Supt. Peter Oisem adorn the title page.

W. W. Wilmore, Denver, Colo.—Catalogue of Dahlias, Hardy Herbaceous Plants, etc., for Spring, 1908. Illustrated with excellent portraits of the various types of dahlias, which are Mr. Wilmore's leading specialties. Also Dahlia Trade List.

Bridgeman's Seed Warehouse, Rickards Bros., proprietors, New York City

—Flower and Vegetable Seed Catalogue for 1908. Pretty cover design in gold and drab on brown background. A good sensible publication and very creditable to "the boys."

Joseph Breck & Sons, Boston, Mass.—1908 Catalogue of High Grade Seeds. As usual a comprehensive list, with fine descriptive text and dignified make-up. The cover is white with inscription in soft green tints with delicate scroll work in red.

R. Vincent, Jr., & Sons Co., White Marsh, Md.—Geraniums. A very attractive catalogue, a collection of handsome geranium novelty portraits bound together, all of the highest artistic excellence and well calculated to bring business to the house.

James Smalley & Co., McPherson, Kansas.—Garden and Field Seed Annual, 1908. Golden chrysanthemums and golden corn, with background of brown oak leaves, form a somewhat unusual but effective cover. Kansas' seed interests seem to be well taken care of.

Johnson Seed Company, Philadelphia, Pa.—Garden and Farm Annual, 1908. A robust old gentleman gazing in admiration on a mammoth onion duly larded, calls attention on the cover page to the good things enumerated within. Profusely illustrated with convincing half-tones.

Elmer D. Smith & Co., Adrian, Mich. Wholesale Catalogue for 1908 of Chrysanthemums, New and Standard Varieties. The reader doesn't need to go beyond this catalogue to get in touch with the top crust of the chrysanthe-

num interest in America. Send for it and take your inspiration from it. It fills the bill.

Henry F. Michell Co., Philadelphia, Pa.—Michell's 1908 Book of Seeds. This astute seed merchant has chosen for his front cover illustration a group of hardy chrysanthemums in colors and for the back cover some exquisite dahlias. The novelty list is a good one and the catalogue is altogether up-to-date.

Wm. Elliott & Sons, New York City.—Seeds, 1908. This volume is quite unusual in size and form. The front cover presents a charming garden scene in dainty colors, of trees and shrubs and blooming rhododendrons. Nasturtium Pink Beauty adorns the back cover. One of the handsomest of the season.

Storrs & Harrison Co., Painesville, O.—Spring Catalogue, No. 2, 1908.—Cover subjects are Digitalis and Royal Striped Comet Asters effectively portrayed in colors. This is a book of over 100 pages devoted to greenhouse and hardy plants, seeds, trees and shrubs, and profusely illustrated with half tones and wood cuts.

Fancher Creek Nurseries, Fresno, Cal.—New Products of the Trees; Luther Burbank's Late Introduction. Contains a number of beautifully colored plates of the Vesuvius, Formosa, Gaviota and Santa Rosa plums, Rutland plumeot and finished lumber of the Paradox and Royal Black walnut, the latter a cross between Juglans nigra and J. Californica. The volume contains also portraits of Luther Burbank and Geo. C. Roeding.

ADIANTUM FARLEYENSE

DREER'S MIXED FERNS FOR DISHES

Roustan, Servan & Cie, St. Remy de Provence, France.—Wholesale Catalogue and Price List of flower and vegetable seeds.

Wilhelm Pfitzer, Stuttgart, Germany.—General catalogue of seeds, plants, bulbs, roses, etc., including many choice novelties; also special rose list.

J. Heiß's' Sahne, Halstenbek, Germany.—A little book of views in this busy nursery establishment showing fields of seedling conifers, etc., packing sheds and facilities.

Uberto Hillebrand, Pallanza, Italy.—Wholesale List of Flower, Vegetable and Tree Seeds. Aster alpinus longipetiolata Goliath is a promising novelty from Central Asia.

Frederick Roemer, Quedlinburg, Germany.—Wholesale catalogue of Choice German Flower Seeds. Strong on pansies, stocks, asters and other specialties of this well-known house.

Arpad Muhle, Temesvar, Germany. Rose Catalogue for 1908. A remarkable list of about 1000 varieties of roses in all classes with name of introducer and date of introduction. Many line rose portraits.

K. Velthuys, Hillegom, Holland.—Wholesale Trade List of Holland Bulbs and Flower Roots. A colored view of one of the firm's tulip fields in bloom makes an attractive frontispiece. Importers of French and Dutch bulbs would do well to consult this list.

M. Herb, Naples, Italy.—General Catalogue of Seeds for 1907-1908. The text of this catalogue is given in three languages, English, German and French. Some interesting novelties in myosotis, helianthus, ipomea, stocks, zinnias, etc., are offered.

Henry Mette, Quedlinburg, Germany.—1907-1908 Trade Catalogue of Flower, Vegetable and Farm Seeds. A very full list of the offers of this old-established firm. The cover illustrations in color comprise novelties in petunias, verbenas, tuberous begonias and violas.

F. C. Heinemann, Erfurt, Germany.—Special Trade Offer of Novelties, 1908, and of previous years. Among the interesting things described and figured are pansy 'Eros,' Emperor salpiglossis, Gloxinia Meteor and Dark-shaded Princess pinks, all of which are beautifully shown in a colored plate.

Papet Bergmann, Quedlinburg, Germany.—General seed, bulb and plant catalogue for 1908. The cover is decidedly original, being of terra cotta ground work, with a charming young miss watering a plantation of four-leaved clover with a watering pot of enormous capacity.

Wilhelm Muhle, Temesvar, Germany.—General Catalogue of Seeds, Plants and Shrubs, hardy and tender. An immense book with gorgeous covers, the front showing new rose-flowered canna Mad. Marguerite Muhle, with portrait of the lady in whose honor it was named, and the back page adorned with three strikingly handsome chrysanthemums.

PUBLICATIONS RECEIVED.

The Mulberry and Other Silk Worm Food Plants, by George W. Oliver, is the title of Bulletin No. 119 of the Bureau of Plant Industry, issued Dec. 31, 1907. This is to take the place of Bulletin No. 34, published in 1903, on the same topic, which has long been out of print.

Seed Trade

The very mild open weather is regarded by many as an ill omen for next season's crops. Of course there is yet plenty of time for snow and cold weather. Snow is needed to protect the roots of plants and winter grain as the freezing and thawing is most harmful, but the absence of cold weather is allowing great swarms of insects to become active, and numerous reports of the green bug and Hessian fly in the winter wheat are floating in from Kansas, Missouri and the southwest generally. This is one of the first results of such a winter, and should conditions continue as up to January 20th, plant life will have many more insects to contend with next summer than if we had seasonably cold weather and a liberal quantity of snow. However, there is no use worrying, as there is yet time enough for all the cold weather we may want to kill off all the insects we want killed, and some things we do not.

It really begins to look as if we were slated for Government supervision of the seed business. Already the grass seed dealers have been brought under control to a considerable extent, and the coils are tightening all the time. If the control were just and intelligent it might be endurable, but without prejudice it can very truthfully be described as neither. To illustrate this, a prominent grass seed jobber submitted to the Department of Agriculture half of a sample of fancy red top, the other half going to his state experiment station. The two samples were identical, the lot having been placed on a paper and divided, yet the reports were radically at variance. The Washington Department found 134-100 of 1 per cent. of foreign seed and 6 per cent. of inert matter. The report then proceeds to show the number of foreign seeds to the pound on the basis of 134-100 as something over 100,000, but the number of true seeds is not given. Would it not have been fair to have done so? It would be interesting to know by what process of computation they arrived at the number of foreign seeds to the pound, or if the number given is even approximately correct. It would seem to be about up to the seedsmen, and particularly the grass seed dealer, to have a central laboratory in charge of a trained and fully equipped seed expert of such standing that his findings would be authoritative and beyond question; then when the Washington Department sends out a report like that above referred to, they can either verify or disprove it. As matters now stand, if the Department had said 1,000,000 foreign seeds, there would have been no way of disproving it excepting its inherent improbability.

Referring again to Government supervision of the seed industry, it would seem to be a perfectly logical step in view of the present trend of Government policy, and the fact that the grass seed end of it is now under such supervision; and could the right man be found for this work it might not prove an unmixed evil. Among ourselves we may as well admit that there is a great deal of faking and

humbugging of the public by seedsmen—not all by any means—but a sufficient number to discredit the entire trade. The remaining of varieties is one of the chief evils and has resulted in multiplying names to such an extent as to be a well nigh unbearable nuisance. Most seedsmen have been somewhat at fault, but the chief glory belongs to a few retailers whose names will readily occur to the reader.

The American Seed Trade Association has wrestled with this problem of multiplying names by appointing committees on nomenclature, but they have been mainly ornamental, as no practical results have ever followed. In justice to them, however, it may be said that the problem was too difficult and complex, and having no authority to enforce any conclusions they might reach, however excellent, they could do nothing. More will be said along this line in the near future.

Alaska peas are being offered at a considerable reduction in price from that ruling about January first. These offers are coming from growers and dealers. Many of these persons are like the proverbial farmer, who never will sell so long as any one wants to buy, but when the buyer loses his interest and no longer follows the farmer, the latter will promptly turn and follow him. It is certainly wonderful where all of the peas have come from this year, though the wrinkled canning sorts are still difficult to obtain, and particularly Admirals, which are not procurable at any price. Still some of these may be dug up in the near future.

Mr. and Mrs. Francis Brill of Hempstead, Long Island, celebrated their golden wedding anniversary at their home on January 1st, 1908. Owing to the failing health of Mrs. Brill the celebration was quiet and a formal reception was dispensed with. Mr. Brill's father, John Brill, was a leading horticulturist, conducting a market garden and florist business in Jersey City, and later at Newark, N. J., until the time of his death in 1870. With the advantage of these surroundings and training, Francis Brill in 1870 established a seed farm at Mattituck, L. I., where he soon made fame in cauliflower seed growing. Later the business was transferred to Hempstead. Five children are living, one of whom is the wife of Walter Bodger of John Bodger & Sons, seed growers, of Gardena, Cal. HORTICULTURE joins in the congratulations which are being extended to Mr. and Mrs. Brill from far and near, and wishes them many years yet of happiness and prosperity.

The Executive Committee of the American Seed Trade Association met at Chicago on Tuesday, January 21 and voted for Detroit, Mich., as the location for the next convention.

William Seabald will put up a \$25,000 warehouse at Curtis and Cuits avenues, Signal, Ohio, where he will deal in seeds, grain, etc.

You have a good and coming paper. It proves to me that you are hustlers.

The Largest Seed Growers in the United States

PHILADELPHIA NOTES.

Begonia Duke of Marlboro is considered by Charles H. Campbell to be a grand Christmas plant. Its grey-white trusses are massive, freely produced and borne well above the foliage. He has found it a good seller the past three seasons.

George Anderson thinks that the ruling averages on cut roses this season will have some effect on the automobile industry, and that there will be a few good second-hand machines for sale among the flower growers next June. At this writing we have been unable to get a price on Mr. Anderson's own "devil-wagon."

Christian Eisele has purchased the dwelling and large rear lot on the north of his present property at 11th and Roy Sts. The Westmoreland St. extension is expected to go through this season and will take away his old dwelling and part of his greenhouses, for which he has been awarded \$7,000 by the city. Hitchings & Co. have the contract to rebuild three houses 60 x 15 feet. Mrs. Claus, a neighboring florist, has been awarded \$5,300 for the damages to her greenhouses, etc., for the same street extension, but we understand she does not intend to rebuild.

Godfrey Aschman believes the great secret of his success in Easter lily culture lies in having the bulbs well ripened before potting them, and then keeping them growing slowly at first, but without the slightest check. If careful attention be given to these two points, little will be heard in the land as to bad bulbs.

Edward Reid left on the 20th inst. on a brief gunning trip to North Carolina. A trip like this is a good antidote for the rather backward trade conditions this year. It is also fine when the season happens to be unusually prosperous. In fact, it resembles the Duke of York's special brew—"warm in winter, cool in summer, good all the year."

A large audience assembled in Horticultural Hall on the 21st inst. to listen to J. Otto Thilow's lecture on the Yellowstone Park. The lecture was splendidly illustrated with stereopticon views.

W. K. Harris, while able to be around after his severe illness of last fall, is still far from his normal self. He and Commodore Westcott are contemplating a trip to the Bermudas for a few weeks' rest, recuperation and change of air.

Spring show of Pennsylvania Horticultural Society will open March 31.

DAYTON NEWS.

In a very cordial letter, Mr. H. H. Ritter writes us that business in Dayton has been generally satisfactory this season, the flower trade being fairly busy. The plant trade is not as good as it might be, as elsewhere the weather has been unseasonably spring like. Mr. Ritter says: "One day last week I picked about a dozen dandelion blooms in my yard; but now we are having cold weather with the sun nice and bright, which brings us good stock." Among recent visitors were Fred Beerhorst, Holland, and W. C. Johnson, Cambridge, Ohio.

You will find something worth reading on every page of HORTICULTURE.

NEWS NOTES.

A. E. Jennings, florist, of Toronto, Can., has made an assignment.

W. C. Hawkins has started in the florist business in Palestine, Texas.

A dividend of 20 per cent. has been declared to the creditors of A. J. Feltonris, New York.

W. J. Kingsbury, of West Derry, N. H., has purchased the Smith greenhouses and will continue the business.

E. F. Hauser has purchased the Prospect avenue greenhouses at Rutledge, Pa., and will make changes and improvements.

The Meuret greenhouses at Park Ridge, Chicago, have been leased by L. C. Schelt. Mr. Meuret will locate near by and put up new houses.

Charles De Clerc will open an office in the Hoffman Building, Green Bay, Wis., about February 1, where orders may be taken for the stock to be grown in his new houses near the Fort Howard cemetery.

Leonard Barron, managing editor of the Garden Magazine, gave a lecture in the Free Lecture Course of the American Institute at the Berkeley Lyceum, New York City, on Wednesday, January 22, on "Everybody's Flower Garden," with suggestions on plans of arrangement for harmonious color effect. The lecture was illustrated with stereopticon slides of great interest and was enjoyed by a large and appreciative audience.

FIRE RECORD.

A fire that started in the boiler room injured the greenhouses of W. L. Porter, of Ogden, Utah, to the amount of \$3000. No insurance.

A greenhouse belonging to Dr. D. J. Nagel, of New York, at his summer residence on Game Cock Island, was destroyed on January 8. Loss about \$800.

FLOWER MARKET REPORTS

BOSTON Business in general has flattened out a little this week. On the whole it may be called dull. Roses are not suffering to any extent. Hitherto they have been rather on the short side. The present weakness in demand only makes them a little easier to obtain and has not affected market prices. With carnations the situation is different. There is a decided slump and the market is badly overstocked. Dark pink of the Lawson type is the most affected. Whites and Enchantress have held their own nicely. All stock is much more plentiful than at a corresponding date last year.

BUFFALO The first part of last week was rather dull but toward the end business brightened up considerable. Stock on all lines has been in fairly good supply, violets, peas, carnations, and bulbous stock. Yellow flowers were in demand, and tulips and daffodils filled the bill. Roses were a trifle scarce, especially select Bridesmaid, Killarney and Richmond. Beauties were in good supply and at fine quality; demand a little weak but many were used to good advantage at a hotel opening on Saturday, which helped to clean up. All other flowers were had in quantity.

DETROIT Business is moving along slowly with good healthy prices, wholesale and retail. Every now and then we experience a little rush, but we could all stand more. Collections are reported satisfactory.

INDIANAPOLIS Quiet conditions prevail at the present time with the majority of florists. While in certain stock scarcities exist, the market is in exceptional condition for this time of year, due to the phenomenal weather conditions. Good roses of all kinds and carnations are plentiful, with a marked decrease in prices. Violets, lily of the valley, orchids and lilacs are coming in regularly, but are not realizing nearly what they did in former years. Bulbous stock is plentiful but moves slowly. Paper Whites and Roman hyacinths being a drug on the market. Quite a variety of good flowering plants are seen but move slowly. The market is well stocked on green goods, with a moderate sale. Growers of palms and ferns are complaining at dull trade.

NEW YORK The rose market shows some improvement. Conditions generally are fully as good as last week and in some respects better. The receipts of carnations in the wholesale markets are on the increase. Violets are also in heavy supply and demand is light. Daffodils and tulips are coming in very freely. Lily of the valley is doing somewhat better. Sweet peas of fine grade are in evidence and sell satisfactorily. While values are lower generally than one year ago it is pleasant to know that the cost of production is also lower and that the coal bins are holding out unusually well.

Many things are **PHILADELPHIA** off crop and shipments are perceptibly less than last week. While there is a little more life to the market, and things clean up better, there is no increase in prices. Violets are more of a drug than anything else, both single and double coming in far too freely. The good weather has given the street men a chance to move many of them but there are daily mountains of them still remaining. If the demand were better Beauty roses would be a very scarce article. The Richmond market is in good shape. Killarney is ahead of Bridesmaid as to quality and demand in the pink class. There are many who think that Bridesmaid has already taken second place as a pink rose, and there is no telling what Jardine will do by and by. She certainly looks formidable. Now for a good new white. Montgomery white sport from Killarney will be worth the watching.

The unseasonably **WASHINGTON** warm, bright weather has been a godsend to the coal piles, and has materially increased the bloom. Home grown flowers are much more plentiful, but the prices have not declined appreciably. There is an overabundance of violets, and they are not of a particularly good quality, but carnations are improving.

I HAVE THE LARGEST LINE OF CAST IRON AND STEEL GREENHOUSE BOILERS

A prominent florist says - "Far Ahead of Any steam boiler that I have ever seen or used in regard to heating, and is very economical in coal." This is the verdict of an old time florist. Do not decide until you have my estimate on boiler or heating material.

JOHN A. PAYNE, Horticultural Architect and Builder. Main Office and Factory: 260-274 Culver Ave., Jersey City, N.J. Sash opening apparatus and all kinds of greenhouse structural material.

The FLORISTS' HAIL ASSOCIATION OF AMERICA, insurer of 28,000,000 sq. ft. of glass. For particulars address John C. Esler, Sec'y, Saddle River, N.J.

SITUATIONS WANTED

GOOD MEN When you need good men, skilled or unskilled, Write: THOS. H. BAMBRICK 34 South 7th Street Philadelphia Help of all kinds, including that for Florists, Nurserymen, Seedsmen and the Horticultural trade generally.

WANTED-Position in general greenhouse work; single; age 35; lifelong experience; understand every detail of growing, etc. Address P. A., care HORTICULTURE.

WANTED-Position with reliable wholesale or retail seed house as seedsmen; six years' reference with trustworthy seed firms; nationality, Scotch. Address Seeds, care Horticulture.

SITUATION WANTED in general greenhouse work; single, age 35, five years' experience, commercial. Address W. W., care HORTICULTURE.

FOR SALE

FOR SALE-On account of the recent death of my husband, I desire to sell our green house property located at Farmington, Conn., consisting of seven greenhouses, covering 12,000 square feet of ground, planted principally to carnations and violets. Stock in excellent condition; free from disease and showing lots of bloom at present time. Business established twenty-eight years and a ready market for entire output. With two acres of land, and a six-roomed cottage, with all modern improvements; stable, sheds, implements, etc. A splendid opportunity to a quick buyer. Address for further information, terms, etc., to Mrs. Hugh Chesney, Farmington, Conn.

FOR SALE-A large consignment of 16x24 double thick American glass, A and B quality. For further information write Parschelsky Brothers, 59 Montrose Avenue, Brooklyn, N. Y.

Is Your Name In The Above List? If Not, Why Not?

"SCALECIDE"
HAS MADE SPRAYING EASY THEN WHY NEGLECT YOUR TREES?
 The N. Y. Herald, November 17, '07, says: "The chances are about a hundred to one that you have the San Jose Scale on your place and do not know it," and advises the use of "SCALECIDE." This is good advice. "SCALECIDE" has been tested and tried, and found thoroughly effective. The same yesterday, to-day, and all the time. One gallon makes 15 to 20, ready to use, by simply adding water.
 Prices: 1 gal., \$1.00; 5 gal., \$3.25; 10 gal., 6.00; 50 gal. bbl., \$25.00, F. O. B. our factory. Order to-day. Write for booklet Wand free sample.
B. G. PRATT CO., Mfg. Chemists,
 11 Broadway, New York City.

"HORICUM"

TRADE MARK

San Jose Scale on a Pear.

"HORICUM"
KILLS SAN JOSE SCALE

Directions for Use.

This preparation is Lime, Sulphur and Salt, making a concentrated Poly-sulphide of Calcium. The Salt adds to the adhesive properties, but the destructiveness to Scale Life lies in the Calcium Sulphide. Aside from its ability to destroy San Jose Scale, Horicum is a Fungicide, preventing the free development of fungoid troubles.

Shake package thoroughly or take the top off. The color in its concentrated form is a deep bronze green. Do not pour off the clear liquor only, stir the Horicum from the bottom of the package, add 20 parts of water (hot, if you can get it) for ordinary use. For a stronger dilution when the growth is all dormant, use 10 parts of water only (hot, if you have it) and spray thoroughly. By grading your dilution you make it any desired strength. Specific gravity, 1.50. Total Poly-sulphides, 30% by weight. Send for pamphlets to

WILLIAM H. LUTTON

HORTICULTURAL ARCHITECT AND BUILDER

WEST SIDE AVENUE STATION (C. R. R. OF N. J.)
JERSEY CITY, N. J.

Have not been established 50 years, but long enough to convince the wide-awake Florist and Gardener that it is to his interest to place his work in thoroughly practical hands.

(150,000 sq. ft. glass erected in 1907 will substantiate this claim)

And why not? My material is the best that can be secured. My iron frame construction has every modern feature that years of practical experience can embody.

AND THEN THERE IS THE COST TO BE CONSIDERED.

Why not let us take up this important question now?

In ordering goods please add, "I saw it in HORTICULTURE"

THE "BREAD AND BUTTER" CARNATION

is an absolute necessity to the florist. To be entitled to the name a variety must have all the good qualities

BUT

in addition it must also have been grown in

A BREAD AND BUTTER HOUSE

for imperfect circulation, irregular temperatures, wasteful coal consumption and other concomitants of a defective heating system will get away every time with all the butter and most of the bread.

Are You Satisfied to Put In Another Year Under Such Conditions?

WE can help you. There is no hot-water system so good that we cannot improve its effectiveness and lessen the cost by installing our

ELECTRIC CIRCULATOR

Some systems are so antiquated, unreliable and extravagant that it is cheaper to throw them out and put in a "Bread and Butter" heating outfit.

It costs you nothing to consult us. We are prepared to show you how to hitch up the Bread and Butter Carnation with the Electric Hot Water Circulator so that you can make money.

lay it out with sidewalks. It is a great advantage in reaching each plant on the side benches, without the danger of injuring any in working among them. But first, be sure of the right construction! For endurance and unquestionable practicalness of every construction point, our *Sectional Iron Frame Houses* fill every growing requirement.

We make every part of a greenhouse but the glass. We sell any part.

LORD & BURNHAM CO.

1133 BROADWAY, cor. 26th Street, N. Y.

BOSTON Branch: 819 Tremont Building

PHILADELPHIA Branch: 1215 Filbert St.

A very unusual proposition, this. We had two exacting things to overcome. The only available location at the time, was just across the drive from the residence, which is so situated that in the winter months, it would shade the greenhouses. Then the ground sloped off so rapidly that it necessitated high masonry to bring the houses to the grade level of the drive. You see how this was accomplished. The space below makes a good workroom and an ideal place for the storage of bulbs, etc. Now about the shade question. The gardener has been employed on several prominent places where there were houses of other constructions, and he flatly declares that the U-Bar houses, because they are so light, give him just as good results, *even with this handicap of shade*, as other houses under the very best of location advantages. So that is what the curved eave, light structural members and wide glass spacing means from the practical, productive side alone. It is certainly a tremendous advantage to have a house that gives to your plants such a large proportion of all the available light. But know every U-Bar strong point—send for the catalog. Pierson U-Bar Company, Designers and Builders *U-Bar Greenhouses*, Metropolitan Building, 4th Avenue and 23rd Street, New York.

NEW BEDFORD, - - MASS.

Winsor and White Enchantress

**Strong Rooted Cuttings
Now Ready for Delivery**

WINSOR has proved to be the finest carnation in the light pink class. We sold a large quantity of it last year, but there will be a much larger sale for it this year. At the English Carnation Show held in December, it was the winner in the light pink class. It is doing well everywhere and will supplant everything in that color.

WHITE ENCHANTRESS will occupy the same position among white carnations that Enchantress does among flesh pinks. It has all the good qualities of the common Enchantress,—long stem, earliness, large size, freedom, etc. In our opinion, it is by far the best white carnation ever introduced.

We have a splendid stock of both Winsor and White Enchantress ready for immediate delivery, and will guarantee perfect satisfaction with the cuttings supplied. Do not wait, because the demand for these varieties is bound to be enormous. **Order early, while we can promise immediate delivery**, and secure gilt-edged stock. We have a large stock of both of these varieties, and all our cuttings are heel cuttings, taken from flowering stems. On account of the quantity that we are growing, we are not obliged to over-propagate, and our stock is in the most perfect and healthy condition.

Strong rooted cuttings from sand, \$6 per 100, \$50 per 1000. Extra strong transplanted cuttings from soil, \$7.50 per 100, \$60 per 1000. Strong established pot-grown plants \$9 per 100, \$75 per 1000.

IMPERIAL and PINK IMPERIAL CARNATIONS

The **Color** of "Imperial" is a variegation of delicate Pink similar to the shade in "Enchantress," with darker shades of pink. The **Color** of "Pink Imperial" is a most pleasing shade of Pink, one that has long been wanted in the cut flower market. The **Stems** of both these varieties run from three to four feet in length, are extra strong and have no equal in the Carnation of to-day. The **Calyxes** are good and strong and are practically non-bursters. The **Flowers** are well formed, run from three to four inches in diameter and are very fragrant. They are early, free and continuous bloomers, from October until late in July. Strong growers, every shoot a flower. Have shown them both at the November Shows with thirty inches of stem. Vases of blooms, shown at this fall's Show at Philadelphia, were pronounced the finest ever shown there. Both **JOHN E. HAINES, the leading scarlet** has proved to be all that was claimed for it. **Color**, most brilliant scarlet. **Stem**, from two to three feet in length, strong. **Calyx**, good and strong, non-bursters. **Flower**, three to three and one-half inches in diameter. **Productiveness**, unsurpassed, blooms 12 months of the year. No extra grass. Every shoot a flower. **Prices**, for selected cuttings of each variety, delivery commencing December, 1907, \$6.00 per 100, \$50.00 per 1000. Place your orders early. Visitors always welcome.

Chrysanthemum Mildew

Under extra culture the chrysanthemum is rather free from disease but under poorer conditions is subject to attacks of rust, anthracnose, two leaf-spots, and a powdery mildew probably *Erysiphe Cichoracearum*, by name, which attacks the leaves. In one greenhouse in this vicinity the latter is quite bad, and as others may be troubled with it either now or in the future a short description may not be amiss.

All mildews have two stages; (1) the Conidial, or summer stage when white or colorless "spores" are produced which propagate the disease over summer; and (2), the Perithecial, when the brown or black spores are formed which carry it over winter. The first is by far the less serious, and that is the only one so far as known, occurring on the chrysanthemum under glass. Hence with a little care the trouble, even when quite extensive, can be eradicated easily.

Certain kinds of chrysanthemums seem much more susceptible than others, Col. Appleton being an example. Other varieties as Ivory, Major Bonnafon, and Timothy Eaton, growing alongside of Col. Appleton badly diseased, were not affected. The characteristics of the disease are irregular white, woolly spots on the upper surface of the leaf made up of fine filaments (the mycellum, or growing parts), visible to the naked eye. When very severe, the spots coalesce and the leaf appears as if it were dusted with flour, and when as bad as this may appear on the lower surface. Under the lens or microscope the spots are shown to be colorless, cellular threads, with immense numbers of colorless oval bodies, the conidiophores, corresponding to seeds in higher plants.

Treatment. Plants grown entirely under glass are not liable to contract the disease. It is while they are growing out-doors that they become inoculated with the fungus. If strong, vigorous stock is grown the chances of attack are considerably lessened. For plants already affected sprinkle powdered sulphur (flowers of sulphur) over the diseased parts when they are dry, or if in the greenhouse, evaporate sulphur on the heating pipes.

R. J. Adams.

Peaches Under Glass

Editor of HORTICULTURE.

Dear Sir:—I have a house of peaches. I do not know this variety. How should I force them so as to get them ripe about June, or earlier? Also Cardinal, Alexandra Noblesse, Early Rivers, Thomas Rivers.

Yours truly,

G. F.

If nothing has been done to the trees they should be pruned and cleaned at once and tied up. Take off the top soil about two inches and apply a good top dressing of bone meal and cow manure and cover this over with soil. Give the border a thorough watering three days in succession and be well satisfied that the border is wet through, else when the sap begins to flow the buds will drop off.

Keep the temperature at 42 degrees to 45 degrees at

night, 45 degrees to 50 degrees by day fire heat, and 55 to 60 by sun heat. Care must be taken to start them slowly. Syringe the trees and dampen the floor four times a day until the flowers open. When they are in flower keep the house dry. Shake the trees three or four times a day to set the fruit. When set raise the temperature to 50 degrees at night and correspondingly by day.

Thin fruit when the size of marbles, raise the temperature to 55 degrees to 60 degrees at night and do not increase the night temperature until they have stoned; then it can be increased to 60 degrees to 65 degrees at night. When the fruit begins to ripen give all the air possible day and night and withhold water from the roots and trees, which will give them a higher flavor.

Early Rivers and Cardinal should be ready by the first of June if started at once. The most important things in raising peaches are to start with a low temperature and increase it gradually; have the house and vines clean; never allow the foliage to be wet after sundown; syringe thoroughly on every favorable morning; give abundance of water when fruit has stoned, and withhold water when they begin to ripen and give plenty of air day and night when ripening.

James Wheeler

Asperula

When in flower *Asperula longifolia* is so much like *Gypsophila paniculata* that the writer has known many gardeners to take the former for the latter at first sight. Unfortunately *Asperula longifolia* is not so well known otherwise it would become just as popular. These beautiful hardy plants come into bloom a few weeks earlier than *Gypsophila* which makes them all the more valuable and with the well known *stevias* for winter flowering their most useful flowers can be had for decorative work almost continuously throughout the year. *Asperula longifolia*, *A. hirta*, *A. Areadiensis*, *A. Carpathica* are the only ones of particular merit in this family and ought to be in every hardy plant collection. *A. Areadiensis* is a charming little plant for the rock garden and also for hanging baskets. The flowers are pink and about one inch long with dense woolly foliage and it is the most attractive of the dwarf species, particularly when grown under glass. As a general rule most of the *asperulas* are increased by division. *A. Areadiensis* is such a slow growing species that cuttings are recommended. The *asperulas* mentioned here are all in commerce and can easily be secured. They will grow well in any ordinary garden soil.

times almost the entire value wiped out by bruising and tearing. It is a fact that those establishments known to receive the highest market returns for their product give the greatest of care to the time and method of handling and shipping and that the beautiful condition in which their goods reach the consumer is due in no small degree to this attention. The percentage of profit on cut flower growing at the present time is not so large that one can safely take the chance of carelessness in any of the processes through which his produce must pass to get to the hands of the consumer.

The position taken by President Lemon in his address to the Carnation Society as to what the certificates of the Society do and do not stand for is logical and provides a very safe mooring for the organization on this treacherous question. As advanced in our editorial last week the qualities that go to make a carnation a commercial success, from the cut flower standpoint, are not always demonstrable on the exhibition table and the Society does well to place itself on record to this effect. The propensity to pronounce varieties "worthless," on the one side because they do not size up to the exhibition scale of points or, on the other side, because they prove unprofitable commercially, has been indulged in perhaps too much. Mr. Lemon is right, everlastingly right, in advocating the utmost freedom in the admission of the products of the members of the society to the exhibition table. The judges will quickly decide as to their worth or worthlessness as measured by the exhibition standard and the trade may have a word to say, later on, from a quite different viewpoint.

Another praiseworthy recommendation by President Lemon is the suggestion that the American Carnation Society put into effect some plan for displaying the adaptability of the carnation for various decorative uses. In this particular all our special societies have been conspicuously remiss. The grower should be the first to demand that this feature be given more attention by those who are entrusted with the preparing of prize schedules or the management of exhibitions. It is well to display to the public the beautiful products of the skill of hybridizer and grower but the welfare of these is inseparably woven with the disposal of these products after it has left their hands and the mission of the Society in advancing the interests of its members and the art to which they are wedded is only half-accomplished until the public have been awakened to the possibilities in the decorative use of such material. There are other points upon which Mr. Lemon speaks with that wisdom which comes only from experience and observation. Altogether we regard it as one of the best papers ever presented before the American Carnation Society and well-worthy of a careful perusal by those who were not present to listen to it.

It is hard to comprehend the flower grower who, having turned out a credit-able product, handles it as he would any old rubbish. While this abuse is less frequent than it was a few years ago yet one does not have to look far in the wholesale markets to find good roses, lilies and similar things giving evidence of care-lessness, rough handling and packing, sufficient to reduce their selling value one-half or even much more—some-

Costly carelessness

NOVELTIES AT WA-NO-KA GREEN-HOUSES.

Our illustrations on this page show three very handsome houses of carnations, all novelties, two to be introduced in 1908-9 and one in the following year. The establishment at Barneveld, N. Y., known as the Wa-No-Ka greenhouses, was originally that of H. H. Nicholson & Co., and the firm is now composed of H. H. Nicholson and A. O. Grasl, the latter gentleman being an expert grower and successful hybridizer of carnations. The following interesting descriptions of the three varieties shown in the illustrations are as given by the originators:

"Apple Blossom," a gorgeous, full, white, with a delicate pink blending in the centre of the flower. Flowers borne on long, stiff stems, very fragrant, and in great profusion through the season. Calyx does not split, and the flowers have excellent keeping quality. Best grown in night temperature of 48 and 50 degrees. This variety is distinctly of the "Bread and Butter" sort, because of its prodigious blooming quality. Flowers average three inches through the season. To be disseminated during the season of 1908-'09.

"Wanoka," named from the Indian word, "Wah-No-Kah," meaning "Just one of its kind." A superb, well formed and fragrant Crimson, of remarkable production, and borne on extremely long and heavy stems. It succeeds best in night temperature of 50 degrees. The calyx never splits, and the flowers average three inches and are first-class shippers. To be disseminated during the season of 1908-'09.

"Climax" is a shade or two deeper than Enchantress, a color long desired by the growers and the public. The color is permanent and does not fade. Flowers do not have the irregular form of Enchantress, are very fragrant and excellent shippers. They average the season through, three inches, and from December to April are 3 1-2 inches and over. The calyx is remarkably strong and seldom splits. Best grown in night temperature of 48 and 50 degrees. Will be disseminated during the season of 1909-'10.

PERSONAL.

John Mitchell, Cabot street, Beverly, Mass., is seriously ill at his home.

G. B. Wiegand of Indianapolis, Ind., starts on February 1 on a two months' trip to California.

William Brown, florist, Mansfield, Mass., has recovered from his recent attack of pneumonia.

E. T. Mische of Madison, Wis., has accepted a position as superintendent of parks in Portland, Ore., and will assume the office in March.

R. S. Williams, of the N. Y. Botanical Gardens, sailed on January 25 for Panama in search of orchids and plant novelties. He expects to return in May.

AMERICAN CARNATION SOCIETY.

A Successful Convention, Interesting Sessions and a Superb Exhibition at National Rifles Armory, Washington, D. C.

Tuesday, January 28th, opened with bright skies and balmy weather, and Washington's welcome to the carnationists of America was thus gracefully accentuated by Nature's serenity, following so closely upon the wild blizzard of a few days before and so marked in contrast with the weather conditions which have so often dismayed the votaries of the divine flower. The forenoon was spent in fraternal greetings between friends who meet thus pleasantly once or twice a year and the important work of staging and classifying the exhibits. A brief meeting was held in the ante-room for the purpose of selecting judges, and Messrs. M. A. Patten, Peter Fisher and S. J. Reuter were chosen for this important duty. At 1 p. m. the hall was cleared and the judges took possession. It required most of the afternoon for their deliberations. Their report, presented and accepted at the evening session of the Society, will be found in its proper place in the pages that follow.

THE OPENING SESSION.

The opening session of the American Carnation Society was called to order promptly at 7.30 P. M., on Tuesday, January 28, by Mr. Peter Bisset, president of the Florists' Club of Washington and vice-president of the American Carnation Society. After a few words of welcome in which he expressed his pleasure at the coming and congratulations on the work of the Society and felicitation upon the grand exhibition he introduced Commissioner McFarland, of the District of Columbia, who extended an eloquent welcome to the visitors, mentioning especially those from Canada, hoping that they would feel just as much at home as the United States members of the Carnation Society had been made to feel when they visited Toronto one year ago. He spoke enthusiastically of the work and expenditures so liberally given for the development and beautification of the National Capital. The carnation society, he asserted, stands for one of the most beautiful of flowers, and its visit to Washington on the eve of the birthday of President Wm. McKinley, who had so loved the carnation, was most opportune and fitting.

Frank R. Pierson, of Tarrytown, N. Y., voiced the sentiments of the Society in response to the words of welcome, not only on behalf of the United States members but of those across the border and reverted pleasantly to the cordial reception accorded last year by the carnation brethren. He told of the more than ordinary interest felt in the National Capital by the members of the Carnation Society,

which was an off-shoot from the great Society of American Florists, which was the proud possessor of that unique document—a National Charter—granted to them in Washington and bearing the signature of William McKinley. He hoped to see McKinley Day and the custom of wearing a carnation on that day become a national observance and a significant feature in American history.

J. H. Dunlop, of Toronto, followed Mr. Pierson, felicitously expressing the reciprocal good feeling of his countrymen. He said that there was no "dividing line" in the sympathies and aims of the florists, who go always hand in hand regardless of political affiliations, with brotherly love and a common purpose.

Mr. Bisset then introduced the president of the American Carnation Society, Fred H. Lemon, who was received with enthusiastic applause and then proceeded to read his opening address as follows:

ADDRESS OF THE PRESIDENT.

Gentlemen, Fellow Members of the American Carnation Society:

It has been the custom for a number of years for the President to share in extending a welcome to the members of the American Carnation Society. Today the seventeenth President has the privilege and honor of sharing in the expression of thanks and appreciation for the hospitable reception and cordial welcome extended by the convention city.

It must be remembered at this time that the real work of preparation for this convention has been done by our most worthy vice-president, Mr. Peter Bisset, and his able assistants in Washington. Allow me to express at this time my personal appreciation of the unflinching courtesy, and the untiring zeal and activity of the vice-president, which, together with the efficient services of the secretary, made possible this most successful exhibition and convention.

Reference has frequently been made during the last few years to the subject of the society's certificate; it is a pleasure to refer to the eminently sensible and correct settlement of the controversy at the convention in Toronto last year. The remarks on the subject, by our honored member, Mr. W. N. Rudd, contain the best exposition of the aims and province of the American Carnation Society to be found in all the society's literature. It is indeed true, as stated in these remarks, that "the certificate is nothing except an opinion of the quality of the flower shown at the exhibition. The commercial value of carnations must

be shown in other ways; and it is beyond the ability of this society, beyond its province, to attempt to say whether or not a certain carnation shall prove a profitable investment to the buyer." I wish at this time to most emphatically endorse this position in relation to new varieties and to urge the society to encourage in every way possible the production of new kinds and especially the exhibiting of new things at our annual shows.

There has been a decided inclination, during the past few years, to belittle the value of the showing made by a carnation at the American Carnation Society Exhibition. Opinions of this kind have been expressed by many prominent members and have even crept into a number of addresses by our past Presidents. I desire to especially emphasize my opinion that any variety which can win the American Carnation Society medal, or obtain first place in one of our open-to-all classes, must possess many points of exceptional merit. The fact of its winning is prima facie evidence, and is incontrovertible, for the judgment is the expressed belief of at least two, and more often three, of the leading experts of the country, that such variety has produced blooms superior to any others of its class. The trade at large, and particularly members of this society, should accept this at its full value; that is to say, should recognize such action as coming from the highest tribunal and as being the best opinion obtainable in the United States on the subject. The idea that the American Carnation Society does thereby guarantee such variety to be a profitable one to grow commercially is a false position and should be avoided in the future. The society as a body can possess only the prescience of its integral parts, its individual members, and what man among us can unflinchingly predict a carnation's future even after studying the variety from all vantage points. The production of fine blooms is a prime requisite and with this alone should the society concern itself, leaving prophecies as to the probable future of a variety to individual judgment.

Any practical grower of carnations should consider the grant of a certificate or medal by the American Carnation Society as the very highest recommendation possible and amply sufficient proof of merit to justify a thorough test and earnest effort to grow the variety as well as it has been grown by the raiser.

However, there is one point in this connection which does come within the province of this society, and that is, the proper recognition of merit

which has been abundantly proven seven years ago, at Indianapolis, when the fatal illness of the President, Wm. J. Bertermann, placed me in the position of acting chairman, I suggested that the society ought to take some action commending the raiser of any carnation which has proved itself the premier variety of its class for a number of successive years. No attention was given the suggestion at that time, but my opinion has not changed on the subject. I believe that when any variety wins first prize in any class A (open to all) section, for three successive years, the raiser of such variety should be granted the society's gold medal fittingly engraved as an award of sterling merit. It is at least a subject worthy of discussion. There ought also to be a sweepstakes prize covering class A (open to all) sections.

To refer again to the certificate classes, I believe that the entrance fee in both preliminary and final certificate classes, should be omitted except when such certificate is granted, and that the only restriction placed on exhibiting in these classes should be membership in the society. This should be done for the purpose of increasing the number of exhibits in these classes. The judges may be depended on to properly sift such candidates.

Reference has been made annually, since the inception of this society, to the proposed exhibition of carnations in pots. Ex-President Rackham spoke of the matter in his address at Detroit. Mr. John Birnie made a strong plea for such varieties in his able paper at Toronto last year. Now to accomplish anything in this line will require a radical step by the society and it may as well be taken at once. Offer a good substantial prize for the best collection of plants in bloom in pots. To do this, reduce the breadth and scope of Class B, which, as it now stands, tends toward monotony in the exhibition.

Also, if it were possible to so divide the money devoted to premiums to admit of it, a certain amount ought to be devoted each year to exhibitions showing the adaptability of the carnation to reception and wedding decorations. Competitive contests among local retail men are not practicable, but some prominent retail man might be selected to prepare some such exhibit each year, as this would interest the public greatly and add to the beauty of the exhibition.

The very valuable papers from foreign carnation growers last year, together with the reports appearing in our trade papers from time to time, indicate the rapid strides being taken by our co-workers in England in the development of the Everblooming Carnation. Such reports should stimulate the activity in America for we should retain our supremacy in this line. Taking into consideration the formidable opposition in the securing of new varieties of carnations which the English breeders have now presented, would it not be a good thing to make some arrangement whereby new English sorts could be sent here for tests as to their adaptability to American conditions and markets? Probably some exchange of novelties could be made between growers in the United States and those in England

for this purpose. A great deal of interest is now being taken in American varieties over in England, and the same thing is likely to happen with English varieties in the United States; hence it would be well for the American Carnation Society to take the first steps aiming towards co-operation.

In the matter of the registration of new varieties, the opinion has been expressed by interested members that the society ought to omit all superfluous verbiage as to whether the new variety is better than others of its kind, and give simply the name, the parentage, the date when the cross was made, and the color. A uniform registration blank should be adopted and this should avoid any appearance of indorsing the good qualities of a new kind.

At the Chicago convention in 1907 no action was passed authorizing the offering of American Carnation Society certificates at the fall exhibition in our leading cities, and the appointment of judges for such exhibits. There was a committee appointed with power to act, but the plan never was carried out. This should be taken up and some definite action taken. The S. A. F. and O. H. has invited the co-operation of our society in the National Flower Show to be held in Chicago in November of this year, and we should offer our certificate and medals at that great exhibition.

It is with great pleasure that I look forward to the joint meetings with the American Breeders' Association. I hope and believe that much of benefit to the practical grower may result from the joint discussion on carnation breeding. If there is anything tangible as regards Mendel's law in relation to the breeding of carnations it should be brought out at this time.

The business sessions of the convention in Toronto were the best attended of any convention in a number of years. I am counting on the members to surpass that record in Washington.

In closing I desire again to join with the visiting members of this society in appreciation of the efforts of the Washington florists which have made possible a successful convention.

It is a high honor to be chosen President of the best, most business-like and most effective florists' organization in the United States, and I thank you most heartily for that honor.

Secretary A. M. Herr then presented his annual report, as follows:

SECRETARY'S REPORT.

Mr. President and members of the American Carnation Society:

Gentlemen,—Your Secretary reports having issued the regular printed matter of the Society during the past year. Our Annual Report was more complete than usual, thanks to our stenographer and the fact that being from my own city it could be worked out to better advantage than could possibly be done by correspondence.

The premium list and dates for the meeting were discussed and adopted at the meeting of the Board of Directors held in Philadelphia last August, quite a few changes being made in the premium list, and a three-day session agreed upon as an experiment, all of which was duly announced through the trade papers.

It has since developed that a portion of intending exhibitors are not able to get their flowers through in time for staging for 1 P. M. Tuesday. I would suggest that a portion of our meeting be set aside for the purpose of adopting a premium list, a set of rules governing the exhibition, and the best date for the opening of the show in 1909. With exhibitors, judges and the Board of Directors all present, mistakes and friction could be avoided. The exhibitor being the first consideration in our shows should have first consideration in our premium list.

In the opinion of your Secretary the matter of advertising in our premium list should be dispensed with. The members do not patronize it to any extent, even after personal solicitation and it is hard to get outsiders to look upon it as a good business proposition. For the one issued this year a circular letter was sent to all members of this Society, followed up by a personal letter to the possible advertisers (in some cases two and three) and in addition to this, personal letters were sent to about four hundred other advertisers with the results shown before you. The getting up of the premium list, aside from the solicitation, is almost as much work as getting out the annual report, and after deducting the extra cost of printing there is such a small margin of profit that it is hardly just to your secretary to pile all this work upon him.

A pet scheme of my own was tried this year and an invitation sent to every florist within a radius of one hundred miles from the meeting place to join the Society. The responses were two new members and several inquiries, a result that teaches its own lesson.

In addition to all of the foregoing there have been about seven hundred pieces of mail mostly personal letters in response to inquiries, and the regular correspondence between this office, your President and the Board of Directors.

Your Secretary requests that unless you have selected a successor for the coming year, he be continued in office for one year longer in order to use up stationery and other matter that would have to be changed and lost if a new one were elected, and that he then be released. The work of this Society is increasing in a ratio of about three to one as compared to membership; it is a work that ought to be done and for which the Society is not in a position to pay a competent salary, so that in making your selection it will be the part of wisdom to select a secretary who has leisure time to devote to this work and one who employs clerical help, to whom can be given the routine of the work. Your present incumbent having served the Society for thirteen years feels that with another year's service to break the hoodoo, he has borne his share of the work and that some one more competent and better able to give the time and labor required should take it up and carry it on to completion.

The report of Treasurer F. Dorner, Jr., was next presented.

Secretary Herr, on behalf of the Nomenclature Committee reported that the registration record for the past year was four seedlings and

three sports. They advised that the Society demand registration of all new varieties presented for the Society's consideration and that all sports be given distinctive names. The above reports were all duly accepted. A committee consisting of Messrs. Rudd, Baur and Fotheringham was appointed to consider and recommend such action as they deemed wise in accordance with recommendations in the President's address. Invitations to hold the next meeting in Indianapolis, Ind., and Pittsburg, Pa., were presented. The invitation to Pittsburg came from the Florists' and Gardeners' Club of that city, and told of the overwhelming wave of good feeling and hospitality that awaited the acceptance of the invitation. The State Florists' Association of Indiana on behalf of Indianapolis offered a Hoosier welcome and royal good time. Nomination of officers being next in order, the following names were presented: President, Marcellus A. Patten, of Tewksbury, Mass.; vice-president, Wm. Falconer, Pittsburg, and A. F. J. Baur, Indianapolis; secretary, A. M. Herr; treasurer, F. Dorner, Jr. Peter Fisher was chosen judge to succeed Wm. Scott, resigned, and Wm. Nicholson was selected to succeed himself. J. S. Wilson was chosen to succeed himself as director.

THE JUDGES' REPORT.

The judges then presented their report on the exhibition and same was duly accepted.

List of Awards.

The vases of 100 blooms each in Class A made a fine show in themselves. In white Cottage Gardens Co. took first with Alma Ward, and F. R. Pierson Co. second with White Enchantress. Light pink—Chicago Carnation Co., with Enchantress. Dark pink—E. G. Hill Co., Afterglow; second, Cottage Gardens Co., Mrs. Thomas Harvey. Winsor shade of pink—Cottage Gardens Co., with Mrs. C. W. Ward; second, Chicago Carnation Co. Winsor. Scarlet—Cottage Gardens Co., Beacon; second, John Reimels, seedling No. 32. Crimson—Cottage Gardens Co., Creole Beauty; second, J. D. Cockerolt, Harvard. White variegated—John Reimels, Variegated Lawson. Any other color—H. Weber & Sons Co., Torcadour; second, J. E. Haines, Imperial.

In Class B, vases of 50 blooms each of specially named varieties, the awards were as follows: Lady Bountiful—Stafford Flower Farms. White Perfection—F. R. Pierson Co.; second, S. J. Gouldard. Any other white—F. R. Pierson Co., White Enchantress; second, Stafford Flower Farms, Lieut. Peary. Enchantress, Chicago Carnation Co.; second, Stafford Flower Farms. Any other this shade—F. R. Pierson Co., Melody; second, H. Eichholz, Mrs. M. T. Onwaka. Winsor—Chicago Carnation Co.; second, Cottage Gardens Co., Pink Enchantress—F. R. Pierson Co.; second, H. D. Rohrer. Any other this shade—Chicago Carnation Co., Welcome; second, H. Weber & Sons Co., Genevieve Lord. Lawson—Potter, the Florist, Aristocrat, Chicago Carnation Co.; second, R. Witterstaetter. Pink Imperial—John E. Haines, Robert Craig—H. D. Rohrer. Red Chief—F. R. Pierson Co.,

Victory—F. R. Pierson Co.; second, S. J. Gouldard. Beacon—Cottage Gardens Co.; second, F. R. Pierson Co. Any other scarlet—Chicago Carnation Co., Andrew Carnegie; second, John E. Haines, J. E. Haines. Mrs. M. A. Patten—Cottage Gardens Co. Imperial—John E. Haines. Any other white variegated—F. R. Pierson Co., Variegated Lawson. Only one award was given in the crimson class—Cottage Gardens Co. for Octoroon.

The special premiums were well competed for and the centre of much interest. The Gold Medal for best vase of 100 blooms, any variety, any color, was won by Cottage Gardens Co. with Alma Ward. The Silver Medal went to R. Witterstaetter for Afterglow and the Bronze to Cottage Gardens Co. for Mrs. C. W. Ward. The S. A. F. medals for best vase of 50 blooms of carnations not yet dis-

Carnation Co. for White Perfection. C. A. Goldsmith's cup for 50 red, to Cottage Gardens' Co. for Beacon Harty's cup for largest display was won by the Chicago Carnation Co. The Vonderheide cup for 100 blooms of variety disseminated 1908 was awarded to R. Witterstaetter for Afterglow. The Berry & Whitmore cup for 50 light pink was not awarded. A preliminary certificate was given to M. A. Patten for his seedling, 46-205. Certificates of Merit were awarded to Joseph Heacock for light pink seedling No. 100, 86 points; to Wa-No-Ka Greenhouses for Wa-No-Ka, 86 points; and to H. W. Field for President Seelye, 89 points.

Besides the carnations the following exhibits were mentioned in the report of the prizes: "Queen Beatrice rose by F. H. Kramer, very fine blooms tastefully arranged. Two vases of rose Mrs. Jardine, very fine, fragrance remarkable, by Robert Scott & Son, Rhea Reid, a grand vase of roses from E. G. Hill Co. Nephrolepis superbissima, a fine new fern, F. R. Pierson Co. Three vases of Violet Boston, by Wm. Sim."

WEDNESDAY'S SESSION.

The session on Wednesday morning opened at 10.15 A. M., and Dr. B. F. Galloway was the first speaker, his subject being the work being done by the Department of Agriculture on the questions connected with the breeding and commercial cultivation of the carnation. Crossing selection, breeding, feeding, soils, insects and diseases were the various features touched upon. We expect to present Dr. Galloway's paper in full in a later issue. On the conclusion of his paper the members plied him with questions on many points of practical interest. In reference to the use of manures he said that cow manure is preferable to any other in carnation growing, but in violet culture there is little difference between this and other stable manures. He emphasized the comparative uselessness of bone fertilizer and referred to its frequent injurious effects. As to hardwood ashes he said that this was fairly beneficial to sweeten the soil and supply potash when same is needed but that there is danger in its over-use. Sandy soil is apt to give shorter stem growth but by wise use of organic manures this can be overcome. Bone manure may be more beneficially used in sandy than in a heavy soil and sheep manure used in a liquid form has proved valuable. But in short, there is more in the brain matter of the man who handles the soil than in the soil itself and good sense, application and general intelligence are the strongest factors in carnation culture as in all other things. A cordial vote of thanks was tendered to Dr. Galloway. Selection of place of meeting for 1909 was then taken up, Indianapolis and Pittsburg being in nomination. Coaxing and otherwise diplomatic speeches were made by a number of advocates of the two cities, and the proceedings were characterized with remarkable good nature. The ballots having been cast and counted, the tellers announced a tie vote, 83 for each city. Then came some fun, but it was cut short in a most generous motion by C. S. Crall of Monongahela City,

CHARLES MCCAULEY
Secretary Florists' Club of Washington.

Never has an exhibition been handled with such system and absence of disorder. The selection of Chas. McCauley as superintendent proved to have been a most excellent inspiration for he worked earnestly and to good purpose and everybody was pleased. The arrangement of the tables was excellent.

seminated were won by the same varieties—Silver Medal to Cottage Gardens Co.'s Alma Ward and Bronze Medal to Witterstaetter's Afterglow.

The H. F. Michel vase for 100 blooms, grown by private gardeners, was awarded to Wm. Kleinheinz. Peter Bisset's prize was won by the same exhibitor. Peter Fisher's prizes for 50 Beacon were won by Cottage Gardens Co., F. R. Pierson Co., Stafford Flower Farms respectively. Geo. H. Cooke's prize for 25 pink was awarded to Joseph Heacock for seedling No. 100. Geo. C. Shaffer's prize was won by Henry Eichholz. S. C. Briggs' prize for best vase of 50 white went to Cottage Gardens' Co., for Lieut. Peary. John Robinson's prize for 25 Winsor was won by Cottage Gardens' Co. Z. D. Blackstone's prize for 50 white was awarded to Chicago

representing the Pittsburg advocates, that a unanimous vote be cast in favor of Indianapolis, and thus the parliamentarians who had been sharpening their broadswords for a battle royal were quietly sidestepped and great jubilation followed. During the voting a discussion on the alleged imperfections of the premium list was under way, and the matter was finally turned over to the executive committee, with request to report before close of convention. An announcement by the president that President Roosevelt would receive the members of the American Carnation Society and the Breeders' Association at 2.30 on Thursday afternoon was received with applause.

On Wednesday afternoon the Carnation Society united with the American Breeders' Association under the auspices of the latter organization, and the feature of the session was an address by Dr. Alexander Graham Bell on Heredity. Those members who were present enjoyed a rare treat. The program was as follows:

Original Work Among Native Roses, by W. Van Fleet, Little Silver, N. J.
Some Observations in Plant Improvement, by A. M. Soule, Athens, Ga.

Report of Committee on Breeding Roses, by Peter Bisset, Washington, D. C.

Development of the Immune or Resistant Character in Plants, by H. L. Bolley, Fargo, N. Dak.

Report of Committee on Breeding Carnations, by C. W. Ward, Queens, N. Y.

The evening session opened with a paper by S. S. Skidelsky on "What the grower should expect from the introduction of a new seedling."

Mr. W. N. Rudd followed with a brief statement of the question from the standpoint of the introducer. Fair dealing was his text and he proved his case. F. R. Pierson followed with a lucid statement of the position of the introducer who he claimed had not been fully appreciated. Irving Gingrich's paper on cultural methods for carnations was next read by John H. Dunlop.

The question of the National Flower Show was then broached by Mr. Rudd, who asked that the Carnation Society stand sponsor for the carnation and offer some medals for competition at that event next November. W. F. Kasting followed in approval saying that the Carnation Society should be interested as well as any other and that it was not a question of money but of co-operation. Three medals were appropriated by unanimous vote and it was decided that the regular judges of the Society should officiate on behalf of the Carnation Society in making the affidavits.

THURSDAY'S SESSION.

Thursday morning's session opened with election of officers. Mr. Falconet's name having been withdrawn as candidate for vice-president, unanimous ballots were cast for all the officers and the chair announced the following as elected for ensuing year: President, M. A. Patten; vice-president, A. F. J. Baur; secretary, A. M.

Herr; treasurer, F. Dornier, Jr.; director, J. S. Wilson; judges, Peter Fisher and Wm. Nicholson. Vigorous and interesting discussions ensued on the recommendations in the President's address and other topics. It was voted that in future no charge be made to members for certificate entry or registration of new varieties, also that the directors may recommend to the society the award of a special gold medal of merit to the originator of any variety which has maintained commercial superiority for a number of years. It was also voted that hereafter no unregistered variety be allowed in competition at the exhibitions.

M. A. Patten, W. P. Craig and A. J. Baur were appointed committee on final resolutions.

At two o'clock the members assembled at the hall and proceeded to the White House, where they were cordially received by President Roosevelt. On returning to the hall, business was

MRS. A. M. HERR

We were sorry that in the gallery of Carnation Society notables last week we were not able to include the portrait of Mrs. Herr who, with all due respect to her busy husband, has been one of the indispensable attaches of the Society, ably aiding the secretary in the clerical work and endearing herself to every attendant at the convention by her ever-ready courtesy and tact.

resumed and paper by R. Witterstaetter, Prof. J. B. Norton and C. W. Ward were read, the latter illustrated by many beautiful stereopticon views.

The banquet on Thursday evening at Rauscher's was a magnificent affair. The floral decorations were superb, and the speeches brilliant. A full account will be given in next week's issue.

PRESIDENT-ELECT PATTEN.

The American Carnation Society conferred its highest gift on a man eminently worthy of the distinction when it selected for its standard bearer for the coming year, by a unanimous vote, Marcellus A. Patten of Tewksbury, Mass. Fitted by nature with the intellectual gifts and manly attributes, and by experience with the

skill and practical knowledge which go to make up the ideal chief officer of such an institution, Mr. Patten brings to the office that dignity, character and fitness which promise the highest efficiency in the coming year. Mr. Patten is a native of Lowell, Mass., having been born in that city in 1849. His first experience in floriculture was with W. C. Strong & Co., Brighton, Mass., and later with Weiland Bros., Cambridge, after which he went into the florist business on his own account in Lowell. Subsequently he disposed of his Lowell interests and built a range of houses at Tewksbury, where his abilities as a carnation grower soon commanded wide attention at the exhibitions of the Massachusetts Horticultural Society, the American Carnation Society and the Gardeners' and Florists' Club of Boston, with all of which organizations he has long been identified, his flowers have won high honors and he is accounted one of the most skilful carnation growers for the Boston market.

BRIEFLY TOLD.

W. R. Smith was missed from the convention hall but he received many calls at his home in the Botanic Garden where he was confined by a slight attack of grippe.

F. H. Lemon proved to be an ideal presiding officer. Cool, courteous, well-balanced, firm when necessary and never at a loss to define his position, he held the reins like a professional.

The three day scheme seems to have demonstrated its desirability, affording abundant time for deliberation, gratulation and observation and no doubt will be the rule for carnation conventions henceforth.

Much comment was heard concerning the small number of Boston entries in the exhibition. The explanation is that the express company would not agree to deliver Boston shipments in time for the judging at 1 P. M., Tuesday.

Secretary Herr's announcement of his intention to withdraw from the secretaryship next year makes a new problem for the Carnation Society. Secretary Herr has been a faithful, hard working official and his place cannot easily be filled.

Only once before in its history, on the occasion of its second visit to Boston, has the Carnation Society been favored with fair weather and moderate temperature. Washington did nobly and the weather man has our sincere thanks.

According to time-honored custom the Boston delegation had its annual symposium in the innermost cave of the palace on Tuesday-Wednesday midnight and subsequent hours. No casualties except to the baked beans, codfish and other delicacies dear to the New England gourmet.

Indianapolis was congratulated on its gracious and graceful acceptance of defeat by Washington last year but Pittsburg has beat the record with its unanimous proposition in the face

of a tie vote to make the selection unanimous for its opponent. It was a master-stroke.

Winona, Dorner's lovely pink variety, showed up beautifully on the second day. It is a superlatively good keeper. Wa-No-Ka made a splendid impression as a crimson. It also displayed fine keeping qualities. President Seelye, the Northampton sensation, was also pointed out as a splendid acquisition.

Among the more sensational features of the exhibition were the exhibits of W. N. Rudd, 51 hours on the road from Chicago, arriving on Wednesday morning in remarkably fine condition. The varieties were two seedlings, 1605-A, white, and 28103-A, rose pink, both dangerously near the four-inch class and evidently in it for future honors. Another good thing is Mr. Heacock's No. 100, much resembling Rose Pink Enchantress, but with a better built flower than that popular variety; a seedling of Enchantress crossed with Lawson.

CANADIAN POSTAGE DISCUSSION.

Consul James H. Worman, of Three Rivers, makes the following report on a movement in Canada to secure the former postage rates on periodicals to and from this country:

Newspaper publishers in the Province of Quebec have petitioned the Dominion post-office department to restore the old rates on newspapers and magazines between the United States and Canada, a six months' trial of the new rates having proved the injurious effects to the Canadian press and people.

The Montreal French chamber of commerce has also urged the repeal of the new regulations, and its committee appointed to look into the matter has reported. It was held that any restriction placed on the circulation of Canadian papers in the United States and in other foreign countries would prevent this country from being known and appreciated; that it would tend to neutralize the patriotic efforts of the Canadian press, and that it would unfavorably affect immigration to Canada as well as the repatriation of French Canadians. Persuaded that in the interests of colonization and commercial prosperity the country needed far more advertising than was given to it in the press, the chamber of commerce had requested the federal government to further such advertising by the creation of a commercial museum and the distribution of explanatory guides on the resources of Canada. The committee states also that the circulation in this country of American magazines is of great advantage to trade and industry, both from a scientific and a news standpoint.

Inclosed please find check for \$2.00 for two years' subscription to HORTICULTURE, which I value very highly and look forward to with pleasure each week. Wishing you the best of success and a happy and prosperous new year.

FRED C. GREEN.

Warwick, R. I., Dec. 30, 1907.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

National Flower Show Premium List.

The premium list for the National Flower Show is now in press and will be ready for mailing on February 15th. Many changes have been made in the list originally published in the trade papers and the same has been largely increased.

It is believed that the complete list carries the largest amount in premiums, medals, cups and trophies ever offered at any floricultural exhibition at any time. Suggestions for premiums have been made and revision of all or parts of the list by about one hundred individuals and firms and it is hoped that in the form in which it will appear on the above date all classes of exhibitors will be found to be amply provided for.

It should be noted that the suggestions made to the committee if all had been carried out, would have required over five times the large sum of money which was available. This condition, of course, made it necessary to strike out many desirable suggestions. All suggestions, however, were given equal consideration on their merit without regard to the names of the persons making them.

Copies of the list may be obtained on application to Mr. J. H. Burdett, secretary, 1111 First National Bank Building, Chicago.

The thanks of the committee are tendered to those public spirited and generous firms and individuals who have responded so nobly.

The many others who intend making similar offers are urgently requested to "HURRY UP" so that all may be included in the preliminary list now in press, as otherwise proper publicity and a good competition cannot be secured.

W. N. RUDD,
Chairman Premium Committee,
Morgan Park, Ill.

The following is the list of special premiums offered up to date.

American Florist Co., 324 Dearborn Street, Chicago—Cup, value \$25; class not yet specified.

B. K. & B. Floral Co., Richmond, Ind.—For 50 blooms Sarah Hill carnation, \$8 first; \$5 second; 50 blooms Lawson-Enchantress carnations, \$8 first; \$5 second.

Chicago Carnation Co., Joliet, Ill.—50 blooms Andrew Carnegie carnation, \$12 first; \$8 second; \$5 third.

Chicago Florists' Club, Chicago—Trophy value \$50; class not yet specified.

Chrysanthemum Society of America—Cup for 10 blooms, one variety chrysanthemum, any color.

W. W. Coles, Kokomo, Ind.—Cash, \$10; class not yet specified.

Win. P. Craig, 1205 Filbert Street, Philadelphia, Pa.—Cup, value \$30, for 50 blooms Mrs. Jardine rose; grown by grower with not more than 50,000 feet of glass.

The Albert Dickinson Co., West Taylor Street and the river, Chicago—Cash \$25; class not yet specified.

A. Dietsch Co., 615-621 Sheffield Avenue, Chicago—Cash \$10; class not yet specified.

Henry A. Dreer, 714 Chestnut Street, Philadelphia, Pa.—Cash \$200; classes not yet specified.

W. A. Manda, South Orange, New Jersey—Ornament set with precious stones, value, \$250.00; class not yet specified.

Knoeshell Bros. Co., Chicago—Gold, \$25.00; best vase carnations not less than 25 blooms any variety in commerce; must be grown in houses heated by hot water. Gold, \$25.00; to the exhibitor using hot water exclusively for heating, who wins the greatest number of prizes at the show.

Foley Manufacturing Co., Chicago—2 silver Cups each \$25.00; class not yet specified.

Viotor Bros., Chicago—Cash, \$25.00; class not yet specified.

MASSACHUSETTS HORTICULTURAL SOCIETY.

The January exhibition, held on the 25th inst. at Horticultural Hall, Boston, brought out some very interesting things in addition to the primulas, violets, carnations and vegetables grown under glass, for which provision was made in the prize schedule. The most notable exhibit was a group of beautiful specimens in pots of *Celsia Arcturus* from Wm. C. Ritchie, gardener to Mrs. J. M. Sears. This plant has never to our knowledge been shown in this form here, and it is a pity that so few plant growers were present to note its excellent qualifications for the florists' window when grown thus, compact and with several stocky spikes of brilliant yellow flowers to each plant. Mr. Ritchie was awarded a cultural certificate. Two plants of the same species were shown by Dr. C. G. Weld. W. A. Riggs showed blooms of *Leptosyne maritima*. These bright yellow flowers, not unlike small single sunflowers, should make an acceptable mid-winter cut flower.

T. T. Watt, gardener to Mrs. H. F. Durant, showed two novelties worthy of note—*Calceolaria fuchsiaeifolia* and *Schizocentron elegans*. The former, although not new, is seldom seen. The flowers are yellow and the foliage soft green; it has no marked value as a florist's subject. *Schizocentron elegans* or *Ileeria Mexicanum* (?) is a prostrate plant with small dark foliage and magenta pink blossoms, and makes a very pretty, drooping, pot or hanging-basket specimen. It was awarded honorable mention. *Corydalis Wilsoni*, shown by Walter Hunnewell, was another interesting novelty, with finely cut, very glaucous foliage and racemes of drooping yellow flowers, somewhat weedy in effect. It received honorable mention, as did also some superb specimen *Lorraine begonias* from R. & J. Farquhar & Co.

The primulas were very fine. On *sinensis* E. J. Mitton, Dr. C. G. Weld and Mrs. J. M. Sears; on *stellata* Mrs. J. L. Gardner; on *obconica* Dr. Weld, Mrs. Gardner and Mrs. Sears, were the prize winners in the order as named. *Primula Kewensis* was shown in fine form by Dr. C. G. Weld and Gen. S. M. Weld, Thos. Coles, gardener.

Violets were limited to two varieties, *Lady Hume Campbell* and *Princess of Wales*, the exhibitors being H. F. Woods, H. T. Calder, W. B. Goodnow and Mrs. F. Ayer. Carnations made a splendid show. Prizes were distributed mainly between S. J. Goddard, M. A. Patten and Backer & Co. Goddard's, Helen Goddard, *Rose pink Enchantress* and *Beacon*, Patten's *Winsor*, *Pink Patten* and *White Perfection* and Backer's *White Perfection* and Mrs. Patten were the most noteworthy. Wm. Nicholson had a splendid vase of *Afterglow*.

DETROIT FLORIST CLUB.

At the last meeting of the club the proposition to hold a flower show was abandoned. Nevertheless, next fall will bring forth a bigger and better display than ever before.

Twenty members accepted Theodore Mitchell's annual invitation to his home, where an inviting dinner and entertainment held them until a late hour.

LOUISIANA STATE HORTICULTURAL SOCIETY.

The fifth annual meeting of the Louisiana State Horticultural Society will be held in Minden, La., February 20, 21 and 22. The program will include discussions of subjects presented by the leading scientific and practical horticultural and agricultural men in the state. A representative of the United States Department of Agriculture will also be present.

The following subjects are among those on the program: Peach culture; The Cannery; Apple culture; Pecan culture; Good Roads; Cut Flowers; Rose culture; Bird Life; The Nursery; Tomato growing; Plant Diseases; Fig culture; Grape culture; Small Fruit; Hedge plants; Care of the Orchard; Trucking; Insect Pests; School Gardens; Fertilizers; Home Improvement; School Grounds; New Vegetables and Fruits; Horticulture and the Railroads.

There will be illustrated lectures at the night sessions. There will be reduced rates on all railroads. North Louisiana needs horticultural industries. Fruit and truck are profitable when cultivated intelligently. Come and join the movement for diversification along the lines of horticulture. The proceedings will be published and sent to all members. Annual membership fee \$1. Join the society at once and secure the publications.

C. D. OTIS, President,
Lake Charles, La.
F. H. BURNETTE, Sec'r-Treas.
Baton Rouge, La.

ST. LOUIS HORTICULTURAL SOCIETY.

The annual meeting of this society took place on January 21 at eight o'clock P. M. In the absence of the president Vice-President Gundlach presided. The officers of last year were re-elected: President, E. W. Mallinckrodt; vice-presidents, L. Matthews, Alex. Waldbart, J. B. Gazzam, J. H. Gundlach; treasurer, Fred C. Weber; secretary, O. G. Koenig. Executive committee: Henry Young, chairman; C. B. Nicholson, C. C. Sanders, Theo. Miller, F. H. Meinhardt, F. W. Brockman, F. C. Weber, A. Meyer, Jr., A. Jablonsky, Emil Schray, O. G. Koenig. The executive committee meet next week to arrange for a flower show to be held during March.

LENOX HORTICULTURAL SOCIETY.

The regular meeting of the Lenox Horticultural Society was held January 18, President Jack in the chair. The schedules for the August and fall exhibitions were adopted as read. S. Carlquist was awarded a diploma for a fine vase of *Celsia Arcturus*. The annual banquet will be held at Curtis Hotel, Saturday, February 15, and promises to excel any affair of the kind ever given by the society.

The annual ball took place in the Town Hall, on Jan. 23. A concert by Clark's orchestra opened the event. A fine supper was served and the company included many out-of-town guests.

GEORGE H. INSTONE,
Secretary.

TWIN CITY FLORISTS' AND GARDENERS' CLUB.

On Jan. 21, about sixty Twin City florists and gardeners met at Holm & Olson's store, St. Paul, Minn., and perfected an organization. Discussion of things pertinent to the trade made the meeting a valuable one.

E. Nagel of Minneapolis read a paper on Bedding Plants. In this he told something of his methods of handling the plants and of selling. The discussion of this paper brought out the fact that florists were doing bedding work too cheap, and a committee was appointed to endeavor to fix prices that would be more fair to the grower.

The next meeting of the club will be held at the Park Greenhouse in Minneapolis in February. Theodore Wirth is president and S. D. Dysinger is secretary.

THE AMERICAN ROSE SOCIETY. Some More Prizes.

There is offered a silver cup, valued at \$25.00, by H. F. Michell Co., seedsmen, of Philadelphia, Pa., for 50 blooms of *Kate Moulton* rose.

F. R. Pierson Co., Tarrytown, N. Y., offer a silver cup, valued at \$25.00, for the best new rose not in commerce nor yet exhibited before the American Rose Society.

There has been mailed to every florist or grower located in Chicago a copy of the schedule for the annual exhibition.

August Poehlmann, Morton Grove, Ill., is duly appointed chief of the Executive Committee to represent on the spot the American Rose Society.

Any entries, prizes or other matters should be forwarded to the secretary of the society.

BENJAMIN HAMMOND,
Fishkill-on-Hudson, N. Y.

ATCO, N.J.

Seed Trade

Reference was made in last week's issue to possible governmental control or supervision of the seed business, and while such supervision if exercised by persons ignorant of the business would be intolerable, yet, on the other hand, if under the supervision of an able and thoroughly practical horticulturist it might not prove an unmix'd evil. Assuming that government supervision is inevitable, the probable modus operandi would be the establishment of a bureau under the control of the secretary of agriculture and appointed by him.

Now whether this bureau would prove a success or failure, would depend largely on the man appointed as its chief. Presuming that he would be some practical seedsman, having the best interests of the seed trade at heart, his administration might be enduring, and in one respect at least he might render the trade some practical benefit—that is, in the field of nomenclature. Such a bureau could be modeled in some respects on the lines of the Patent Office, and any seedsman having a new or an improved strain he wished to introduce, should be required to submit the same to this bureau, and if after a thorough test it was found to be distinct or a marked improvement of an existing type a certificate would be issued giving permission for its introduction under whatever name the introducer might select, and requiring any one listing it to do so under the name given by the introducer, which would protect him in his proprietary rights much as the issuance of a patent to an inventor as an extra protection, a penalty in the form of a fine sufficiently heavy to make this class of piracy an expensive luxury could be imposed, such penalty to be recoverable in an action instituted by the introducer before any United States court.

No doubt objections can be urged against this plan, chief among which are the known variations in types in different soils and under varying climatic conditions. But there is no reason to suppose that these variations would be any more marked in new or improved strains of old varieties than in existing types, and it would effectually stop the multiplication of names which is the bane of the seed trade.

It was stated in last week's issue that the forthcoming Canners' Convention, in point of attendance and extent of machinery exhibits, would probably eclipse any previous convention, but information just received indicates that the machinery exhibit will not equal that at Buffalo last year. This is mainly due to the inadequate space available for that purpose.

It has been customary of recent years for the city chosen as the place for the convention to raise a fund for the entertainment of the canners. Buffalo last year raised \$2,000 for this purpose, and never has any city until now done otherwise. It has remained for Cincinnati to establish a precedent in this respect. Through the secretary of the Cincinnati League the hat has been passed, asking the Machinery and Supplies Association for subscription, and it goes without saying that

this action of the Cincinnati League has been received with ill grace. It has been the custom for the Machinery and Supplies Association to tender the canners some sort of an entertainment, and most of them think their expenses heavy enough without being called to contribute to the fund of any local organization. To say the least, this begging by the Cincinnati League is humiliating to their city and in very bad taste. It would be interesting to know who the instigators of this scheme are.

G. S. May has started in business in San Francisco under the name of the May Seed Co. He is located on Market street.

The Nashville Seed Company, Nashville, Tenn., has taken more spacious quarters at 215 N. Market street.

AMERICAN SEED TRADE ASSOCIATION.

The executive committee of the American Seed Trade Association met at the Auditorium Annex, Chicago, on Jan. 21. Members in attendance were President George A. Green, Vice-President M. H. Duryea, Secretary and Treasurer C. E. Kendel and Messrs. Henry W. Wood, C. S. Burge, Leonard H. Vaughan, Chas. N. Page and W. S. Woodruff. Detroit has been selected as the meeting place for the next convention, June 23-25. Headquarters have not yet been selected. The following resolutions were adopted:

The executive committee of the American Seed Trade Association recommends that its members still further emphasize and publish the Disclaimer by having it printed on all stationery, including letter-heads, bill-heads, quotation sheets, acceptances, labels and packages and to disseminate same to all merchant customers possible and to supply merchants with Disclaimer cards to be hung in a conspicuous place in the sales-room.

Cards will be furnished by the secretary free to members on request and to others at 10c. per copy, postpaid. C. E. KENDEL, Sec'y.

CLUB AND SOCIETY NOTES.

The State Horticultural Society met at Van Buren, Ark., on Jan. 21-23. W. K. Tipton spoke interestingly on evergreens.

The Florists' Club of Cleveland, O., have their carnation exhibition February 10. Certificates of merit will be awarded to all worthy exhibits. Isaac Kennedy is secretary.

The Southern Minnesota Horticultural Society at its annual meeting on the week of Jan. 12 elected L. P. H. Highby president and O. M. Peterson secretary, both of Albert Lea.

The nurserymen of Ohio organized at Columbus on January 15, with officers as follows: President, J. W. McNary; vice-president, Robert George; secretary, W. B. Cole, Painesville; treasurer, W. N. Scarff.

The fourth lecture before the American Institute of New York was on January 29, by Dr. G. H. Earp Thomas of New Zealand; subject, The bacterial life of the soil and relation of leguminous plants to same.

Rep. by FELIX BOSCH, 260 Claremont St., Boston

son, Wis., have elected new officers as follows: President, G. W. Reigle; vice-presidents, Edwin Sumner, Preston Brown; treasurer, F. F. Broman; secretary, James Milward, University of Wisconsin, Madison.

The St. Catherines Horticultural Society, Ont., at the annual meeting, elected officers as follows: President, W. B. Burgoyne; vice-president, W. H. Bunting; secretary, Miss L. Ratcliffe; treasurer, C. A. Hesson. The financial statement showed that during the past year the society had expended on flowers, fruit and vegetable shows almost \$3000.

The Worcester County Market Gardeners met at Horticultural Hall, Worcester, Mass., on Jan. 25 and elected the following officers: President, A. S. Wolfe; vice-presidents, H. W. Anderson, H. E. Stevens, C. Webb; secretary, H. R. Kinney. The subject of cucumber raising came up for much interesting interchange of opinion. Alfalfa raising was touched upon. Mr. Kinney said if the farmers of New England had devoted as much attention to red clover as they had to alfalfa they would be a great deal better off.

DREER'S SUPERB DOUBLE PETUNIAS

For half a century we have been making a specialty of **DOUBLE PETUNIAS** and our strain is accepted as second to none, either here or in Europe. We annually plant many thousand seedlings from which only the finest double fringed forms are selected for propagating purposes, thus improving the strain every season. We offer fifteen distinct varieties.

3-inch pots, 75c per doz.; \$6.00 per 100; the set of 15 for \$1.00.
2 1/4 inch pots, 60c per doz.; 4.00 per 100; the set of 15 for .75.

SEED OF OUR SUPERB STRAIN OF FRINGED PETUNIAS, Double, 75c per 500 seeds; \$1.50 per 1000 seeds. Single, 50c per trade packet; \$1.00 per 1 lb oz.; \$1.50 per 1/2 oz.

Our Quarterly Wholesale List offers a full line of seasonable Plants, Seeds and Bulbs.

HENRY A. DREER, PHILADELPHIA, PA.

GERANIUMS

Our 1908 illustrated GERANIUM catalogue is being mailed to the trade. It is the most beautiful and comprehensive that we have ever sent out. It contains descriptions of over 200 varieties, including the best Standard sorts, New Varieties and Novelties, gathered together from the leading introducers of America, England, Germany and France, making a collection which is the most complete ever offered to the American trade. Mailed free to the trade; if you do not get one write us, enclosing business card or letterhead. See last week's issue for miscellaneous stock, including Dahlia roots and Pelargoniums. Visitors always welcome. Cash with order.

NEWS NOTES.

Hitchings & Co. have removed to their new plant, Spring and Louisa streets, Elizabeth, N. J.

Joseph Foerster, formerly with George Reinberg, has taken a stand at the Flower Growers' Market, Chicago.

L. A. Green of Wood River, Neb., has purchased 22 acres of land at Kearney and will soon start in the nursery business there.

W. T. Twomey of Roslindale, Mass., while driving near the city stone yard recently, was attacked by two dogs and his arms were severely lacerated before help came.

William Ferguson of Haverhill, Mass. has formed a partnership with W. J. Kingsbury of Derry, N. H., who recently purchased the Smith greenhouses in that town.

Miss Gertrude Jones has purchased land in Brookfield, Mo., and will build a greenhouse thereon. She has engaged as assistant George Gatzkow of Washington Court House, O.

The new greenhouse at City Park, New Orleans, is completed. The work has been under the supervision of Julius Koch of the Park Improvement Association, and the house and its appointments are among the finest in the South. About \$12,000 have been expended.

The annual Boston Flower Market Exhibition will be held at 1 Park St., Boston, Feb. 29, 1908. Premiums and prizes to the value of \$500 are offered for new and standard varieties of carnations, roses, violets, etc. For list address Geo. Cartwright, 1 Park St., Boston. Committee of arrangements: W. H. Elliot, Peter Fisher, S. J. Goddard, E. Allen Pierce, Alex. Montgomery, M. A. Patten, Wm. Nicholson, E. Sutermeister, Wm. Sim.

The American Nursery Company has acquired all the real estate, property, business and good will of the well-known F. & F. Nurseries, Springfield, N. J., the Bloodgood Nurseries, Flushing, L. I., Frederick W. Kelsey, New York City, and the N. J. & L. I. Nurseries. These old-established and successful concerns will hereafter be

conducted as branches of the company under the same local management as heretofore. The officers of the company are: Frederick W. Kelsey, president; William Flemer, vice-president and treasurer; Theodore Foulk, vice-president; P. H. Goodsell secretary.

Judge Heisley, in the Supreme Circuit Court set aside a recent jury verdict and granted a new trial in the case of W. A. Manda against the city of Orange, which condemned part of Manda's property for its water line right of way. A substantial price was offered Manda for the tract, and when he refused the offer a commission was appointed to fix a proper price and did so, setting \$700 as the figure. Manda appealed to the Supreme Court and a couple of months ago a jury said the property should be valued at \$1600 instead of \$700. Manda was satisfied with this, but Orange was not and asked for a new trial. The argument came up before Judge Heisley on Tuesday and today he granted the request.—Newark, N. J., News, January 23.

THE FLORISTS' SUPPLY HOUSE OF AMERICA

Without a rival in knowledge of the requirements of the trade and the ability to supply them. Our New Illustrated Catalogue, recognized as a work of art unprecedented in its line for variety, novelty and completeness, tells the story fully, and if you have not yet sent for it, do so now.

'TIS FREE TO EVERYBODY IN THE TRADE

H. BAYERSDORFER & CO., 1129 Arch St., Philadelphia, Pa.

FLOWER MARKET REPORTS

BOSTON Market conditions have not improved over last week. With an abundance of stock all along the line and but little trading, prices have fallen considerably. Carnations are a glut in the market, while violets, roses, sweet peas and jonquils are doing but fairly well.

A mixture of all kinds of weather being on the past week made the supply heavy one day and short the next, which kept the wholesalers guessing. Teas were scarce, especially the short grades, which were in heavy demand as floral work was plentiful, and a good portion of other stock such as lily of the valley, sweet peas, tulips, freesia, and lilies had to be substituted. On Richmonds and selected teas prices held firm and on some lines went up a notch, and the only report received from growers was "off crop, best can do." Carnations in light colors were well cleaned up, but a good many Lawsons and dark colors of ordinary quality were carried over to Monday. Violets were in good supply but a little weak as to prices, the quality being good. Spring flowers are coming in more plentifully; daffodils and yellow tulips sold well; white Lorraine with short stems seemed to remain. Southern smilax is in better demand; other greens are quite abundant.

DETROIT Business the past week has been very satisfactory. Bulbous stock of all descriptions is coming in in good quality and selling at good prices.

INDIANAPOLIS There has been a decided improvement in the movement of all kinds of cut flowers the past week which means a fairly clean market. There is nothing rushing but just enough demand to take care of the supply. Good Beauties and teas are not over-plentiful, the top grades bringing good prices. Bulbous stock lilac, violets and sweet peas have been moving better than before, Callas and Harrisii are sold on sight. Roman hyacinths are about the only thing that is in over-supply. Freesia is now coming in in good quantities. Orchids of many varieties help to make attractive retail windows. Not a florist in the larger cities whose trade is worthy of the name is without the orchid now. Trade in pot plants of all kinds is rather slow. There is quite a trade in green goods, galax and leucothoe being used in large quantities.

PHILADELPHIA The sluggish conditions we have experienced for some time still continue here. Trading is half-hearted all along the line. Still, we presume it is no worse than elsewhere. One New York wholesaler who honored us with a visit the other day remarked that things in the metropolis were such that he run away to Philadelphia for a short spell to escape them. There is nothing new to report in the rose or carnation markets. Beauty roses still continue of good quality and ample supply for the demand. Bride is in excellent demand and one of the most satisfactory subjects at present. Killarney is also

good. In carnations the Beacon stands out conspicuous and brings top price. Lily of the valley has recovered a little and is now moving rather better. Sweet peas sell fairly well but prices are still too low for profit. Trumpet daffodils from nearby sources are well received and prices are fair, all things considered. Crops of paper whites have shortened up and these are now in healthy demand at fair prices. Tulips have commenced. La Reine and Couronne d'or principally, so far. Lilac, mignonette, Easter lilies continue good, and move out reasonably well.

The flower market **TWIN CITIES** has been very steady this last week. Carnations, violets, paper whites, tulips and daffodils are plentiful and good. Roses, with the exception of American Beauties, are getting short in both Minneapolis and St. Paul.

PHILADELPHIA NOTES.

"Indoor Culture of Carnations" will be the special subject up for discussion before the Florists' Club of Philadelphia the first Tuesday of February. Edmond A. Harvey, Brandywine Summit, will be the orator.

Arthur Niesseon, of the Leo Niessen Co., is inclined to agree with many other experts that Bridesmaid rose has reached "the old-maid" stage of its existence, and that we will have to look for new blood for the future. He thinks also that such roses as Killarney are in a class by themselves, and not to be considered as competitors for "the new Bridesmaid" honors.

The impression prevails with many that our propagating method is largely responsible for the running out of our forcing roses. P. J. Lynch recommends instead the use of summer propagated, winter rested, own-root stock grown from roses that have never been forced. If this is done he is positive he will hear less of our good old roses running out. Paste that pointer in your hat. It is from a man who has made a life study of the subject.

Ernst F. Hoehl, late of Madison, N. J., now occupies the Bunting place at Fifty-eighth and Elmwood avenue. He is making a specialty of sweet peas and carnations.

A handsomely illustrated circular of the new rose Mrs. Jardine is being sent out by the Pennock-Meehan Co.

Early chrysanthemums are being featured by the Michell Co. this spring. Golden Glow, Lynwood Hall, Pacific Supreme and White Cloud are the gems of a collection embracing some thirty varieties. A colored plate of this flower occupies the front cover of their catalogue.

The Philadelphia delegation to the carnation convention included among others Dennis T. Connor, William P. Craig, Edwin J. Faneourt, Edward A. Stroud, W. Beattie, S. S. Skidelski, Robert Kirt, Samuel S. Pennock, J. Girvin and Wm. Kleinboinz.

Bargains in Plants

If you want bargains in plants watch the ads appearing

Exclusively in Horticulture

The Philadelphia Plant Exchange is just what it's name implies:—

BARGAINS to YOU!

We hunt for them, and our guarantee goes with every one! Personal inspection and guarantee.

This week's Bargain offers

LOT No.		EAch
101	300 Kentia Forsteriana, 6 in.,	\$1.50
102	200 " " 7 in.,	2.00

The above two lots Nos. 101 and 102 are **made up plants**, clean and well furnished. A decided bargain at the price.

CARNATION CUTTINGS

LOT No.		100	1000
103	4000 Boston Market	\$2.00	\$18.00
104	3000 Enchantress	2.50	20.00
105	3000 Joost	2.00	17.00
106	3000 Marion	2.00	17.00

FERNS AND RUBBERS

LOT No.		100
107	1000 Mixed Ferns, 3 in., 12 vars.	\$7.00
108	400 Whitman, 4 in.	25.00
109	500 Todaeoides, 2½ in.	20.00
110	500 4 in. Rubbers, fine plants	25.00
111	500 Rubber Cuttings, (well rooted)	15.00

Send us your orders or inquiries for anything you want. The above is only a sample of the immense stocks of fine plants behind our organization.

Also if you have anything to sell, let us know. If your stock is all right, after our personal inspection, and such as we know will please our customers, we will handle it for you and find a market, but it must be first class and a bargain. Our only charge is 10% on sale price.

Don't Grow Crops there's No Demand For

Write us first. We cannot handle anything unless it is first class in every way. That's the meaning of our guarantee to customers.

WANTED at once, to lease in Eastern States with privilege of buying, 5,000 to 10,000 feet of glass, with some land, suitable for retail trade or market gardening. Give full particulars in first letter. Address Horticulturist, care HORTICULTURE.

leaves a widow, two sons and three daughters.

Christopher H. Shaffer.

Christopher H. Shaffer, of Cascade, la., died on January 7, aged 84.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Department of Plant Registration. Mr. Paul Niehoff, of Lehighton, Pa., desires to change the name of his pink rose registered as "Aurora" to "Mrs. Mary Niehoff," as he learned that there is a European variety bearing the former name. W. N. RUDD, Sec'y.

OBITUARY.

William H. Ford.

William H. Ford died at his home in Salem, Mass., January 19. He was rounding out eighty-seven years of life, thirty of which had been spent at Pride's Crossing, Mass., as superintendent of the Brimmer estate now owned by H. M. Sears. Born in Ireland, County Kilkenny, he came to America in 1850, and had charge of various large estates before he went to the Brimmer estate. The work here will long remain a tribute to his skill, the formal garden having few rivals in New England. For the last three years he has made his home in Salem. Of genial, kindly temperament, combined with rare qualifications and artistic abilities, Mr. Ford will be greatly missed by those who knew him. A widow and seven children survive. Charles B. succeeded his father at Pride's.

J. F. Noll.

J. F. Noll, born in Morristown, Pa., April 30, 1870, died at his home in Newark, N. J., on January 22. Mr. Noll was a pleasant, energetic, young man, and during the eight years in which he had been engaged in the seed business he built up a large trade. His widow will carry on the business.

James Henry Durkee.

James H. Durkee, a prominent agriculturist of New York, died on Jan. 25 at Sandy Hill. Mr. Durkee was born in 1848 in Fort Edward, graduated at Cornell, and held many positions of trust in agricultural organizations at the time of his death.

Simon Held.

Simon Held, aged 79, a well-known gardener, died on Jan. 19 at the Home for the Aged at Fair Oaks, Pa. He

Is Your Name In The Above List? If Not, Why Not?

PARK AND FORESTRY ASSOCIATION.

The Park and Forestry Association meeting was held in Lincoln, Neb., Jan. 23. An interesting program was given. E. C. Bishop, Deputy Superintendent of Public Instruction, spoke of planting and caring for trees on school grounds. E. F. Stephens of Crete, the veteran tree planter of Nebraska, spoke of the best varieties of trees for planting in the West. Prof. Chas. E. Bessey gave a very fine paper on the different kinds of poplars and emphasized the importance of planting the Norway Poplar, which is now so highly recommended by the Forestry Department. According to Prof. Bessey, this should be called *Populus laurifolia*. In the discussion connected with this tree, it was decided that it was the most rapid growing of any tree in the northern states. Thousands have been planted at the York Experiment Station and their growth was something wonderful. One year they made nine feet from cuttings. This year, fence posts were cut from four-year-old trees which measured fifteen inches in circumference, three feet from the ground. Prof. F. J. Phillips gave a very interesting account of the progress of the government planting on the Dismal River. The work there is succeeding admirably. C. S. Harrison, the president, spoke of the great debt which Nebraska owes herself which should be paid as soon as possible. He emphasized the fact that for over thirty years the saline lands lying near Lincoln had been wholly unimproved, and their desolate and naked appearance was an absolute disgrace to the Capital city. He also spoke of the duty of the state toward redeeming the sand wastes of the North, where worthless land could soon be transformed into fine parks and sanitariums, as that is one of the healthiest regions in the West. He emphasized the fact that Nebraska was a great and rich state, but it seemed very hard for our legislators to break away from the early grasshopper conditions and realize that they have something more to do than simply guard the state treasury. The former secretary, L. D. Stilson, being very low with a probably fatal disease, L. B. Craig was chosen to take

his place as secretary. The other officers were re-elected.

LIST OF PATENTS.

Issued January 7, 1908.

- 875,690. Check Row Planter. Christopher C. Butcher, Urbana, Mo., assignor of one-third to Edward L. Russell, Urbana, Mo.

- 876,665. Lawn Mower. Earl M. Stapleton, Cedar Vale, Kans.
- 876,697. Lawn Mower Grass Receptacle. David G. Davis, Ellensburg, Wash., assignor of one-half to George R. Bradshaw, Ellensburg, Wash.

HORTICULTURE STUDY AT WELLESLEY.

Our illustrations show the new greenhouses for laboratory work, at Wellesley College, Mass., completed last October by the Lord & Burnham Company, at a cost of several thou-

sand dollars. The greenhouse is a wing of the "Botany annex," a building well adapted and primarily intended for the gardening course which many of the young ladies are taking,

under the direction of H. S. Adams. With the opening of the spring the exterior wall will be hidden by a planting of *Ampelopsis Veitchii* and hardy ferns.

"SCALECIDE"

HAS MADE SPRAYING EASY THEN WHY NEGLECT YOUR TREES?

The N. Y. Herald, November 17, '07, says: "The chances are about a hundred to one that you have the San Jose Scale on your place and do not know it," and advises the use of "SCALECIDE." This is good advice. "SCALECIDE" has been tested and tried, and found thoroughly effective. The same yesterday, to-day, and all the time. One gallon makes 15 to 20, ready to use, by simply adding water.

Prices: 1 gal., \$1.00; 5 gal., \$3.25; 10 gal., 6.00; 50 gal. bbl., \$25.00, F. O. B. our factory. Order to-day. Write for booklet W and free sample.

"HORICUM" "SOLD BY THE SEEDSMEN"
 TRADE MARK
"HORICUM"
KILLS SAN JOSE SCALE
 Directions for Use.
 This preparation is Lime, Sulphur and Salt, making a concentrated Poly-sulphide of Calcium. The Salt adds to the adhesive properties, but the destructiveness to Scale Life lies in the Calcium Sulphide. Aside from its ability to destroy San Jose Scale, Horicum is a Fungicide, preventing the free development of fungid troubles.
 Shake package thoroughly or take the top off. The color in its concentrated form is a deep bronze green. Do not pour off the clear liquor only, stir the Horicum from the bottom of the package, add 20 parts of water (hot, if you can get it) for ordinary use. For a stronger dilution when the growth is all dormant, use 10 parts of water only (hot, if you have it) and spray thoroughly. By grading your dilution you make it any desired strength. Specific gravity, 1.56. Total Poly-sulphides, 30% by weight. Send for pamphlets to

Here is another instance where the U-Bar house won out, simply because it was the U-Bar. Competition was perhaps as keen as we have yet experienced. We were given the contract simply because the U-Bar construction has certain unmatched points, all of which go toward producing better plants and more blooms than possible with any other construction. But the U-Bar house does not stop there, it is the most enduring. Every structural detail and possible decay point have been carefully taken care of. If it is not convenient for you to see a U-Bar house then send for the catalog. **Pierson U-Bar Company**, Designers and Builders *U-Bar Greenhouses*, Metropolitan Building, 4th Avenue and 23rd Street, New York.

We have unsold at the present time the following varieties—all field grown plants, grown in our nurseries at Rochester, N. Y.:

- | | |
|---------------------|-----------------------|
| Anne de Diesbach | Prince Camille |
| Cllo | Elch Brunner |
| Frau Karl Druschki | Crimson Rambler |
| General Jacqueminot | White Rambler |
| John Hopper | Yellow Rambler |
| Mme. G. Luze | Philadelphia Rambler |
| Marshall P. Wilder | Common Sweet Briar |
| Mrs. John Luling | Mme. G. Brant |
| Paul Neyron | Wichuriana (The Type) |

These plants are in our storage cellars and can be shipped at any time. Prices on request.

NEW **My Maryland** ROSE

Best up-to-date commercial rose; read what others have to say about it.

Among the many new roses of the year there is none which has impressed us more as being worthy of a thorough trial. It has been exhibited only as 294, being a seedling raised by John Cook of Baltimore. A beautiful rose with an exquisite fragrance; in color it may be described as a soft salmon pink which brightens up beautifully as the bud opens. We are intending to plant this rose in quantity.

A. N. PIERSON, Cromwell, Conn.

In reply to your inquiry what we think of your new rose, My Maryland, we would say that after seeing others we still believe that you have the best new rose of modern times.

GUDE BROS., Washington, D. C.

Price 2 and 2½ inch pots, \$25 per 100 ; \$200 per 1000. Price 3 inch pots, \$5 per dozen.

THE BOSTON VIOLET

The people today are looking for New Violets just as much as they are for new roses or carnations.

THE BOSTON VIOLET

For the past two years has been placed before the most sceptical buyers in America and they prefer it to any other.

THERE'S A REASON

The Boston Violet is the largest, the most fragrant, it has a very pleasing color, and it is a great keeper.

THE BOSTON VIOLET

Is a variety that is early grown, it is the strongest grower and is in crop from September to May.

THE BOSTON VIOLET

Was awarded a First Class Certificate of Merit by the Massachusetts Horticultural Society and a Report of Superior Merit by the Gardeners' and Florists' Club of Boston.

Distribution will Commence in April. Order Now.

PRICES — \$2 per 12 ; \$12 per 100 ; \$100 per 1000.

WILLIAM SIM, : : CLIFTONDALE, MASS.

Ruffled Gladioli

About a dozen years ago I began selections with a view to crossing in the hope of producing a frilled or ruffled gladiolus as beautifully formed as an azalea. I got the clue from observing in some gladioli a tendency to vary some from the regular smooth petals. After many matings and failures I was at last rewarded about five years ago by the desired results. The first flower to show was an ideal cream in color with tint of blush and a strikingly marked red feather on three lower petals. This flower is very massive, over 13-4 inches in diameter and an extra strong grower. From bottom of first blossom to tip of spike it measures 22 inches and over. The foliage is large. The variety shown in the illustration is white, somewhat smaller in size of flower than the cream colored sort above mentioned. There are several shades of pink and yellow, also purple, represented in the varieties now in process of development all beautifully ruffled and four generations of seedlings are rapidly coming on. Competent florists and seedsmen who have seen the plant in bloom pronounce it the most marvelous and striking gladiolus yet produced and the beginning of what will probably be the finest race of gladioli. There will probably be a few cut blooms shown at next year's Society of American Florists' Convention.

British Horticulture

THE NEW SWEET PEA ANNUAL

The fourth "annual" of the National Sweet Pea Society excels all previous issues in the variety and value of the matter presented. The book should be popular on both sides of the Atlantic for it is of a cosmopolitan character. An extract is given from Mr. Lester C. Morse's introduction to "Field notes on sweet peas," issued in San Francisco. "Mr. Burpee's Impressions" is the title of an interesting article from the pen of Mr. W. Atlee Burpee, who records some incidents of his last year's European tour. Referring to the activities of the National Sweet Pea Society Mr. Burpee writes: "There is a line of work that your Society has undertaken which I regard as most important, and which must be conducted with careful judgment. It is the prevention of the multiplicity of names of identical varieties. The Spencer type breaks so constantly that, of course, the same sports will be found in many different places. Personally I should much prefer that instead of giving new names to these Spencers we should give the name of the variety with which they are identical in color and add the word Spencer." The Society's annual report which has been circulated with the "annual" has the following paragraph: "One of the most pleasing and interesting features of the sweet pea year was the visit of Mr. W. Atlee Burpee, of Philadelphia, with his wife and family. Mr. Burpee visited most of the leading sweet pea growers in the United Kingdom; he was keenly interested in the splendid London show, which surprised him, and he was impressed by the extent and importance of the Society's trials. At the dinner given to the judges and officials at the conclusion of the show Mr. Burpee presided, filling the chair in the happiest possible manner, by his graciousness, bonhomie, and generosity. Mr. Burpee has presented the Society with a fine 15 guinea challenge cup for competition at the next show.

MUSHROOMS BY THE TON

Recently I paid a visit to the establishment of Mr. R. E. Addey, of Brentford, who is one of the leading mushroom growers and spawn makers. Although it was in the depth of winter, there were several houses in bearing, the total output being from a ton to 30 cwts. a week. As mushrooms make from 9 d. to 10 d. a pound on the market, it can readily be seen that this branch of commercial horticulture is a very profitable one, especially when conducted on the up-to-date lines adopted by Mr. Addey.

THE POMPONE CACTUS DAHLIA

At the autumn shows several nursery firms showed peony-flowered dahlias. These are simply open or pollen-centred specimens of the older sorts which have for many years been discarded by the English growers, but have been revived on the Continent. An English firm of dahlia growers is making a specialty of the pompone cactus section. From early August the plants were a blaze of bloom, and although one or two sorts soon failed to produce blooms full in the centre, there were several which continued to flower abundantly, yet remained good. These included Mignon, a lovely little pink-flowered cactus, Nain (deep chestnut color), Coronation (crimson), and Peace (white).

W. H. Adsett.

The nomenclature of carnation sports—On the whole, we think the Carnation Society followed the wisest course in deciding against the advice of the nomenclature committee to give distinctive names to all sports without reference to the parent variety. One advantage which a sport carries with it is that, in the majority of cases,

its cultural requirements do not differ from those of the parent and that those growers who have grown the latter successfully can undertake the cultivation of the sport with greater confidence as to results than would be the case with a seedling. This point was not brought out in the discussion but it is an important one in that the retention of the name of the parent in the title by which the sport is known conveys directly to the purchaser this very useful knowledge as to its characteristics.

Again the charter—We understand that plans are being made to ask the Secretary of State, on behalf of the Society of American Florists and Ornamental Horticulturists, to extend an invitation to foreign exhibitors to participate in the National Flower Show at Chicago next November. Holding, as it does, a National Charter "for the development and advancement of floriculture and horticulture in all their branches, to increase and diffuse the knowledge thereof, and for kindred purposes in the interest of floriculture and horticulture" this organization can with the utmost propriety ask for this co-operation on the part of the National Government and favorable action on the part of the latter may reasonably be expected. That scolding query "What good is the charter" bids fair to be again answered in a most practical manner.

Essentials in hybridization—The best lesson to be learned from the plant-breeding discussions of the past week at Washington is the fundamental one that brains must be freely drawn upon if any success is to be expected in the production of new things. Indiscriminate guesswork is practically useless in hybridization. An intelligent purpose, intelligently followed, through methods intelligently chosen, is the only road worth traveling. And the paramount quality which must be retained and reinforced in every operation is stamina. Physique must stand first, for, if it is sacrificed in the least degree, eventual failure is a certainty. The history of plant hybridizing is strewn with the defunct relics of productions, beautiful and promising in every other respect, but deficient in this one essential. The weakling is doomed from the start.

A rose grower's duty—The next horticultural meeting of a national character will be that of the American Rose Society at Chicago, seven weeks hence. Secretary Hammond's appeal for a more general support of this useful organization by the rose growers and rose dealers throughout the country should call forth a spontaneous and hearty response. If every man to whom the queen of flowers has brought a comfortable livelihood should now take membership in this organization established to further promote their interests the American Rose Society would have no reason henceforth for anxiety as to the wherewithal for prosecuting its work on a scale commensurate with its importance. It is not creditable to florists or nurserymen that this Society should suffer for lack of interest or lack of funds. Both of these should be accorded to it with that liberality so characteristic of the horticultural profession when once it awakes to a realization of its duty.

Past and Present Experience with The Fertilizing and Selecting of Mealy Bug in Vineries the Cyclamen

When we read in the horticultural books and papers of all the things necessary to be done in theinery before starting the vines, such as clearing all the loose bark from the vines, scraping and rubbing them to make sure there is not a mealy bug's egg left, cleaning out the end of the spurs, which is a favorite place for them to crawl into, washing them with various insecticides and painting them with lime, sulphur, whale oil soap, and various other insecticides, and painting all the wood, brick and stone work with kerosene oil, raking and cleaning all the loose soil so as to make sure there is not a mealy bug or one of their eggs left anywhere in the house, and then after having followed directions scrupulously, what is more discouraging, after all one's vigilance and labor, than to see on the berries just set, a mealy bug? Your heart fails, for how well you remember what a splendid house of grapes there was last year—large bunches well colored and with beautiful bloom on them—perfect so far as growing went—but every bunch spoiled with the mealy bugs.

Nearly every grape grower has had this experience and a great many are still having it. I had it for years until three years ago I made up my mind to try cyanic acid gas. Knowing it to be death to all animal and insect life I found out all I could about the best way and the right quantity to use in my house which is a three-quarter span, 50 feet long by 12 feet wide, 12 feet high. About the 10th of November, 1904, I used five pounds of water, five pounds of sulphuric and 3 pounds of cyanide. It burned the leaves that were left on the vines but did not hurt the vines. During 1905 I found only three mealy bugs. I did not do a thing to the vines in any way, only washed the glass and woodwork to clean it.

In November, 1905, I used 2 1/2 pounds of cyanide. During 1906 I found mealy bugs over where I had placed some plants. In November, 1906, I used three pounds as at first. Last year, 1907, we did not find a bug; the bunches and berries were larger and better than I have had in that house for years. Last November they had three pounds more. Since 1903 we have not cleaned the vines in any way whatever. I believe it is very injurious to vines to strip the bark from them; many buds are knocked off and some killed by too strong a wash.

By using the cyanic acid gas you kill every insect and egg, save lots of unnecessary labor and when the grapes are ripe it is such a pleasure to cut them and have them put on the table in perfect condition.

James Wheeler

We read with interest in last week's HORTICULTURE Mr. Brown's article on the cyclamens at Sandringham. We are certain the illustration does not do them half justice. Did anyone ever see a photograph of cyclamens that did them anything like justice? We would have wished, however, that Mr. Brown had gone a little more into detail regarding the method of fertilizing at Sandringham, which he says was most interesting and worthy of emulation by growers here.

The illustration shows a house of mixed colors. We would like to learn if the fertilizing was done in a house of mixed colors, or are there several houses devoted to cyclamens at Sandringham, and the colors kept separate for fertilizing?

It has been our experience in fertilizing cyclamens in a house of all colors, open to the influence of insects, that in a few years the colors seemed to all get mixed—more especially so with the pinks and reds. The same result as to color came from selection of seed from good flowers; the size of the flower, foliage and stem might be retained and a little improved but not so the color.

We have always been able to procure a good strain from a reliable source although there are many poor strains on the market, and we are still of the opinion that good culture helps greatly in bringing out the rich qualities of a strain of cyclamens. So finally we gave up the fertilizing and selecting, believing there were no permanent results gained, working as we had to do on a limited scale.

James Stuart

Mamaroneck, N. Y.

Hippophae Rhamnoides, Linn

Now that attractive winter fruit is so generally recognized to be a valuable asset of an ornamental shrub it may be well to call attention to the Sea Buckthorn, a plant native to Europe and Asia. Normally it is a large shrub eight to ten feet in height, although occasionally it becomes a low tree with a height of twenty feet. Not infrequently it is somewhat straggling in habit and seldom is it really symmetrical. Its branches are numerous and irregular. The foliage is willow-like and of a silvery gray color. The flowers which appear in May are small, yellowish and of little worth. However, this is not true of the fruit which follows. This is berry-like and borne in the greatest profusion by the female plant. It ripens in late September or early October and retains its showy orange color until mid winter or even until early spring. As the plants are dioecious it is essential to have male plants near. Although rather naturally a seaside plant thriving in sandy soil and exposed situations, it does admirably inland unless the soil be very clayey. It increases by suckers and occasionally may become somewhat troublesome. Otherwise it is easily grown and managed.

Hippophae rhamnoides is figured and described in "The Garden" for Feb. 27, 1904.

Daniel A. Clarke.

AFTER ADJOURNMENT.

What is it? "Hydrangea Arborescens Alba Grandiflora" figured in Good & Reese's catalogue with cordate foliage and broad, nattered corymbs of flower, while in Dingee & Conard's catalogue we find "Hydrangea Arborescens Var. Sterilis" bearing oblong ovate leaves and conical panicles of bloom! Confusion again and no "Registrar" to cause!

That was a very nice compliment which President Roosevelt paid the Carnation Society on the occasion of their visit to the White House when he congratulated the members on having brought their ladies. Each visitor wore a carnation and the contrast between the appearance of this body and that of another organization, which at the time was standing in line, carnationless and ladyless, for a reception arranged to follow after the Carnation Society, was quite marked.

An anonymous correspondent is one of the most contemptible creatures which the world has ever produced. Outside of the prisoner, he adopts the most cowardly way of attacking people.

He does not give any one a fair chance to defend himself, but remains hidden in the recesses of obscurity to protect his own reputation. Such a sneak may even call to see the person whom he has defamed, appear friendly and at the same time study the effect of his wickedness upon his unsuspecting victim.

No matter how one may view the work of an anonymous communicator he must come to the conclusion that a devil seems more like a saint than such a fellow, and he can readily imagine that old Beelzebub would not allow a nameless letter writer to enter hell for fear of making the infernal abode worse. N. Y. Evening Telegram Correspondent.

In the words of Jethro Bass: "Hain't underdone it, and hain't overdone it a mite, hev you? Callate you couldn't hev beat that if you was to take a week to it."

John Cook's red rose Cardinal is a favorite with Poehlmann Bros., Chicago. Now that its merits have been discovered by this wideawake firm, no doubt this fine American rose will find admirers a-plenty. Another of Mr. Cook's roses, the pink Enchanter, is held by Gude Bros. of Washington to be in the very front row.

At present writing, the daily reporters' pets, the suburbanite with the dandelion blossoms and the lady with the pansy from the back yard, have subsided, and the outside thermometer with frozen bulb looks wistfully through the glass at his comfortable brother inside the greenhouse. Even in ideal Minneapolis, two weeks ago, they were boasting of the tulips blooming amid summer zephyrs and "the bees a-humming soft and lazy, January are you crazy," etc. Better to stick to the greenhouse man in the long run, when it comes to getting flowers in mid-winter, Mr. Reporter.

Speaking of carnations, which do you find is best appreciated by the average flower buyer with moderate purse—a good bloom of an obscure or nameless variety, or a poor bloom of the most handed pet of the exhibition, at same price?

Mr. Ward's avowed present aim in carnation improvement to purify and

NATIONAL SOLDIERS' HOME, TOGUS, ME.

Happening in the vicinity of Togus the other day, I decided to call on my friend Mr. A. W. McIntosh, chief of the Horticultural Department, and also get a look at the holiday decorations. These were more elaborate than anything of the kind in the history of the home, and attracted crowds of visitors. The Governor's quarters, chapel, various mess rooms and hospital all had their share of attention. The chapel was simply but tastefully trimmed with evergreen wreathing, holly and poinsettias, and with handsome memorial wreaths in each window. The hospital dining room was more pretentiously dressed, and a large Christmas bell hung in the centre of the hall imparted a seasonable suggestion to the work. The "piece de resistance, however, was the large mess hall, in which 2500 men are fed three times a day. Each of the 60 columns, 19 ft. in height, supporting the ceiling, had been closely twined with roping, and in addition a specimen spruce tree six feet high and surmounted by an American flag was attached to the front of each of the ten columns on either side of the main aisle. Christmas bells were suspended at intervals above this aisle, and, at the further end, the national colors were draped against the wall, crowned with a 49-inch star illuminated by electricity. Directly in front of the flag stood a magnificent fir tree, twelve feet high, and covered from top to bottom with red, white and blue electric lights, and poinsettias. The ceiling was a perfect maze of loops and festoons of evergreen, the

intensity color tones so that they may be more brilliant, delicate or pleasing to the eye, will be generally accepted as the work on right lines. If it be true as regards the carnation how much more does it apply to the chrysanthemum? Most critics will agree

walls scrolled with wild smilax and the doors and windows all beautifully outlined. I noted that leucothoe sprays were used largely in this part of the work. The windows were further dressed with wreaths of evergreen and holly, and each of the forty large dining tables was arranged with dracenas and stevias, the latter being the best specimens for the purpose the writer has ever seen. All the decorations were carefully planned by Mr. McIntosh weeks ahead, and every detail carried out under his personal supervision; over 3000 yards of roping were used, all made by inmates of the home and employed in the green houses.

A walk through the houses showed everything up to date, and no waste room. There is promise of abundant bedding stock for 1908, except alternanthera, which Mr. McIntosh regards as unsuited to present conditions at Togus. Thousands of tulips, hyacinths and other forcing stock are in their various stages. A house of roses, seventy days planted from 2-in. pots, look like six months, a fine lot of tomatoes were well along to maturity, and a batch of string beans in 6-in. pots looked good enough to eat. Should it be acceptable to you, I may later on give your readers some further items regarding what has been accomplished for the improvement of the grounds, since Mr. McIntosh took charge last April, and also something of what is projected for the future development of this beautiful government reservation.

CAMPBELL WALKER.

Kennebunk, Me.

The above interesting letter should have appeared at holiday time but was crowded out for the time being. Ed.)

that size and form may safely be left at their present stage for a time, while the chrysanthemum experts devote their energies and ingenuity to the task of purifying and brightening up the prevalent colors in the queen of autumn.

AMERICAN CARNATION SOCIETY.

The Convention Story Concluded.

On Wednesday evening after the reading of S. S. Skidelsky's paper on what the grower should expect from the introducer of a new seedling, Fred Burki took the floor and contributed some pertinent views on this subject. He claimed that because of the different conditions of soil and environment which a variety must meet after leaving the introducer, the latter could not be fairly held responsible for the behavior of a variety after dissemination. F. R. Pierson argued that honesty and a candid understanding between disseminator and buyer is at all times the best policy. He took the ground that medium-sized varieties are entitled to more attention than has been accorded them by the Society. He favored indoor culture and asserted that the buyer of a novelty should be willing to assume some responsibility.

W. N. Rudd, who was scheduled to say something on what the introducer should expect from the growers, advanced the opinion that the introducer of a novelty is lucky if allowed to live. "If the buyer will pay his bill, that's all we ask of him." Fair dealing, he said, should be the basis of all transactions. The introducer has a right to expect that the buyer will treat the cuttings right. The introducer should be given credit for honesty, and not be compelled to prove himself not guilty. There are very few instances, he said, where a man has started out with a purpose to swindle in the introduction of new carnations, and charity should be exercised in all cases of dissatisfaction. F. R. Pierson followed, referring to the great work which the introducers have accomplished and the lack of appreciation. The habit of unfavorable reflection upon the introducer and implied censure of his honesty was not justified by the facts.

The previous announcement that the flowers on exhibition would be distributed to the public on Wednesday evening brought a large and expectant crowd, mainly ladies, to the hall, and when the signal was given it did not take long to divest the tables of every vestige of the great carnation show. The fun-maker could not resist the temptation which the situation afforded, and announcement was gravely made from one of the tables that potted plants would now be given away in the upper hall. A wild stampede up the stairs to the hall where the Carnation Society's meeting was in progress followed, and the resultant confusion on the one side and hilarity on the other filled the fun-makers' hearts with comfort and joy.

The Banquet.

The banquet given by the Florists' Club of Washington on Thursday evening, January 30, to the American Carnation Society and ladies was, as briefly mentioned in our issue of last week, an occasion long to be remem-

bered. After President Bisset had voiced the welcome of the local club to the visitors, the first toast, "Our Country and President," was responded to by Hon. Wm. E. Andrews, Auditor U. S. Treasury. He applauded the presence of handsome women and beautiful flowers and followed with a speech overflowing with patriotism, flag and country. It was a stirring address and evoked enthusiastic applause.

The next toast, "The American Carnation Society," was responded to by President Fred. Lemon. He said that the subject was one close to his heart. He referred pleasantly to the international character of the membership and to the beneficent work being accomplished by the society. He closed with a good word for his successor and the place of meeting for next year. President-elect Patten, who followed, was given a rousing reception and made an elegant little speech. J. H. Dunlop, on behalf of the Canadians present, also spoke appreciatively and was accorded great applause.

The next toast, "Washington, Our Capital," was assigned to Hon. Robert N. Harper, President of the Washington Chamber of Commerce. Mr. Harper kept his audience in glee with anecdotes and claimed that Washington is destined to take a leading place in the commercial world as it has already done in other respects. He enlarged upon its agricultural, manufacturing and transportation facilities and magnificent opportunities for trade development, and recalled the fact that in the recent financial disturbances it was undisturbed. Professor Taylor then contributed some capital recitations, receiving several recalls.

Prof. David G. Fairchild next responded for the Agricultural Department. He told of some of the work accomplished and forecast the plans of the future. With an army of over 9000 employes—young men full of enthusiasm and vigor—it is working out ideas for the benefit of the horticultural profession and the American people.

"Horticulture" was the toast assigned to Robert Craig. He made kindly reference to the journal published under that name, the selection of which title he characterized as reaching the very highest apex. With characteristic eloquence he then spoke of the glories of the Garden of Eden, of horticulture as the greatest of all arts, which is keeping pace with the progress of the world on all lines. He paid a fine tribute to the "Grand Old Man of Horticulture," who has presided over the Botanic Garden with such skill for so many years, the value of whose work we can hardly realize. He also referred to the enthusiasm and the splendid record of the American

Carnation Society in its twenty years' existence.

"The Horticultural Press" was the next toast and Wm. J. Stewart responded. He spoke of the birth and growth of this most important ally of the horticultural profession within the past quarter of a century and presented its claims for the support and affections of everyone making horticulture his life work. There is no agency so indispensable today and none that gives so much return for so small a cost. On behalf of the New England members of the Carnation Society he expressed the happiness all felt in contemplation of the fact that New England had been honored by the selection of one of her sons, one whom everybody loved and who was well worthy to be the standard bearer of the Society for the coming year.

Wm. F. Gude then responded to the toast "Our Guests." His speech was full of genial cordiality and well-expressed the hospitable feelings of the Washington brethren.

"The Ladies," the last toast on the program, was ably handled by C. W. Ward after the toastmaster had given a most poetic introduction. Mr. Ward enlarged upon the charms of beautiful character, which far outshone physical attractiveness, and proved himself an eloquent exponent of this ever-delightful theme.

The closing exercises included the presentation of the cups, medals and other trophies of the exhibition to the fortunate winners.

NEW ENGLAND CONFERENCE ON RURAL PROGRESS.

The second annual New England Conference on Rural Progress will be held in Boston, at the office of the Secretary of the State Board of Agriculture, on Friday, March 5, 1908. The success of the meeting of last year seems to have demonstrated the value of this conference. It is hoped that representatives of all the important rural associations in New England will send delegates.

The general subject of the conference will be "The Teaching of Agriculture in the Public Schools." This is a most opportune theme and will be treated by experts who will take up a thorough discussion of elementary agriculture as a subject of study in the grades, the place of secondary agriculture in the public high school, separate schools of agriculture and federal aid to the teaching of agriculture.

KENYON L. BUTTERFIELD.

Amherst, Mass.

Enclosed find \$1.00 for which please send me HORTICULTURE for one year as it is just what I have been looking for and fills the bill.

Morristown, N. J., Jan. 2, 1908.

NEWS OF THE CLUBS AND SOCIETIES.

ALABAMA STATE HORTICULTURAL SOCIETY.

The fifth annual meeting will be held at Birmingham, Alabama, Thursday and Friday, February 13 and 14, 1908, at the rooms of the Commercial Club. All persons interested in horticulture are cordially invited to attend. The program is as follows:

Opening exercises Thursday, 1:30 p. m.; Address by President W. F. Heikes, Huntsville; History of Fruit Growing in Alabama, Dr. P. J. Beckmans, Georgia; Montgomery Flower Growers' Association, Mrs. W. A. Gayle, Montgomery; Address by Prof. Samuel B. Green, President Minnesota Horticultural Society, St. Paul; School Improvement, Mrs. L. H. Craighead, Mobile; Improving our Country Homes, Dr. W. S. McCain, Livingston; Relation of Horticulture to the Schools of the State, Prof. S. L. Chestnut, Montevallo; How to Reduce the Fertilizer Bill: Some Truths about Seeds, Mr. C. B. McVay, Birmingham; Address by Hon. J. A. Wilkinson, Montgomery; Results and Significance of the Plant Disease Survey in Alabama, Dr. E. Mead Wilcox, Auburn; Laboratory Methods of Studying Plant Diseases, Prof. Stone, Auburn; Cowpeas, Prof. J. O. Sargent, Hamilton; How to Set Out a Young Orchard, Prof. E. F. Candern, Wetumpka; Fertilizers, Mr. C. H. Billingsley, Montgomery; Fruit Growing in the South, Mr. D. C. Turnipseed, Flora; Notes, Mr. Herbert Chase, Huntsville; Fruit Insects, Dr. W. E. Hinds, Auburn; Notes on Fruit Growing in the West, Mr. M. C. Scott, Montgomery; Fruit Soils, Prof. W. C. Smith, Montgomery; Forestry, Hon. J. B. Powell, Montgomery; Best Way to Sell Trees, Mr. A. G. Long, Andalusia; Cantaloupe Culture, Mr. H. L. Trott, Montgomery; Our Work at Lapine, Mr. C. W. Landers, Home Fruit Growing, Mr. J. A. Kermode, Camp Hill; Notes, Prof. R. S. Mackintosh, Auburn; Report of Committees; Business; Reports of Vice-Presidents.

Program will probably not be followed as given above.

NATIONAL COUNCIL OF HORTICULTURE.

A meeting of the National Council of Horticulture was held at the Auditorium Annex, Chicago, on January 22. Prof. R. S. Mackintosh, Auburn, Ala.; W. T. Macom, Ottawa; Prof. E. J. Wickson, Berkeley, Cal., were elected delegates. Plans for the Press Bureau service included the use of sixty-eight articles for a period of seventeen weeks, an expenditure of \$75 for the preparation of fifty articles to be sent to about 500 newspapers and syndicates. The secretary reported \$114.28 on hand with a promise of \$550 from interested societies. Letters were read from L. Horace McFarland suggesting an effort to encourage improvement of planting conditions about country schools, and L. W. Fitch, secretary of the Wisconsin Cranberry Growers' Association, suggesting articles on cranberries as an article of diet. The secretary was instructed to offer to use four such articles at an approximate cost of \$25.

TARRYTOWN HORTICULTURAL SOCIETY.

The Tarrytown Horticultural Society held its regular monthly meeting in Good Templars' Hall, Friday evening, Jan. 31st, 1908, Vice-President Angus in the chair and a large attendance of members. Several communications were read from friends regretting their inability to be present at our last dinner; and an invitation was also read from the New Jersey Floricultural Society to attend their annual Smoker on Feb. 7th, 1908.

As it was carnation night and as Treasurer J. T. Lawrie had offered a prize for the best 18 blooms of three varieties, six of each, a very fine display of flowers was in evidence. First prize was awarded to Samuel Untermyer (Gard. W. H. Waite), Yonkers, N. Y., for Winsor, Enchantress and White Enchantress. Second prize was awarded to Geo. Legg (Gard. J. Elliott), Tarrytown, N. Y., for White Enchantress, Miss H. M. Gould and Mrs. M. A. Patten.

F. R. Pierson Co. had for display only, a very fine lot which was awarded honorable mention; the varieties were White Perfection, Red Chief, Victory, Melody, Beacon, Winsor, Rose Pink, Enchantress, White Enchantress, Var. Lawson and Mrs. M. A. Patten. Honorable mention went to Scott Bros., Elmsford Nursery, for ten vases of Beacon and Miss H. M. Gould. A cultural certificate was also awarded to Mr. Waite for a very finely grown vase of May's Giant Mignonette. Quite a lengthy discussion followed on carnation culture, viz., cutting, method of striking, temperature, growing ready for the field and indoor culture, and all listened with pleasure to the interesting remarks of F. R. Pierson, Wm. Scott, D. McFarlane and John Woodcock. The most entertaining feature of the evening was the brief account of visits by F. R. Pierson to several growers in different parts of the country, also his attendance on the convention of the American Carnation Society at Washington, its great exhibition, great banquet and reception.

LOUIS A. MARTIN,
Cor. Sec'y.

NORTH SHORE HORTICULTURAL SOCIETY.

The ninth annual banquet of this prosperous society was held at Manchester, Mass., on Wednesday evening, January 29, and is recorded as one of the most successful in the society's history, from every point of view. The tables were handsomely decorated with flowers and the walls screened with pine and laurel. A fine group of palms screened the orchestra on the stage. Two hundred and nineteen guests were present, including several from Boston. President Till acted as toastmaster. Among the speakers were D. I. Bingham, 95 years old; Rev. W. F. Powers, J. K. M. L. Farquhar, J. W. Duncan, Rev. L. H. Ruge and E. H. Brewster.

FLORIST CLUB OF PHILADELPHIA.

Carnations, sweet peas, and Queen Beatrice roses divided honors with E. A. Harvey at the monthly meeting held the 11th inst. Mr. Harvey proved an ideal essayist, giving his views in practical, commonsense form and with admirable and commendable brevity. This is Mr. Harvey's first appearance here and the fact of his having already acquired the rare and radiant secret of how to boil it down enshrines him to the thirty-third degree in the hearts of a hustling, get-there community. Along with his talk Mr. Harvey gave concrete evidence of his ability as a carnation grower by exhibiting nine vases of magnificent blooms, among them being Aristocrat, White Perfection, Victory, Winsor, Lawson, Robert Craig and Enchantress. He also exhibited a new white seedling carnation, raised by E. C. Marshall of Kennett Square, and a vase of the new pink forcing sweet pea, Mrs. William Sim. The latter is a strong grower of pleasing light pink, a shade brighter than Daybreak carnation. It has fine long stems and is about two weeks later than the well-known Pink Christmas variety. The Strafford Flower Farms sent a fine lot of Enchantress, Beacon, Lady Bountiful and Winsor. Also a vase of a new carnation from Guernsey, England, Mrs. W. H. Burnett, a light pink, finely formed, good substance, a little under-sized but thought by Mr. Stroud to be valuable as a spring and summer variety. Joseph Beacock exhibited new pink seedling No. 100, fresh from its blushing honors at Washington. A grand vase of Queen Beatrice came from F. H. Kramer. We have never seen better flowers of this beautiful variety. Samuel Batchelor staged White Enchantress, Lady Bountiful and a new pink sport from Lawson. Also two pots of white cyclamen with very large flowers of the grandiflorum type and showing high culture. The Henry A. Dreer nurseries exhibited Clematis indivisa which was quite a revelation to many. It was stated that it had proved very useful as a florist's decorative plant, the sprays being freely produced during February, March and April. One florist who bought two plants found it so good the first year that he followed up with an order for fifty the next season. This variety is a native of New Zealand and is but little known here, although introduced in 1847, being only half hardy. Thrives well in about the temperature of an ordinary carnation house. Closely allied to C. montana, flowers white, and 1 1/2 inches in diameter, produced in large clusters like C. paniculata, leaves evergreen.

SECRETARIES FOR 1908.

The New Jersey Horticultural Society; H. G. Taylor of Riverton.

The Forest Grove Horticultural Society, Oregon; Harry Paynes, Forest Grove.

North Dakota Horticultural Society; Prof. Thompson, Bottineau.

WHAT THE GROWER SHOULD EXPECT FROM THE INTRODUCER OF A NEW SEEDLING.

By S. S. Skidelsky; read before the Carnation Society at Washington.

It would be hard to find in the history of floriculture another instance of the rapid strides and development of a flower to equal that of the carnation.

The divine flower has indeed sprung into favor as if by magic wand. Unlike the short-lived chrysanthemum or the queen herself—the rose—the carnation is pre-eminently the flower of the masses. It is grown everywhere, it is sold everywhere, the "curb merchant" no less than the society florist handling it in immense quantities. More glass is going up, more carnations are being grown, and the demand continually is for still more. Nor is its popularity confined to our own borders. England, Germany and France depend upon our varieties; far-away Norway and Sweden grow them with success; and even darkest Russia, we are told, can do Lawson, Enchantress and White Perfection well. Let us hope—and you will pardon my slight digression from the subject—that with the advent of Beacon there may come a light to brighten the hovels of the semi-civilized, wretched peasantry in the Czar's domain.

A Prediction Verified.

When John Thorpe, but a comparatively short time ago, predicted that our puny carnation of yesterday would attain the respectable size, by actual measurement of four inches in diameter, there are many among us today who were inclined at the time to treat such prophecy with a four-inch grain of salt. That prediction of Mr. Thorpe's has come true, nevertheless. We have practically reached the goal of our ambition. The four-inch carnation is here, and has evidently come to stay. Nor are we content to rest upon the laurels achieved. We are aiming higher and still higher. What was good enough a season or two ago, does not satisfy us today. We must have something better. It won't do to stay the march of progress or to check the course of evolution. Aside from the size of the bloom itself, we must have also stem—a long and stiff one at that. We must have a carnation with a non-bursting calyx, of good color, good keeping qualities, and last but by no means the least, we insist on varieties that will produce the flowers and yield us dollars and cents—"bread and butter" carnations, if I may borrow the stereotyped description, now and then applied to seedlings which do not pay for the bread, let alone the butter.

It is not my intention, however, to point out any particular varieties, nor do I wish to call to the bar of the grower's opinion any of the introducers of the "bread and butter" sorts, the kinds that never paid for either the bread or the butter.

The Origin of "Worthless Varieties."

I am rather inclined to the belief that the average introducer of a new seedling is honest and honorable; that

he means well; that his sole aim and object in introducing a carnation is to give satisfaction; that under all circumstances he aims to give the grower his money's worth. There have been some exceptions, of course, but this is another story, having no bearing upon the subject under consideration. Granted then that no fraud or deception on the part of the introducer is ever intended, the question arises, Why are worthless varieties thrown upon the market? Why indeed?

I shall attempt to answer this question, as I have studied it at close range, depending upon my personal impressions and observations, which, of course, are in no wise infallible. My observations upon numerous occasions lead me to the conclusion that there are some hybridisers who are inclined to be too optimistic, often being carried away, so to speak, by the momentum of their own enthusiasm. The man thus inclined makes his cross, selecting for the purpose sturdy and meritorious parents. The result, he takes it for granted, must be highly satisfactory. I say "he takes it for granted" advisedly, because taking things for granted is a characteristic trait of the enthusiast. He watches the seed pod with all the care, hope and love which a young mother bestows upon her first born. To be sure, he reasons, something good must result. A chip of the old block is an asset not to be despised. In course of time the seedling or seedlings appear. Out of a dozen or more "uncertainties" the one looking the most promising is selected and duly labeled. No sooner does the bloom break through the calyx than the plant is chopped down, literally hocked to pieces, in order to get all the cuttings, good, bad and indifferent, that it may yield through and beyond the season. The vitality of the "promising one" is thus impaired at the very outset of its ephemeral career. The season following it still looks promising, although the calyx is somewhat inclined to go asunder, nor is the stem strong enough to sustain the weight of the bloom or the bunch of petals. The season, of course, which happened to be either too dry or too wet, is accountable for that. Perhaps a little overfeeding did the mischief; maybe a degree or two below or above the temperature required to suit its delicate constitution. To be sure there are numerous reasons for its misbehavior, but no matter, where there is life there is hope. A second massacre is in order and the plants are propagated to the limit. Cuttings are taken regardless of their condition. It won't do to "put off" when the growers are so much in need of a good White, a good Red or a good Pink, and, incidentally, when there is a fortune in sight. I will stop right here, however, to reiterate my assertion that the introducers of new carnations are absolutely honest; that no fraud is intended when a carnation is finally launched with all the pomp and all the songs in its praise which we are accustomed to see and to hear.

Not How Many, But How Few.

The question what the grower should expect from the introducer of a new carnation is rather a perplexing one, and is not so easily answered as one might expect. Our ideas of the

fitness of things are so much at variance with local conditions and local requirements that it would be practically impossible to set up a standard with a view to insuring general satisfaction.

In one of the November issues of HORTICULTURE Mr. John Thorpe, in his notes on the Chicago flower show, has this to say about the carnations which were on exhibition there: "Of new carnations—in quantity very short, in quality never better. Raisers of seedlings are getting wise. It is not how many, but how few. Let this prevail, because the few have the best chance." Tersely expressed, but true. That the few of superior quality have the best chance is not to be denied. Yet, on the other hand, we must also not ignore the fact that while there are comparatively few growers ever in quest of "fancies" or carnations of quality, whose products are sure to command the highest prices at all times, there are hundreds and thousands of others who are ever on the lookout for "the bread and butter sorts," whose local markets, either wholesale or retail, do not warrant heavy investments in "fancies," who, in brief, must have carnations which, taking local conditions into consideration, will pay for the coal, the help, the interest on the greenhouse plant, and will leave a dollar to boot. It is the rank and file that is to be considered; the man who can no longer grow Lawson or Queen, who is in want of something to take their places. A standard, therefore, to suit alike the successful growers in the vicinity of New York or Chicago and the man in the Dakotas, is not to be thought of.

But what, after all, is the grower to expect from the introducer of new seedling carnations?

That Happy Middle Ground.

Coming to the point by the shortest possible route, it begins to dawn upon me that there ought to be a sort of happy middle ground, upon which both the grower and the hybridizer could meet for the purpose of advancing their mutual interests, for the purpose of adjusting differences, of overcoming prejudices and of facing conditions. If the one realizes the need of the other; in other words, if the introducer of seedling carnations will exercise the most scrupulous care in behalf of the "goose that lays the golden egg," and the grower in his turn will bear in mind that his very success or the "golden egg" has been made possible by the men who have made hybridization their life study, who are sacrificing their time and their means in order to improve upon past achievements and thereby advance the interests of the carnation growers,—if both, I say, could meet upon such ground, there surely would be no cause for disappointment or dissatisfaction. But how is this to be accomplished? Leaving the hybridizers' cause in the hands of Mr. Rudd, who, I am sure, will do ample justice to it, I will take up the growers' end of the question and will briefly outline his expectations from the introducers of new seedlings.

The Grower Expects His Money's Worth.

First. The grower expects his money's worth. By this I mean that

when he orders a batch of high-priced cuttings he expects and is fully entitled to high-grade stock cuttings that have been carefully selected and well rooted—rooted not by dirt of the steam pipe at so many thousands per week, but by the natural process of keeping the feet comfortably warm and the heads cool, to insure vigor and health.

Second, He expects from the variety just what it is represented to be. In other words, when a variety is a cropper, it should not be represented as a continuous bloomer, that when its calyx splits at certain seasons or under certain conditions, that fact should be brought to the surface regardless of losses or gains.

Third, He expects the benefit of the introducer's experience without paying an additional price, often a heavy one, for the experience himself. By this I mean, that when a seedling has been thoroughly tested and its requirements and peculiarities studied and recorded, the introducer is morally obliged to give the grower the benefit of his own knowledge and experience. The grower is entitled to such information and it should not be withheld from him. A printed slip, bearing all the cultural notes about the variety introduced, should accompany each and every shipment. And

Fourth, The grower expects a "square deal." By this I mean that no carnation, no matter what its previous record, no matter how many points it scored or how many medals were awarded it—unless it maintains its record in all the essentials up to the time and including the season of its dissemination, unless its vigor is in no wise impaired, should see the light of day. The introducer must be absolutely certain on this point, he must take nothing for granted, else the grower is sure to be a very much disappointed man.

No More "Gold Bricks."

The growers' expectations, it seems to me are within the bounds of reason and need hardly be dwelt upon at greater length here. Let a condition of a thorough understanding and most scrupulous honesty on both sides prevail and we will no longer hear about "gold bricks" and "suckers."

After all there is a deal of truth in the old saw of honesty being the best policy. The most successful business men of today are those who pursue such a policy, whether it be in the dissemination of seedlings or breadstuffs. The child that burns its fingers fears the fire, so does the grower steer clear of the man who sells him a winner and gives him a "gold brick" instead. It is to our own interests, whether we are hybridisers, dealers or mere agents, to discourage worthless varieties, stamp them out—root, branch and all—if we wish to see the most important branch of our business thrive and develop without hitch or hindrance.

Please find inclosed \$1.00 for a year's subscription to HORTICULTURE. I find HORTICULTURE a paper which I could not be without. Wishing you success, I remain

Yours respectfully,

HARRY DIETZ.

Indianapolis, Ind., Dec. 31, 1907.

SPECIAL POINTS ON CARNATION HYBRIDIZING.

Read before the Carnation Society at Washington, by R. Witterstaetter.

Mr. President, Ladies and Gentlemen: Some sixteen years ago, when I first undertook the work of hybridizing the carnation, I had very little knowledge of Nature's law regarding the results to be expected from crossing the standard commercial varieties of that date; and concluded that experiments with a complete record of the percentage and the results was necessary. As regards color, size, stem, form, habit, freedom, etc., I found while we had some very good seedlings that pointed up well in everything except color, and color being a very important factor in a commercial carnation, that we got quite a few variegated purples and off colors, and very few identical to the parent color. I, therefore, concluded that it must be Nature's law in plant life the same as in the human race, and first blood would tell and future breeding has been carried on with that point in view, namely, scarlets in a race by themselves, white in theirs; and so on, always selecting for future work that which came nearest to an ideal as to color and commercial value.

Some have held that by following this method you lose constitution. We have proven this, to our own satisfaction, to be untrue if a selecting of vigorous parents is made for the work. This opinion may have arisen from the fact that a very brilliant scarlet has no vigor to back it up, our most vigorous scarlets being only a fair or dull red; and if a good constitution and a brilliant color are combined, the result is apt to be a slow and shy bloomer, not up to the commercial requirements. As most of my endeavors have been devoted to the scarlet race—amounting to about one-third of the number of seedlings raised—I have taken the pessimistic view, that it would be an impossibility to produce a brilliant scarlet of free blooming quality, backed up by a vigorous constitution. Of late years, however, I have observed that this will not be an impossibility.

In breeding for form we have always selected those that have reproduced themselves in that point for two or three generations, from one or the other of its parents, preferably the seed parent, and using the same as a seed parent. In pink we do not hold so closely to the color line, but are very particular that whatever color is used be of good, clear, strong and lively tone, not subject to fading into dull colors, or easily affected by the sun.

In breeding for size, we do not hesitate to use a small flowered variety as to a seed parent, provided its progenitors of the first and second generations past were large flowered varieties; as a pollen parent likewise, if it has all the other attributes of a good commercial variety.

In breeding for stem and calyx, I like to select a variety that has inherited these good points from one or two generations past, with the bloom bordering on the semi-double, or not too many petals to insure a good setting of seeds; also guarding against parents with flowers containing too

Winsor and White Enchantress

**Strong Rooted Cuttings
Now Ready for Delivery**

WINSOR has proved to be the finest carnation in the light pink class. We sold a large quantity of it last year, but there will be a much larger sale for it this year. At the English Carnation Show held in December, it was the winner in the light pink class. It is doing well everywhere and will supplant everything in that color.

WHITE ENCHANTRESS will occupy the same position among white carnations that Enchantress does among flesh pinks. It has all the good qualities of the common Enchantress,—long stem, earliness, large size, freedom, etc. In our opinion, it is by far the best white carnation ever introduced.

We have a splendid stock of both Winsor and White Enchantress ready for immediate delivery, and will guarantee perfect satisfaction with the cuttings supplied. Do not wait, because the demand for these varieties is bound to be enormous. **Order early, while we can promise immediate delivery,** and secure gilt-edged stock. We have a large stock of both of these varieties, and all our cuttings are heel cuttings, taken from flowering stems. On account of the quantity that we are growing, we are not obliged to over-propagate, and our stock is in the most perfect and healthy condition.

Strong rooted cuttings from sand, \$6 per 100, \$50 per 1000. Extra strong transplanted cuttings from soil, \$7.50 per 100, \$60 per 1000. Strong established pot-grown plants \$9 per 100, \$75 per 1000.

SPECIAL POINTS ON CARNATION HYBRIDIZING.

many petals, as the result will be too many extremely double flowers with no calyx to speak of.

Constitution, next to color, is the most important factor of a commercial carnation, from a grower's point of view, and should be given the utmost consideration. The parents should be selected and bred to such varieties as are noted for their healthy and vigorous constitution. We believe in order to gain the best results, this crossing should be done during the months of March and April, when plants are making their most vigorous and rapid growth, insuring well developed and ripened seed.

We sometimes question whether the condition and class of food with which we supply the mother plant crossing, and up to the time of ripening the seeds, is not responsible to some extent for our failures or successes as the case may be.

Regarding any other points on hybridization, I might suggest a strong, well rooted love for the work, untiring patience and perseverance, with a studious observation of the results—and a fair sized bank account at your disposal, until your aim has been attained.

CLUB AND SOCIETY NOTES.

The Newport Horticultural Society will hold their usual strawberry and rose show in June.

George T. Powell delivered the lecture before the American Institute of New York on February 5; subject, The Apple, King of Fruits.

At the meeting of the Dutchess Co. Horticultural Society in Poughkeepsie on January 29, the culture of roses was the theme under discussion.

G. Blair, of Silver Springs, has offered a prize of \$25 for the best display of flowers at the annual fair to be held at Rockville, Md., in August.

Arrangements now under way promise to make the meeting of the Illinois State Florists' Association at Springfield on February 18 and 19 a notable event. Arion Hall will be used for the meetings and a banquet and dance at St. Nicholas Hotel will be given on the last evening. Albert T. Hey of Springfield is president.

The advisory board of the Connecticut State Fair has been appointed. Rufus W. Stimson, President of Connecticut Agricultural College, is president; A. F. Hawes, state forester, Prof. W. E. Britton, J. F. Huss, R. C. Patterson, E. B. Smead, J. Arthur Smith, W. F. Andross, Hon. Henry C. Dwight are among the members. A pure seed congress is to be given in March, and the chairman, E. Alexis Taylor, Forestville, Conn., would be glad to hear from the seedsmen and to receive catalogues.

CATALOGUES RECEIVED.

William D. Burt, Dalton, N. Y.—Condensed Price List of Seeds.

J. A. McDowell, City of Mexico, Mex.—Trade List of Cacti, Orchids, Bulbs, 1908.

E. E. Stewart, Rives Junction, Mich.—1908 Trade Price List of Gladioli and Hardy Plants.

Johnston Harvester Company, Batavia, N. Y.—Descriptive List of the Johnston Mowers.

S. S. Pennock-Meehan Co., Philadelphia, Pa.—Folder of the new forcing rose Mrs. Jardine.

J. M. Thorburn & Co., New York.—Special Price List for Market Gardeners and Florists. A business document.

G. Edward Schultz, Washington, D. C.—Seed Annual for 1908. A select list. "Money Maker" Cantaloupe is a leader.

L. E. Williams, Nottingham, N. H.—Price List of Native Trees, Shrubs and Plants. A very complete list of collected material.

J. L. Moore, Northboro, Mass.—Catalogue and Price List of the Northboro Dahlia and Gladioli Gardens for 1908. An excellent collection.

L. L. Olds Seed Co., Clinton, Wis.—Catalogue 1908. Oderbrucker "The Great New Barley" and a set of new Sweet Peas in colors form the cover illustrations.

Henry Nungesser & Co., New York.—Wholesale Price List of Grass and Clover Seeds. This list is a standard and indispensable to the dealer in these specialties.

Leonard Seed Co., Chicago.—1908 Catalogue. A cluster of eschscholtzias in beautiful colors adorns the title page. Contents A 1. Also Market Gardeners' Catalogue.

Schlegel & Fottler Co., Boston, Mass.—Seeds, Plants and Bulbs for 1908. Cover handsomely illustrated in grey and white. Illustrations and arrangement excellent throughout.

Barteldes Seed Co., Lawrence, Kansas.—Western Seeds for Western Planters, 1908. A handsome catalogue with covers illustrated in colors and a fine agricultural and horticultural list.

Griffith & Turner Co., Baltimore, Md.—Catalogue of Farm and Garden Supplies. A showy cover in brown and gold and a specially complete list of implements are the characteristics of this catalogue.

H. E. Fiske Seed Co., Boston, Mass.—Seeds, Bulbs, Plants and Poultry Supplies. A unique catalogue, album form, with special cover illustrations of cosmos, asters and hollyhocks. A good novelty list is included.

W. W. Barnard Company, Chicago,

III.—Annual Catalogue of Seeds, Bulbs, Plants for 1908. Handsome cream cover with illustrations of tomatoes and Dahlia Mrs. Roosevelt. Farm Seeds have special prominence.

W. Atlee Burpee & Co., Philadelphia, Pa.—1908 Wholesale Prices for Market Gardeners and Florists. Also Wholesale Catalogue for Seedsmen and Dealers only who buy to sell again. Both fully up to the Burpee standard.

C. C. Morse & Co., San Francisco, Cal.—Annual Catalogue of Seeds, Plants, Trees. A view of the firm's nurseries at Livermore with vignettes of roses in colors and a field of Florence Morse Spencer sweet pea make a very attractive cover. This sweet pea is Morse's special novelty for 1908, and it is a beauty which every sweet pea grower should have.

PUBLICATIONS RECEIVED.

Bulletin 209 of the New Jersey Agricultural Experiment Station, is an interesting description of novelties in vegetable fruits for general trial in 1908, by Prof. Byron D. Halstead. Sweet corn, tomatoes, egg plants, snap beans and summer squash seeds, the product of many registered crosses, are now offered for distribution and they will be sent to those who make application in writing in the order in which requests are received. The station is located at New Brunswick, N. J.

CELSIA ARCTURUS.

The showy plant which is the subject of our frontispiece this week was exhibited at Horticultural Hall, Boston, two weeks ago, and mention was made in our notes at that time of its availability for the commercial florists' show window. The flowers are bright yellow and the spikes last a long time before fully bloomed to the tips. It may be grown stocky by being kept close up to the glass. Otherwise it is inclined to grow too tall. Six or eight spikes of flowers at a time are not uncommon.

INCORPORATED.

King Construction Co., No. Tona-wanda, N. Y.; R. O. King, C. O. C. Hepworth, R. O. Spellman; capital, \$100,000.

The Summit Garden Co., Toledo, O.; Rupert Holland, W. H. Mosteller, W. H. Coalwell, P. S. Heabler, J. F. Le-Bold; capital, \$10,000.

Look through the Buyers' Directory and Ready Reference Guide. You will find some good offers there also.

WESTERN NEW YORK HORTICULTURAL SOCIETY.

Horticulturists from many states attended the 53rd annual meeting of the Western New York Horticultural Society, which convened in Rochester January 22 and 23. It was the largest and most successful series of sessions ever held by the society. The fruit exhibit was a grand display. Over a thousand plates of apples, pears and grapes were arranged on long tables, and the aisles were crowded all the time with interested growers. The larger part of the exhibit was from the State Experiment Station at Geneva, also a good-sized display from the Ellwanger & Barry nurseries, a number of plates of apples from the A. J. Smith farm, Gasport, and a table of apples of enormous size from Spokane, Wash., the exhibit of the Washington Real Estate Association.

The report of Secretary-Treasurer John Hall, as to the financial condition of the society, was gratifying. F. E. Rupert, chairman of the State Fair Fruit Exhibit committee, reported that the society won the first prize at the State Fair, though it was by a scant margin and he urged that the members pay more attention next fall and contribute more fruit.

William C. Barry, president of the society since 1890, delivered his address. He referred to the age of the society and what it had accomplished for fruit growers. Dr. W. H. Jordan, director of the New York Agricultural Experiment Station, Geneva, spoke of "Twenty-five Years of Experiment Station Work." "Tillage vs. the Sod-Mulch," by Prof. C. P. Hedrick, was an address of interest. There has long been contention between the factions that support the two methods of fruit culture. The conclusions of the speaker were strongly in support of tilling the soil and against the sod mulch method, and he cited many facts in support of his position.

Mr. C. Burritt of Cornell University gave a paper on "Co-operation in the Packing and Marketing of Orchard Fruits." Prof. P. J. Parrott, entomologist at the State Experiment Station, spoke on "Some Observations on Fruit Insects." He gave a comprehensive outline of the various pests that infested apple trees, also of the use of spraying machines. Great interest was manifested in his talk on the San Jose scale.

Prof. F. C. Stewart, of the Experiment Station, chairman of the committee on botany and plant diseases, reported in part as follows: "So far as fruit diseases in New York are concerned the past year was in no way especially noteworthy. There was no remarkable outbreak of any new disease and no alarming epidemic of the old ones. Neither are we aware of any strikingly important discoveries on the cause or control of the fruit diseases. In short, 1907 was just an ordinary

year in which fruit growers have had their usual troubles with fungus diseases, while plant pathologists, the world over, have been gradually extending our knowledge of things.

"Grape growers may be interested to know that the Ohio station is making an investigation of the dying of its bearing grape vines. It appears to be the same as a disease occurring in the Chautauque grape belt of this state, where it is known as the 'side arm' disease." Other station investigations of interest to grape growers are the spraying experiments and black rot studies which the Cornell station has under way.

"Another subject to which we have given some attention at the station recently is a carnation disease called bud-rot. For many years florists have had more or less trouble with carnation buds failing to open properly. The only treatment which can be recommended is the gathering and burning of diseased buds."

There were many more speakers, and many subjects considered during the sessions. George T. Powell, of Ghent, conducted the members' hour, in which anyone in the audience was permitted to ask questions, or speak on any subject which interested him. Six minutes was allowed each speaker, and the time was filled with many pertinent remarks from fruit growers.

The committee on resolutions summed up the work accomplished by the meeting and referred to the time given to the discussion of soil improvement as being in the best interest of the membership and closely related to the social problem affecting the migration from rural sections to villages and cities. The resolutions recommended that the members work for a liberal appropriation by the Legislature to expand the work.

The officers for the ensuing year are as follows: President, William C. Barry, Rochester; vice-presidents, S. P. Willard, Geneva; J. S. Woodward, Lockport; S. W. Waddams, Clarkson; Albert Wood, Carlton; secretary-treasurer, John Hall, Rochester.

PERSONAL.

Edw. Roehrs of Rutherford, N. J., is in Boston this week.

J. K. M. L. Farguhar of Boston visited New York this week.

Visitors in Chicago: Wm. Hagemann, New York; Emil Pielke, Geneva, Ill.

B. D. Kapteyn, representing Gt. van Waveren & Kruyff, Sassenheim, Holland, is in New York this week.

L. D. Robinson, Sr., Springfield, Mass., has had an attack of the grippe which has developed into erysipelas in the head.

Mark Aitken, florist, of Springfield, Mass., who has been ill with pneumonia for two weeks, is reported to be improving.

PHILADELPHIA NOTES.

Mrs. William I. Baker, who has recently passed through a serious operation at the Hahneman Hospital, was reported on the 3rd inst. as progressing favorably, and her family are in good hopes of having her home again in a week or two.

Liddon Pennock of Pennock Bros., has been laid up for over a week threatened with typhoid. The case is a grave one, apparently, but the physicians have not yet been able to diagnose same.

Clarence J. Watson, head of the Niessen force's, has been down for over a week with the grippe.

Edwin J. Fancourt of the Pennock-Meehan Co. has also been a victim. We hear of others but fear this report may look more like a hospital than a horticultural symposium if we tell all we know, so we leave the rest of them with our best wishes for speedy recovery.

William P. Craig is home from the convention feeling proud of himself and receiving congratulations on being the only one thoughtful and courageous enough to supply the President's omission of a carnation in his button-hole on McKinley day. The President thanked Mr. Craig very cordially.

James Krewson of Cheltenham is making an active canvas for county commissioner of Montgomery county, this state, and seems in a fair way to land the prize. He has the cordial support of Senator Roberts and the best element in his district.

Wedding bells will ring shortly for Miss Elizabeth Olmes of Altoona and A. E. Wohlert of Merion. Mr. Wohlert is a member of the Philadelphia Florists' Club and one of the most popular and successful landscape gardeners and contractors in this vicinity.

Edwin Lonsdale claims to have been the first to grow carnation plants for stock under glass during the summer months. He states that it was largely accidental and took place during the Grace Battles' period, some seventeen years ago.

NEWS NOTES.

Niles Nelson, Jr., Portland, Me., has been admitted into partnership with his father in the florist business.

The Greek-American Retail Florists' and Growers' Association, New York, has leased rooms at 118 Lexington Ave.

Silas D. Weymouth is to have charge of the eastern agency of the Phoenix Nursery Co. to be established at Waterville, Me.

W. F. Gale has been reappointed City Forester of Springfield, Mass., and the appointment has been confirmed by the Board of Aldermen.

The florists of Dighton, Mass., have held several sessions recently to fix a uniform price on potted and box plants for the coming season.

George M. Roak, florist, of Auburn, made a fine exhibit of potted plants and flowers at the Food Fair at Lewiston, Me., held last week.

A petition in bankruptcy has been

HENRY M. ROBINSON & CO., FLORISTS' SUPPLIES **15 Province St., and 9 Chapman Pl., BOSTON**

filed against L. I. Neff, florist, Pittsburg, Pa. The claims of the three petitioning creditors amount to \$4,100.

Construction work in the parks of Madison, Wis., will be active this year. Two marine dredges are now engaged in park projects, this being the fourth year of work by this means.

The Carolina Floral Co., Charleston, S. C., is remodelling its store and introducing many improvements which will make it one of the handsomest places of the kind in that section.

J. A. Newsham, New Orleans, La., has disposed of a part of his stock and houses to Knollock & Buechner, who will carry on the business. Mr. Newsham will give his entire time to the Magnolia Nurseries.

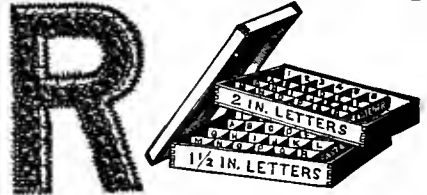

In our account of the exhibition of the Massachusetts Horticultural Society at Boston on January 25 we failed to mention the very large and handsome Lorraine begonias staged by William Downs, of Chestnut Hill, Mass.

Curbside vendors of violets have been ordered to keep off Chestnut street, Philadelphia. Quite a number of them, mostly Greeks, have been arrested and fined \$5.00 each for persisting in disobedience of this edict.

On the ground that a trespass had been committed a jury in the Supreme Court Circuit, late yesterday afternoon awarded damages amounting to \$1,700 to William A. Manda in a suit against the city of Orange and Ludwig Batt. The jury deliberated five hours, and, it is said, was a unit in the conclusion that the allegations had been proved, but took twelve ballots to determine the financial award.—Newark, N. Watkins & Nicholson, Hammon, N. J.

The Ansonia Floral Co., Main St., Ansonia, Conn.

On Friday night, January 31, the Greek-American Retail Florists' and Growers' Association held its annual ball at the Palm Garden, New York. There was a large attendance not only of the florists of the Greek persuasion but of florists and wholesalers generally. When the Greeks undertake anything of this sort expense is not considered and this affair was carried through on a scale of characteristic liberality.

THE FLORISTS' SUPPLY HOUSE OF AMERICA
 Without a rival in knowledge of the requirements of the trade and the ability to supply them. Our New Illustrated Catalogue, recognized as a work of art unprecedented in its line for variety, novelty and completeness, tells the story fully, and if you have not yet sent for it, do so now.
 'TIS FREE TO EVERYBODY IN THE TRADE
H. BAYERSDORFER & CO., 1129 Arch St., Philadelphia, Pa.

FLOWER MARKET REPORTS

In his speech at Washington last week Mr. Skidelsky referred to the carnation as "the flower of the masses, grown everywhere, sold everywhere." The carnation is certainly doing its best to live up to this mark in Boston at the present time. It is doubtful if ever before the market was so overwhelmed with the divine flower. All colors, all varieties, all grades, but mainly of the best, have been railroaded in until they are stacked up in most unwieldy profusion in wholesalers' hands. It is hard to recall a year when the market has been so quiet. Roses are the redeeming feature and move fairly well, American Beauties, Brides and Bridesmaids taking the lead. Violets are slow. Bulb stock is a drag and brings only low figures.

Trade was not very active the past week, doubtless due to the severe cold weather, which has the florist at its mercy. Social functions are on the quiet list, while the most prominent balls have passed. Stock on most lines could be had at any moment save short grade of white and pink roses, which were in heavy demand. Select Killarney, Richmond and Gates could be obtained but prices ruled high. The crops of carnations are on with most every one; the light varieties sell the best, but there are a good many of ordinary grade to carry over. Sweet peas of excellent quality are coming in, also La Reine tulips, jonquils, daffodils, mignonette, lily of the valley, violets, Harrisii lilies, for all of which there is only a normal demand. The supply of carnations for McKinley day exceeded the demand. The outlook for a big day's business seemed bright; had it not been for the severe cold weather the sales would have doubled, though prices advanced but little.

The cold, stormy weather of the past week, the temperature below freezing and on Sunday five degrees below zero, with attendant cloudiness, has shortened the rose crop materially. Bulbous stock is coming in plentifully but there is not much demand for same. Carnations are holding at steady prices. Single and double violets are abundant and of good quality. Among the retailers there is a feeling that the past month might have been worse if it had not been for funeral work. Plants of Primula obconica are conspicuous in show windows and are in good demand.

Business is moving along too easy for the ambitious ones, but as the January figures show a greater profit than one year ago this again proves the old proverb, "A steady drop follows the stone." We all are naturally aching for a swifter turn and bookings

made for the near future seem to hold that in store for most of us.

Business is anything but reasonable. The rose supply is not at all large, but quite ample for all demands. American Beauties are light in supply and the best grade brings good figures. Cattleyas and gardenias on account of a decreasing cut, are selling at better figures. Carnations are plentiful—much too plentiful to realize anything approaching prices usually obtained in mid-winter; in fact, the record of the past ten years does not show such poor results as at the present time. Bulb stock of all kinds is extremely plentiful and cheap; the same applies to violets.

Normal conditions prevailed in this market the past week. Sweet peas, Roman hyacinths, and Paper White narcissi were in large supply and much in excess of what the market could absorb. Carnations, on the other hand, cleaned up nicely until Thursday. After that the demand was weak. American Beauty roses, compared with same date last year, are better and more plentiful. Richmonds are in demand and are not over-plentiful. Fancy Bridesmaids and Killarneys are selling well, but there is very little call for medium grades. In Brides, the lower grades sell best. Cattleyas have the call in the orchid market, with Trianae leading. Cyripediums are draggy. Trumpet daffodils, freesias and tulips move out in large quantities, but the prices are much in buyer's favor. Easter lilies are neglected—as is mignonette for the time being—but strange to say the call is in active demand, with quality and quantity both up to the mark. Violets and lily of the valley both slightly improved as compared with a week ago and moving out a little better.

The greenhouses of Walter Scarlett, Kennett Square, Pa., were destroyed by fire on Jan. 20; the contents of one house was all that was saved. Loss \$3,000.

OBITUARY.

Andrew DeVoe. Andrew DeVoe, son of the late Stuart De Voe, an old-time seedsman, died in New York on January 26.

Edward P. Stannard.

Edward P. Stannard of Westbrook, Conn., died on January 25, in his fifty-third year. About three years ago he started in the florist business in which he was very successful. He held many offices of trust in his town, and was highly esteemed. A widow and two daughters survive him.

John Awckland.

John Awckland, 67 years old, died on January 23 at his home in Frankford, Pa. Since 1864 he has been identified with the florist business in this town, and in 1887 his increasing business led him to locate on the Bartlett farm, where he erected several greenhouses. He leaves a widow, one daughter and three sons.

Responding to the constantly increasing demand from the farmers and land owners throughout Michigan for information regarding the planting and care of forest trees and the management of standing timber, the Agricultural College, through its department of forestry, will prepare planting and working plans for farm wood lots upon receiving application for such work from the owner.

Seedlings of the best native forest trees will be furnished to farmers from the college nurseries at cost. There are now on hand in the nursery seedlings of white and red pine, spruce, white cedar, western yellow pine, red oak, chestnut, post locust, tulip, walnut, butternut and ash; also cuttings of Carolina poplar, basket and white willow.

WANTS, FOR SALE, ETC.

EXCHANGE

FOR EXCHANGE—First class Calla bulbs, one and two years old, for R. C. Carnations or Geraniums. W. J. Kingsbury, Derry, N. H.

Is Your Name In The Above List? If Not, Why Not?

A STAUNCH HOUSE.

We present herewith exterior and interior views of an iron-frame house erected last year by John A. Payne, Jersey City, for Stockton & Howe, Princeton, N. J. This house is 54 feet 6 inches wide and 317 feet long. The roof is supported on four lines of columns with the usual angle-iron pur-

proved satisfactory, much more so than if operated in very long lengths, affording better control over the heat of the house. Heating is done with one of Payne's large sectional boilers. Messrs. Stockton & Howe have expressed themselves as entirely satisfied with the operation of the plant

lins between the rafters, and is furnished with two lines of continuous roof ventilation, which are operated with self-locking worm and gear machinery. The worm rod extends down the columns at the sides, universal connections being used for the offsets in worm rod. The ventilation is arranged in 50-foot lengths, which has

and feel confident that they can easily maintain the temperature they desire in the coldest weather. They also state that there have not been three panes of glass broken during the year, apart from that broken through accident. This they consider exceptionally good, in view of the heavy storms the house has had to withstand.

EXEMPTING FOREST LANDS FROM TAXATION.

The encouragement of forestry is aimed at in a proposed amendment to the taxation laws brought before the taxation committee of Massachusetts by Assistant State Forester Cook, Representative Crane of Blackstone and Henry James, Jr., of Cambridge.

The present law allows a 10-year exemption from taxation on lands planted with trees at the ratio of 2000 to the acre. The bill advocated brings the number of trees down to 1200 and provides for a 20-year exemption.

CONTROLLING THE CODLING MOTH.

Oregon pear growers, who are greatly tormented by the codling moth, find the following scheme exceedingly useful: A selected tree is completely surrounded by a wire cage, in which the moths are confined. By careful observation of their development it is possible for the grower to know almost to an hour when he should begin to spray all his trees so as to destroy the moth without injuring the fruit.—Country Gentleman.

MISSOURI BOTANICAL GARDEN.

The annual financial report of the Board of Trustees of the Missouri Botanical Garden for the past year has been made public. Therein it is declared that the much-needed improvements at the gardens, such as the erection of new plant houses and an addition to the library, are seriously hindered by the outlay of money necessitated by street pavements, sidewalks and sewers laid in the streets adjacent to the garden tract. More than \$46,000 was expended in this way during the year, and it is estimated by the trustees that more than \$22,400 must be spent in the ensuing year for other public improvements. The total disbursements for the year amounted to \$171,974.26, and total receipts were \$170,360.32.

In ornamental bedding, 27,500 plants were used during the year. An increase of 10 per cent. in tulips used, an increase of 26 per cent. in variety of chrysanthemums and a total increase of 5 per cent. in plants of all kinds used are recorded for 1907.

An important Texas collection was studied, and forms the basis of an interesting pamphlet. More than 3300 books and pamphlets were added to the library and 58,668 new cards were placed in the index. The number of serial publications was extended to 1317, an increase of about 5 per cent.

The report recalls the appointment of Doctor Von Schrenk to the titular staff of the garden as plant pathologist.

LIST OF PATENTS.

Issued January 21, 1908.

- 876,951. Combined Roller and Harrow. Cordy C. Dollison, Lancaster, Ohio.
- 877,117. Insect Destroying Machine. Joseph Peil, Bloomer, Wis.
- 877,227. Manure Spreading Attachment for Wagons. Alexandra Turner and Lee Howard, Stillwell, Ill.
- 877,299. Grass Catcher for Lawn Mowers. Michael T. Curran, St. Louis, Mo.
- 877,316. Fertilizer Distributer. Edward F. Fisher, Atkinson, Neb.
- 877,359. Plow Point. Charles W. McWane, Lynchburg, Va., assignor to Lynchburg Foundry Co., Lynchburg, Va.
- 877,424. Combined Plow and Fertilizer Distributer. John B. Hicks, Wolf Pit Township, Richmond County, N. C.
- 877,434. Windmill. John H. Kappelman, Washington, Kan.
- 877,452. Harrow. William A. Preston, Roe, Ark.
- 877,469. Seeding Machine. William L. Paul, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind.

I write to express my appreciation of your excellent publication during the past year and to say that I shall be very glad to have it continued during the coming new year of 1908, for which I wish you eminent success, prosperity and happiness.

H. A. SURFACE.
Harrisburg, Pa., Dec. 28, 1907.

A PROSPEROUS POTTERY.

A. H. Hews & Co., Inc., of Cambridge, Mass., are now running their plant at full capacity after a partial curtailment the past month due to heavy additions which they were obliged to make. Two new boilers, kilns, dynamo and special machinery for preparing clay have been installed, and their output has been greatly increased. The firm has maintained for some years a large warehouse in Long Island City, but has now opened a similar branch in Chicago to facilitate the handling of their western business.

This concern having constantly in mind the welfare and pleasure of its employes, has provided a large recreation room, 25x55 ft., with pool and billiard tables, various kinds of games and reading matter.

The outlook for a prosperous year is particularly bright and according to present indications this plant will be run to its full capacity during the season now opening.

GREENHOUSES BUILDING OR CONTEMPLATED.

Rockford, Ill.—M. C. Sadewater, three houses.

Milwaukee, Wis. Gustave Pohl, house 25x100.

New Orleans, La.—A. Most, three houses, 20x100.

New Lenox, Mass. H. H. Dewey, range of houses.

Charleston, S. C. Carolina Floral Co., range of houses.

Jamestown, N. Y.—Thomas Russell, three carnation houses.

E. Mansfield, Mass.—B. D. Vickery, cucumber house, 82 feet long.

The question of erecting a new city greenhouse at Sandusky, O., is again brought to the front and it is possible that Park Superintendent Roth's wishes may yet be acceded to and steps taken this season to provide the much-needed facilities.

NEW HEATING APPARATUS.

James Hamilton, Mt. Washington, Md., new 60 h. p. boiler.

The Misses Childs, New Canaan, Conn., Lord & Burnham boiler.

"SCALECIDE"

HAS MADE SPRAYING EASY THEN WHY NEGLECT YOUR TREES?

The N. Y. Herald, November 17, '07, says: "The chances are about a hundred to one that you have the San Jose Scale on your place and do not know it," and advises the use of "SCALECIDE." This is good advice. "SCALECIDE" has been tested and tried, and found thoroughly effective. The same yesterday, to-day, and all the time. One gallon makes 15 to 20, ready to use, by simply adding water.

Prices: 1 gal., \$1.00; 5 gal., \$3.25; 10 gal., 6.00; 50 gal. bbl., \$25.00, F. O. B. our factory. Order to-day. Write for booklet Wand free sample.

B. G. PRATT CO., Mfg. Chemists,
11 Broadway, New York City.

"HORICUM"

TRADE MARK

"HORICUM"

KILLS SAN JOSE SCALE

Directions for Use.

This preparation is Lime, Sulphur and Salt, making a concentrated Poly-sulphide of Calcium. The Salt adds to the adhesive properties, but the destructiveness to Scale Life lies in the Calcium Sulphide. Aside from its ability to destroy San Jose Scale, Horicum is a Fungicide, preventing the free development of fungoid troubles.

Shake package thoroughly or take the top off. The color in its concentrated form is a deep bronze green. Do not pour off the clear liquor only, stir the Horicum from the bottom of the package, add 20 parts of water (hot, if you can get it) for ordinary use. For a stronger dilution when the growth is all dormant, use 10 parts of water only (hot, if you have it) and spray thoroughly. By grading your dilution you make it any desired strength. Specific gravity, 1.56. Total Poly-sulphides, 25% by weight. Send for pamphlets to

HAMMOND'S SLUG SHOT WORKS
Fishkill-on-Hudson, N. Y.

Kills San Jose

HEATING THE GREENHOUSE

thoroughly and economically during the coming Winter is the problem now engrossing the mind of the Florist who takes time by the forelock.

I am in a position to help you to the best solution of this problem, I have done it for others, I can do it for you.

It will be to your advantage to consult me and get quotations on your heating plant either erected complete or for material ready for erection.

I have the largest line of C. I. and steel greenhouse boilers on the market and can give prompt shipments.

ATCO, N.J.

Winsor and White Enchantress

**Strong Rooted Cuttings
Now Ready for Delivery**

WINSOR has proved to be the finest carnation in the light pink class. We sold a large quantity of it last year, but there will be a much larger sale for it this year. At the English Carnation Show held in December, it was the winner in the light pink class. It is doing well everywhere and will supplant everything in that color.

WHITE ENCHANTRESS will occupy the same position among white carnations that Enchantress does among flesh pinks. It has all the good qualities of the common Enchantress,—long stem, earliness, large size, freedom, etc. In our opinion, it is by far the best white carnation ever introduced.

We have a splendid stock of both Winsor and White Enchantress ready for immediate delivery, and will guarantee perfect satisfaction with the cuttings supplied. Do not wait, because the demand for these varieties is bound to be enormous. **Order early, while we can promise immediate delivery,** and secure gilt-edged stock. We have a large stock of both of these varieties, and all our cuttings are heel cuttings, taken from flowering stems. On account of the quantity that we are growing, we are not obliged to over-propagate, and our stock is in the most perfect and healthy condition.

Strong rooted cuttings from sand, \$6 per 100, \$50 per 1000. Extra strong transplanted cuttings from soil, \$7.50 per 100, \$60 per 1000. Strong established pot-grown plants \$9 per 100, \$75 per 1000.

NEW My Maryland ROSE

Best up-to-date commercial rose; read what others have to say about it.

Among the many new roses of the year there is none which has impressed us more as being worthy of a thorough trial. It has been exhibited only as 294, being a seedling raised by John Cook of Baltimore. A beautiful rose with an exquisite fragrance; in color it may be described as a soft salmon pink which brightens up beautifully as the bud opens. We are intending to plant this rose in quantity.

A. N. PIERSON, Cromwell, Conn.

In reply to your inquiry what we think of your new rose, My Maryland, we would say that after seeing others we still believe that you have the best new rose of modern times.

GUDE BROS., Washington, D. C.

The Mechanical Fineness of Fertilizers The Fertilizing and Selecting of Cyclamens

For the many users of bone or slag we publish these remarks although these are not soluble fertilizers. What solubility they have, however, at the best is so dependent upon fine grinding that we wish to drive home the close connection between fine grinding and immediate value.

We are aware that some prejudice exists against fine bone as some maintain its greater liability to adulteration. This may have some truth in it. The way to spot this sort of thing is by the microscope and chemical analyses, which can not be carried about on the person, and even these are not entirely satisfactory. Now we hold no brief for the State Experiment Stations, in fact, we may sometimes differ with them, but this is what they are for, for one thing, and if a brand is rated well, year after year and comes from a reputable house these facts should have due weight.

Experiment Stations now grade bone and other fertilizers according to their fineness in addition to the usual chemical analyses. A column is marked "Mechanical Condition" and a screen of about 40-mesh is taken as a standard. What goes through is termed "fine," what does not, "coarse." The larger proportion of tests show more coarser than finer particles.

A word as to "mesh." By this we mean so many holes to the linear inch, the size thereof depending upon how much room the wire or fabric takes up. This has not been made standard as several scales are used even in this country, but for the smaller sizes as 40 and over, it is well enough to consider the wire as thick as the hole is wide so 40 mesh would mean a hole of one-eighth of an inch across.

It may not be practicable to grind to 200 mesh although this is not uncommon in other industries. One hundred can not be very difficult or expensive as shown by the fact that an importer of slag has told us that this runs about 100 mesh. This is a cheap source of phosphates.

This array of figures is to show at a glance the great increase of area with fineness which means just so much progress toward value extracted. This method of stating a truth may make a clearer appeal to the understanding than mere assertion or even eloquence (were we capable of this last.)

Size	Surface	Proportion
Sphere 1 in. in diameter	3. sq. inches	1
" 1-2 " " "	6. " "	2
" 20 mesh	125. " "	42
" 30 mesh	189. " "	63
" 50 mesh	314. " "	100
" 100 mesh	628. " "	200
" 150 mesh	952. " "	300
" 200 mesh	1256 " "	400

Notice that a substance averaging 20 mesh would have only a fifth the surface of one averaging 100 mesh.

The additional cost of fine grinding should not begin to be as expensive to the consumer as the good results obtained immediately.

Rudley M. Bray

In reply to Mr. Stuart's enquiry in last week's HORTICULTURE, regarding the cyclamens at Sandringham, and the methods of selection carried on there, I may state that the system followed is, I believe, exactly similar to that of any seed raising firm, only of course the operations at Sandringham are done on a very small scale.

No, Mr. Stuart, we did not do our fertilizing in a house of mixed colors, neither could one ever hope to improve, or even retain, the good qualities of a strain of cyclamen, by following such a course, as it is against all the laws of selection and is inconsistent with the object we have in view. The idea which should dominate us above all things, before we start our operations, is that we should first form an exact conception of the type of plant we are striving to produce, and then confine our efforts to "selected" plants which come nearest to this ideal.

We must of course keep each color separate. Few people outside the large trade growers could afford to devote a separate house for each color; neither did I think it necessary to do so, when I advocated private selection in my previous article.

At Sandringham, the greatest pains was taken each year when selecting the plants which were to be set aside for seed purposes. Care was taken to retain for this purpose only the finest plants of each particular color. Each color was kept entirely by itself, a scheme of isolation being carried out, and as there were plenty of houses suitable for our purpose, each color was given a corner of a house to itself. Before starting our operations, we carefully noted the result of the previous year's work, and were thus in a position to see whether our past efforts along different lines had been successful. If one sort showed signs of losing color, we at once took steps to remedy it. If, on the other hand, we required more vigor, and new blood might give us our desire, then we scoured the country until we found the exact type of plant which would be suitable for the purpose.

In fertilizing each plant we always had a definite object in view, and a record was made of every stage of the work. This was kept, and compared every year; it showed us the results of certain crosses which had been made in previous years and, also, gave an idea as to the amount of progress being made, and I can assure Mr. Stuart that we always advanced, especially in the quality of the flowers, and in richness and coloring.

Mr. Stuart remarked that with him poor results came from selection of seed from good flowers, the size of the flower, foliage and stem being retained "and improved" but not so the color. He ought to have informed us whether any steps were taken to remedy this fault. It appears, however, that Mr. Stuart could not have been very persevering in his efforts, or he would have gained at least some small measure of success. Our experience has been that improvement in color can only be attained by the union of colors, bearing in mind of course the natural law, which says that we must unite two to make one. The artist, for example, has always to mix certain colors to get the

particular one he desires and this same theory applies to the work of selection.

I admit that rapid degeneration is common with cyclamens, unless careful selection is maintained each year. Experience has satisfied us, however, that by patience and perseverance we can gradually, year after year, fix and improve our strain, and produce seed for our own private use, superior in every respect to that sold by the average seedsman.

Mr. Stuart in his conclusions states that he is still of the opinion that good culture helps greatly in bringing out the rich qualities of a strain of cyclamen. Quite so; that goes without saying; but I think he will also admit that no amount of good cultivation could ever bring out any rich qualities from a bad strain. After all is said and done, it is selection which dominates the natural world, or in other words, it is the survival of the fittest.

North Easton, Mass.

The Hydrangea Question Settled

To the Editor of HORTICULTURE:

Mr. E. G. Hill has asked me in your issue of January 25 to determine the name of the handsome sterile form of *Hydrangea arborescens* named by him, *Hydrangea arborescens alba grandiflora*.

There are at least two forms of the North American *Hydrangea arborescens*: on the first the leaves are oblong-ovate and mostly acute at the base; on the second the leaves are broad and cordate at the base.

Of the first of these forms a variety *sterilis* was described by Torrey & Gray in their *Flora of North America* (i. 591) published in 1840. In this form which had been discovered at Wysox, Pennsylvania, the ray-flowers are not more than half an inch in diameter and the sepals are oval and round and furnished with a short point at the apex. This certainly is not the plant which has been cultivated and described by Mr. Hill, for his plant is a form of *Hydrangea arborescens* var. *cordata*, with neutral flowers an inch across and broadly ovate and acute sepals.

In the *Mitteilungen der Deutschen Dendrologischen Gesellschaft* for 1907 (p. 71) Mr. Alfred Rehder has proposed the name of *Hydrangea arborescens* f. *grandiflora, forma nova*, for Mr. Hill's plant and this is the name by which it should be known. As Mr. Hill, in using two varietal names for the same plant, did not follow the recognized rules of botanical nomenclature, Mr. Rehder who next described the plant, being at liberty to select either of the two varietal names previously applied to it, very properly took *grandiflora* as being the more descriptive of the two.

It is interesting to note that in the Gray Herbarium there is a specimen of *Hydrangea arborescens grandiflora* collected at Nashville, Tennessee, without date or name of collector.

Arnold Arboretum, Boston.

The Perennial Border as a Recreation

When once a move is taken to improve the home grounds with any kind of plant or plants, it is very hard to tell where to stop. The interest that this first planting arouses gradually leads to a recreation and often a decided hobby, and it is a hobby that is not only permanent, but is also an important factor in every estate, large and small. When once started, I feel confident in saying that additions and important changes will constantly be made year after year.

There are hobbies and hobbies; everybody has a hobby or should have; but the greatest and best of all is one that brings us as near to nature as possible, and the planting of a hardy perennial border is a recreation that it is hard to beat. The business man enjoys it morning and evening; the rest of the family all the time. It is a continuous pleasure from the middle of April till October, and during these six months there is not one day that the border looks exactly the same as the day preceding. For this reason, fresh interest develops from day to day, as there is always something new and different to look forward to. And this interest is not confined to the flowers alone, but the foliage, fruit, and habit—all play an important part in the general pleasure derived.

As soon as the warm spring days come we begin to watch for old friends, hepaticas and anemones first greeting us. Anemone pulsatilla (pasque flower) is one of the handsomest of spring flowers, with its beautiful silky sepals and large violet flowers. The seed-head is also very pretty reminding one of clematis, and the foliage is ornamental till autumn.

I have no intention of mentioning every perennial grown, but only some of those that are not as generally known or used, and also a few of the best older kinds that should be in every border. Primroses and polyanthus soon follow the hepaticas and always do well. Mertensia virginica is very early, having light blue tubular flowers in clusters, on stems long enough for cutting. Phlox divaricata var. Laphamii is, I think, going to take the place of the type, as it will stand our hot summers better. Trollius is one of the showiest and handsomest of spring flowers, but it is very confusing to dealers to have them called double buttercups (*Ranunculus acris plena*) instead of Globe flower which is a more appropriate name, and describes the flower very well. The double pink variety of Lychnis Flos-cuculi is excellent for cutting purposes, and will continue to bloom as long as the ground is moist.

June ushers in peonies, German iris, and lilies of some varieties. The new Anemone Italica var. Dropmore is a fine border plant, but is useless for cutting. The flowers are of good size, deep blue, borne on large compound spikes. The dianthus or hardy garden pinks are as popular as any perennial and are general favorites with everyone. That charming variety, Na-

poleon III, most certainly takes the lead and should have special mention. The double form of *Spiraea filipendula* is not planted enough; it always looks well, with its fern-like foliage and graceful cream white flowers; is good for cutting, although the petals drop somewhat.

Delphiniums and aconitums of the *napellus* section are July favorites; not to forget Japanese iris, hollyhocks, sweet williams, lupins and gaillardias. *Tritoma* has graceful foliage and distinctive flower heads. The double *Babies' breath* is becoming as popular as the single form. *Clematis mongolica* is a decided improvement on *C. recta*, *Chrysanthemum maximum* "King Edward" has flowers from three to four inches in diameter and is a continual bloomer from July till frost. *Phlox decussata* starts blooming the latter half of July but the full beauty is not seen till August.

Aster amellus elegans, *rudbeckias*, *helianthus*, *stokesia* and *veronicas*, now take their turn in helping to make the garden beautiful. *Cephalaria* is not very generally known, but is very handsome with its tall branching spikes of lemon yellow flowers, similar in shape to an annual *scabiosa*. *Helium autumnalis superbum* is a very handsome plant, growing about six feet high, with flowers of a showy terra-cotta red.

Asters help to make September glorious. *Aconitum autumnale*, and *A. Fisheri*, Japanese anemones, *Pyrethrum uliginosum* and late blooming sunflowers, all do their part.

Eulalias make a fine show in October and with the hardy *chrysanthemums* end the season. And all this interesting succession of flowers will be renewed year after year; old friends will be recognized and new ones added.

Frederic J. Rea.

The Ideal Horticulturist

It is noteworthy that the practise of Horticulture tends to develop a similarity of character. Local conditions give a slight variation, yet the general lineaments bear unmistakable marks of resemblance to a certain type found the world over, which is clearly seen to be the product of a cultivated environment. A good deal is written on the utilization and arrangement of Nature's material; too little is noted of that silent moulding influence she radiates upon her devotees.

Man is ever larger than his greatest work. In the production of landscape and floral art both cause and effect are within himself; he is the responsive chord which vibrates the music of Nature's melody back to his soul; he thus gives a voice to the mute creation. It is this power of gentle ministry to the sense of beauty in man, which is the basal argument for our business; if our products are not beautiful they cease to be useful; in the last analysis, it rests not upon utilitarian but upon aesthetic foundations. It is inevitable that the struggle for existence brings out the commercial as-

pect; we lose much, however, if we entirely ignore the poetry and beauty of the things we daily handle.

To the trained eye every plant is a symbol and reflects an idea. The power to extract the spiritual essence, to see the plant soul beneath the appearance, to identify and seize the substantial or evanescent image, may serve as subtle compensations in a none too profitable business.

Then, too, Nature challenges thought and gives to the mind that gentle impulse and exercise so helpful to a wise and calm outlook on life. This habit of inductive reasoning, from the simple to the complex, the correlation of observed facts, tend naturally to make plant lovers either moralists or philosophers.

"Flower in the crannied wall, I pluck thee out of the crannies,
Could I know thee root and all I should know what God and man is."

To get the most out of Nature one needs the blending of the scientific with the aesthetic spirit; the arid tablelands of thought need and gain enrichment by the soft warm drapery of color.

The analytic spirit searches outward. We feel beauty by the photographic method of exposure; what is recorded also will depend on the sensitiveness of the plate; a certain receptivity of mood is needed which cannot in the rush of life be always commanded, for at different times the same object does not make an equal appeal.

There are two methods of approach to Nature's treasure trove, namely the microscopic and the telescopic. In the former concentration is needed to exclude for a time the general view in order to explore "the small proportions in which we just beauty see." The telescopic seeks a definite impression of the whole line of vision. To adjust one's mental lens easily to both methods is a mark of the ideal horticulturist, the reward of practical experience.

The aim of the worker should be to secure insight into and a broad outlook over all departments; at the same time making himself a specialist in at least one or two branches. An apprentice needs a little wise direction with a view to the effect upon his future character. It is a mistake to start a boy inside; give him a chance to build up a sound constitution outside, then, taking his education under glass later, he will come to a full-orbed experience with energy and power to turn it to practical account. There is a species of exotic tenderness about men who have worked solely amongst orchids and high-colored foliage plants, which shows itself in a fastidious contempt for other branches. Possibly a change outside for a time with rougher work might result in a more healthy outlook on every aspect of the great field. Many enter the business lured by the love of the beautiful only to find there is another side, rough and dirty, though not necessarily sordid. One cannot secure Nature's best without sweat of hand and brain. Eternal vigilance is the price paid by every successful plantsman. Necessity is a stern taskmaker, it is true, but glimpses by the way of a world made beautiful should lighten the toil and the exacting nature of the work should serve to give zest to the pleasure of producing, as clouds give a brighter relief to the rainbow. If a man is made of the right material the business will evoke his best; the ideal horticulturist has gained by the nature of his tasks, he has grown in "sweetness and moral height."

The passing of
 "sterilis"

All parties who now wish to persist in cataloguing "sterilis" will undoubtedly be given free scope in their endeavors, whilst their allies, the "hindsight" critics, ponder on the dangers of a little learning and the mononymous scribbler silently steals away.

A proposed
 rose bulletin
 Rose Journal.

Our congratulations to E. G. Hill on the outcome of the Hydrangea controversy. Also to the S. A. F. registration department in its vindication.

The American Rose Society, through its energetic secretary Benjamin Hammond, announces its purpose to issue a quarterly publication to be called The

Enterprise. This is in accord with views expressed by several active members of the Society at the annual meeting in Washington last year. We can see no reason why it should not, with good management, succeed. The membership of the Society is small, so far, but the country boasts many thousands of devotees of the rose — and their number is rapidly increasing—who, if they can be reached and rounded up, will be glad to support a publication giving acceptable and timely news about the queen of flowers and will thus furnish a basis for the support of advertisers without whose support the project could not be made self-sustaining. We shall be glad to see the plan successfully put in operation. The influence of such publications is always on the right side for the advancement of horticulture and the benefit of the horticulturist. We congratulate the executive committee of the Rose Society on their courage and extend our heartiest good wishes for the success of the enterprise.

Our attention has been called from time to time during the present season, to occasional articles in the daily papers from various places, in which the violet is spoken of as no longer fashionable or popular. It is unfortunate for the violet that at a time when it is produced in perfection and in greater profusion than ever before it should be discredited in this manner. While it is not true of all yet it is true of a great many people that they are influenced largely by what they read in the daily papers and undoubtedly the sale of violets is affected to a greater or less extent by the articles referred to, the origin of which may often be traced to the unwise remark of some local florist, made to gain some momentary object without thought of the widespread injury inflicted on the trade in general in which he himself must indirectly share. To advance the interests of the rose, carnation, orchid, violet or other flower in the sale of which one may be specially concerned it is not necessary to disparage the others. If any flower is doomed to lose caste with the public let it not be said that the florist trade bears any of the responsibility.

For many years those growers who by reason of soil or other local advantages found themselves able to produce violets of a superior quality were in a position to dictate market prices and they did it, as anybody else would have done under the same circumstances. The enormous increase in production which followed, year after year, was the natural result. It was also natural and inevitable that the limit would be reached some time and it took no great prescience to see that in the order of things the day would come when in the great flower communities the exclusive special violet would make its appearance on the curbstone stand and to realize that, thenceforth, price control would shift from grower to consumer and that old conditions could never be brought back. How much of the reported indifference or actual antipathy to the violet in certain fashionable circles is due to the abundance and consequent commonness of the flower we shall not attempt to say but unquestionably this factor must be taken into account. Further, the well-known practices of the curbstone peddlers in doctoring up stale stock with perfumery is an offense which must react to the detriment of the violet industry. The truth is that the violet has been overburdened and abused. As to its future—well, only the growers know whether it is still a profitable proposition on the basis of this season's returns.

AFTER ADJOURNMENT.

As spring approaches let us plan, each and every one, to seasonably encourage popular horticulture—the most elevating recreation that can be carried to the threshold of every home. This sentiment faithfully put in practice would treble the plant, flower and seed trade the first season.

Horticulture is a practical pursuit requiring industry and care rather than scientific learning, yet he who assimilates and digests as much as possible of the fare that science continually places before him, in so far as it has a bearing on his work, will find it all helpful in directing the exercise of his industry and care upon right lines.

Our Philadelphia correspondent in his usual airy manner comments upon the rumors of petty graft in the private use of public plants in Boston and Washington and naively adds—“No such graft has ever been heard of in the Quaker City.” That “heard of” is used with wisdom aforesaid. Is it possible that the Quaker City is slow of hearing?

Summer school gardens, which have been conducted by the Philadelphia Board of Education for several years, will be curtailed this year because of lack of money. This was determined yesterday by the Committee on Special Schools. The action may foreshadow the dropping of the garden system altogether.

According to the report of William Stecher, director of physical training, there are 59 playgrounds, and the attendance during the year just past was 797,545 children. The average cost of maintenance was 3.8 cents per child a day of 7 hours.

At the summer gardens, of which there are 10, the total attendance was 91,000. They were open only 5 1-2 hours a day and cost 12 1-7 cents a child each day to maintain.

“I am inclined to question very much the wisdom of maintaining the gardens at all,” Professor Stecher said. “The attendance is comparatively small and the expense is heavy.”

The above information comes from the Philadelphia Ledger. Physical culture professors' advice is good only to a limit. Philadelphia, we hope, will look to a different source for intelligent advice concerning the intellectual and aesthetic welfare of her little ones. There are times when 12 1-2 cents' worth of healthy brain is a better bargain than 3.8 cents' worth of muscle and agility.

PRIMULA ACAULIS.

The garden forms of *Primula acaulis*, or *vulgaris*, are numerous, but none are more beloved than the pale lemon-colored original type with its deliciously fragrant blossoms borne singly on slender pedicels and welcomed throughout Europe and especially in England and Ireland as the sweetest herald of spring. It is fairly hardy in the latitude of Boston; it thrives all right in a sheltered location with a slight mulch of leaves or other material. It is easily raised from seed and improved strains are abundant. As pot-plants for Easter sales these have become very popular in recent years, the New York market especially using enormous quantities of this as well as of the polyanthus types.

LIBRARY NOTES.

[Any of the books mentioned in Mr. Payne's reviews can be supplied at publishers' price from the office of Horticulture.]

In accordance with our usual custom of giving at certain intervals a few notes on recently published gardening books on this side of the Atlantic we have now once again the pleasure of drawing our American readers' attention to those that have appeared since the last contribution under the above heading. The post of honor must unquestionably be accorded to a very handsome art volume upon a subject that has already been liberally treated by author and publisher alike and is entitled *Italian Gardens*, after drawings by George S. Elgood, R. I., with notes by the artist. (Longmans, Green & Co., London and New York). This is a grand addition to an ever interesting subject of horticultural interest, and this newly published work has the advantage over most of the others of being illustrated entirely in colors, there being 52 plates from drawings by the author.

The contents contain interesting chapters on the various villas and gardens depicted by the brush of the artist; they are mainly descriptive, the historical not being enlarged upon to any great extent. Six main divisions form the entire scope of the book and these are Pompeii, Roman Villas, Villas at Frascati, Florentine Villas, other Tuscan Villas, Villas of Northern Italy. Price, \$10.00.

Gardening in Town and Suburb by Harry H. Thomas. (Longmans, Green & Co., London and New York). The author of this little handbook is already known to the readers of Horticulture, and is one of those writers of the younger generation who promise to occupy a foremost place in garden literature. There is a good deal of practical matter comprised in this handy little volume. There are useful chapters on roses, carnations, lilies, bulbs, annuals, climbers, shrubs, etc. The warm, and cool greenhouse, and window gardening also come in for a share of the author's attention. Price, 63 cents.

Villa Gardens by W. S. Rogers. (Greening & Co., London). Some few years ago the author of this treatise published a manual on the laying out of Villa Gardens and the book now issued appears to be a cheap reprint. The main idea of the author is the rectilinear system and he gives a number of plans with perspective views of some of his suggested designs. In our opinion the book fills a long felt want. Too often we notice in London suburban gardens an absolute lack of ingenuity in the laying of them out. Many of the owners affect a kind of wobbly winding path that suggests nothing artistic and rather causes one to ask if in the planning of the paths the designer was not suffering from shaking palsy. Price, 62 cents.

Pictorial Guide to Gardening by the editor of *Garden Life*. (Cable Printing and Publishing Co., London).

This is one of the many cheap issues of practical garden books that are being turned out by the many horticultural publishers here. It is a closely printed book of 250 pages in paper wrappers, dealing in practical language with almost every phase of the garden art. The work is illustrated with small line engravings in great profusion and is certainly one of the cheapest books ever published. Price, 25 cents.

Bulletin de la Societe Francaise d'horticulture de Londres. This is an annual publication issued by the French Gardeners' Society of London. In every way the society is flourishing and doing a useful work by the way in which it places young French gardeners in situations in England and young English gardeners in France. It is worthy of note that the society is entirely self supporting and receives no subsidy from the French Government, as some French societies abroad do. Free.

Flowers and Fruit for the Home by J. L. Richmond. (T. N. Foulis, Edinburgh and London). A series of practical papers on horticulture for amateurs and gardeners by the Garden Editor of the well known ladies' newspaper “The Queen.” It is well printed and contains a number of illustrations of flowers, etc., executed in photographic process blocks of fair average quality. Price, 80 cents.

The Book of the Chrysanthemum by Percy S. Follwell. (John Lane, London and New York). This is one of a series of practical garden books which has now reached its 29th volume. The author starts with an account of the history of the chrysanthemum which does not contain evidence of very much original research and has several inaccuracies which should be corrected in another edition. Then general culture follows with succeeding chapters on selecting the buds, housing the plants, insects, diseases, hybridizing, raising new kinds from sports. For the exhibitor some special chapters are reserved then follow bush and trained specimen plant culture, market and early varieties, for exhibition, etc. Price, 62 cents.

Rock and Alpine Gardening by H. Hemsley. (J. Cheal and Sons, 53 Victoria street, Westminster). This is a phase of gardening that is unquestionably attracting a great deal of attention latterly. Ordinary gardening books more or less contain chapters on the rock garden but there are several works of recent date that deal exclusively with the subject. Mr. Hemsley is a practical man in the art of rock garden making and his useful little volume will be an acceptable one to anybody intent upon laying out such a desirable addition to one's garden. Price, 87 cents.

C. HARMAN PAYNE.

A FRANK TESTIMONIAL.

My ad. with you has proved the most effective of any thus far.

CHAS. A. KIBBE.

Elmhurst, Ill.

NEWS OF THE CLUBS AND SOCIETIES.

NEW JERSEY FLORICULTURAL SOCIETY.

An informal reception by the new president, Malcolm MacRorie, was given on the 7th inst. when members and friends gathered in force to wish him a successful administration. The society begins its fifteenth year with great promise. It is particularly strong in prominent private and commercial orchid growers, numbers all the leading gardeners and florists for fifty square miles around Orange, and has the support of the plant and seed trade and the good wishes of everybody.

Upon this occasion were present: Thomas J. Grey, of Boston; J. B. Kidd, seed appraiser for the port of New York; William Duckham, Arthur Herrington, Charles H. Totty, J. Austin Shaw, C. McTaggart, W. A. Manda, nearly all of whom addressed the gathering, and the Rickards' Bros., who dispensed sweet music. Most of these were in light and humorous vein. W. A. Manda spoke upon the forthcoming National Flower Show at Chicago, the advance sheets of the schedule of which he produced, calling attention to the fact that in it there was an inducement for all to contribute to one or more of its various classes.

The presentation of four silver cups won in the monthly competitive shows during the year was made to Peter Duff, William Reed, Max Schneider and Arthur T. Caparn with appropriate remarks by George Smith. Letters were read from H. Weber, John E. Haines, Chicago Carnation Co., and F. R. Pierson in connection with the special carnation night to take place in March and a characteristic letter of regret from W. J. Stewart, who is usually present at all these gatherings.

The floral decorations were contributed by members and consisted of carnations, flowering bulbs and a vase of *Euphorbia Jacquinæflora* with sprays two feet long, grown by Peter Duff, which Arthur Herrington declared he had not seen equalled since he was a boy in England. The evening was pleasantly interspersed with vocal and instrumental music and recitations, with light refreshment.

J. B. DAVIS.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

Owing to the halls of the Massachusetts Horticultural Society being rented for the entire week during which the regular club meeting was to have been held, a postponement of Carnation Night to Tuesday evening, February 25, has been found necessary.

W. R. Pierson, of Cromwell, Conn., will be the lecturer that evening, and in addition to our local members F. R. Pierson, Tarrytown-on-Hudson, N. Y., H. A. Jahn, New Bedford, and other carnationists from a distance will be present and take part in the discussion.

There will be numerous exhibits of novelties and the meeting should prove of deep interest. A record attendance is assured. A cordial invitation is extended to any who may not be club members to join us on this occasion.

W. N. CRAIG, Sec'y.

PITTSBURGH FLORISTS' AND GARDENERS' CLUB.

The meeting of the club February 1 was a Carnation Night, with a competitive exhibit by the home growers, divided in the two classes of commercial growers and private gardeners. J. Hutchinson read a provisional schedule for exhibits by private gardeners for prizes from June, '08, to and including May, '09. This schedule was laid over to the March meeting. The following officers were unanimously elected for 1908: F. Burki, president; E. C. Reineman, vice-president; H. L. Blind, treasurer; H. P. Joslin, secretary; E. C. Ludwig, assistant secretary; P. S. Randolph, Inc. Bader, C. S. Crall, executive committee. Ex-president Jones on retiring from office was warmly thanked for the two years of hard work he has given to the interests of the club. President Burki on taking the chair said that he could not make the club a success alone, but that he would do his part, and asked the members for their hearty support and aid.

The Pittsburgh delegation returned from the convention of the American Carnation Society in high spirits and full of enthusiasm. They feel that by withdrawing in favor of Indianapolis on the tie vote, they have silenced all opposition to Pittsburgh as the convention city in 1910, and the club is already talking of what they will do for the convention.

President Burki and Mr. Wyland called attention to the good work being done by the American Carnation Society, and solicited for it the hearty support of the members. Mr. Smith gave his experience with hydrocyanic gas, being much in favor of it. The secretary's report for 1907 showed a membership of 159.

Prizes were awarded as follows: Carnations, general display. Dark Pink. A. T. Lorch, 1st with Lawson; F. H. Westhoff, 2d with Aristocrat. Light Pink. Pittsburgh Rose & Carnation Co., 1st with Enchantress; J. L. Wyland, 2d with Enchantress. White. F. H. Westhoff, 1st; S. J. Hatch, 2d. Pink. Pittsburgh Rose & Carnation Co., 1st with Winsor; J. L. Wyland, 2d with Rose Pink Enchantress. Red. F. H. Westhoff, 1st with Robt. Craig; Finleyville Floral Co., 2d with Beacon. Private Gardeners. Thos. Jenkinson, 1st; N. C. Madsen, 2d. Cultural certificates to N. C. Madsen, gardener for *L. H. Boggs*, for *Primula obconica gigantea*; H. S. Price, gardener for G. B. Laughlin, for cyclamen; Jas. Hutchinson, gardener for Dr. Shafer, five varieties of odontoglossum which were grown in leaf soil covered with subaqueous moss. Certificate of merit to John E. Haines, for carnations Imperial, Pink Imperial and John E. Haines.

This is the first time that a competitive exhibition has been held by the club. The flowers were of a high order of excellence and much interest was shown.

H. P. JOSLIN, Sec'y.

NASSAU COUNTY HORTICULTURAL SOCIETY.

The third annual dinner of the Nassau County Horticultural Society, given at the Oriental Hotel, Glen Cove, Wednesday, Jan. 29, was a very enjoyable affair, about fifty members and guests being in attendance and partaking of the excellent spread. The tables were attractively laid and handsomely decorated with flowers and plants.

President Janeicke extended a cordial welcome to the assembly at five o'clock, and at the conclusion of the repast called upon J. Austin Shaw to act as toastmaster and that gentleman's pleasant opening address and his genial and tactful introduction of the several speakers gained him much commendation.

Alfred J. and W. C. Rickards, Jr., the latter presiding at the piano, rendered popular songs and responded agreeably to recalls frequently, and other superlative factors of the festivities were Robert Angus with his violin, James Cant with the bagpipes and John White with a vocal solo.

President Janeicke made a stirring address setting forth the purposes of the society and its claims upon the support of the horticultural profession, expressing the hope that it might in the near future have a home of its own.

Ex-President A. Mackenzie also spoke interestingly of the Society's work. Charles Lenker responded to the toast "Harmony."

D. McFarlane, W. E. Marshall, V. Cleres and A. V. Kohler made interesting addresses. James Scott gave some of his experiences as a "Drummer." W. Sperling spoke of "The Gardener as I have Found Him." J. Manda responded very happily to the toast, "The Ladies," and B. G. Davis spoke for "The Local Press."

President Janeicke then arose and spoke in commendation of the services to the society of Alexander Mackenzie in the offices of secretary and president and as a testimonial of appreciation thereof, on behalf of fellow members, presented him with a handsome fountain pen. It was a complete surprise to the recipient, and he expressed his thanks reciprocating the good feeling entertained toward him.

S. J. Trepess, chairman of the committee of arrangements, responded to compliments paid it for the admirable manner in which it had performed its duties.

The festivities closed with "Auld Lang Syne."

NEW BEDFORD HORTICULTURAL SOCIETY.

The question box furnished the means for an interesting evening at the February meeting of the N. B. H. S. on Monday. H. A. Jahn was awarded the silver medal of the society for a vase of fifty blooms of his new white carnation Lloyd. The schedule for the fall show was passed and ordered to be printed. The two New Bedford dahlias, Newport and Ruth Forbes, are to be placed in the market this year.

THOS. WHITE.

NEW YORK FLORISTS' CLUB.

The February meeting of this club, on Monday, 10th inst., was attended by about 75 members. Committee reports on several interesting subjects were made. The first was by P. O'Mara on the question of how best to co-operate with the Horticultural Society of New York for the advancement of horticulture, by means of exhibitions, etc. The views of the committee, as presented, were that a merger would be unwise but that the members of the club should individually become members of the Horticultural Society and thus contribute by their influence and support to the activities of the Society. After discussion pro and con the report was adopted and the committee continued. The dinner committee, through its chairman, W. F. Sheridan, made a seductive forecast of the festivities planned for the annual feast on February 29 at the Hotel St. Denis.

The national flower show to be held in Chicago next November was an interesting topic. W. A. Manda urged an enterprising policy on this matter, including the contributing of medals and trophies in the name of the club. Mr. O'Mara suggested the offering of a club sweepstakes prize of \$100. Messrs. Tetty, O'Mara and Manda were constituted a committee to consider and report. At a later hour this committee reported recommending that the club appropriate the sum of \$100 for a silver trophy to be offered for three specimen palms, distinct species, not less than ten feet in height, and under temporary suspension of the rules the proposition was voted affirmatively and the secretary empowered to telegraph Secretary Rudd of the S. A. F. accordingly. John T. Withers then read a carefully prepared and instructive paper, his subject being "The Value of the Shade Tree and Its Care." The paper was given a spirited discussion. The judges on exhibits, Jos. A. Manda, chairman, reported as follows: Violet Princess of Wales, from F. G. Mense, Glen Cove, N. Y.; Cultural Certificate. New Violet Boston, from Wm. Sim, Cliftondale, Mass.; Certificate of Merit. White Carnation Lloyd, from A. H. Jahn, New Bedford, Mass., arrived in bad condition. Crimson Carnation Wa-No-Ka, from Wa-No-Ka Greenhouses, Barneveld, N. Y., 85 points and a certificate. Pink Seedling Chrysanthemum from W. E. Hamilton, Belfast, Me., shown by C. H. Tetty. Thanks of the Club. Pink Seedling Carnation from W. A. Manda. 75 1-2 points. Resolutions of condolence with the families of the late Victor Dorval and Mrs. A. M. Henshaw were passed by unanimous votes.

CHICAGO FLORISTS' CLUB.

The Chicago Florists' Club have secured the Art Institute Hall for the American Rose Society convention to be held here on March 25 to 27. This is an ideal place, being centrally located and, with the Museum of Fine Arts in connection, they certainly could not have got a better spot. A goodly support is expected from the East on exhibits as the premiums will warrant their sending to this show. Any information regarding this coming event can be had of the Chicago

Club Secretary, T. E. Waters, 21 East Randolph street.

TOLEDO FLORISTS IN TIFFIN AND FOSTORIA.

Instead of meeting at the club room hereafter it is proposed that this club meet at the establishments of the different members. The first outing accordingly was on Tuesday, February 9th when a visit was made to Tiffin and Fostoria. The Ullrich place at Tiffin now run by the three sons of the late Lewis Ullrich, has about 75,000 feet of glass, consisting of a number of small houses and a large one of latest pattern, about 40x250 feet. While the roses were off crop, they showed that they have been producing heavily, Bride, Bridesmaid, Perle, Golden Gate and Meteor being the principal. Carnations, especially Boston Market, White Perfection, Enchantress, and Mrs. T. W. Lawson, all looked well. There are very spacious cold storage houses for bulbs and cut flowers and if anybody wants to see a place where every tool and supply has its place and is in its place, he can certainly find it here. After an inspection of the city store, which was opened shortly before Christmas, the visitors were escorted to a hotel, where an elaborate dinner awaited and was gratefully enjoyed. The Fostoria Floral Co. (E. R. Sackett, prop.) was next visited. This plant has about 60,000 feet of glass and Mr. Sackett is getting ready to put up four more houses of respectable size. The material has been ordered and the intentions are to start within a few weeks and have the houses planted by June with roses. Specialties are roses and carnations and we doubt if better flowers are grown anywhere. As to carnations they show the finest Enchantress this season and the other varieties are equally good. Refreshments, of course, were served and we departed with regret.

There is no question of the great benefit of such visits. Buyers and sellers get closer together and good fellowship among all is the result.

J. L. SCHILLER.

FLORISTS' CLUB OF WASHINGTON.

The monthly meeting of this club, on February 4th, was of special importance, being the night for the nomination of officers for the ensuing year. President Bisset declined to succeed himself, though it was the expressed wish of the entire club that he should do so. The following were nominated: President, Z. D. Blackstone and F. H. Kramer; vice-president, John Robertson and Geo. Shaffer; secretary, Chas. McCauley; treasurer, Wm. F. Gude; directors, Chas. McCauley, W. H. Ernest and James L. Carbery. Judges, John Robertson and Chas. McCauley. The election will take place at the March meeting. The secretary read letters received from Mrs. Hauswirth and John Clarke, each expressing appreciation of letters of sympathy received by them during their recent affliction. Peter Bisset exhibited two vases of his new seedling roses, Rosalie, which scored 84 points and an unnamed pink seedling which scored 87 points.

NEWPORT HORTICULTURAL SOCIETY.

At the last meeting of the Newport Horticultural Society the executive committee presented a schedule of premiums for a Rose Show to be held in June. In making up the schedule the committee took into consideration the prevalent desire to have a large general exhibition in mid-summer for which considerable funds would be absolutely necessary. These considerations had the effect of inducing the committee to eliminate certain classes, believing that with such an elaborate show in prospect for a later date the classes they thought advisable to strike out of the schedule for the June show would be better represented and filled as well as tending to still further emphasize the importance of the larger general exhibition. The society fully approved all the recommendations of the committee and adopted the schedule as presented.

Alexander McLellan read a paper on plant nomenclature in which he laid particular stress on the desirability of a strict observance of the justly recognized names of plants and the importance to horticulture and horticulturists of an increased knowledge of plant names, both botanical and common. Plant registration received its due share of attention from Mr. MacLellan in his paper, being as he said of sufficient importance to be placed in charge of the Dept. of Agriculture. The charge now made by the Society of American Florists for the privilege of registering a plant Mr. MacLellan considered unjust because for one reason it was of discrimination, in so far that members of the society were exempt from such charges which in his opinion was not what might be expected from a national society. The paper was well received, and a vote of thanks was awarded to Mr. MacLellan.

Robert Cameron of Harvard Botanic Garden will be the essayist at the next meeting, Feb. 25. Mr. Cameron in his paper will discuss Annuals and Biennials.

HUNTINGTON HORTICULTURAL AND AGRICULTURAL SOCIETY.

An interesting State Farmers' Institute was held on February 3 under the auspices of the H. and A. Society. Good speakers were present and there was a gratifying attendance. Up-to-date methods were discussed and helpful hints given on many agricultural topics.

The annual carnation exhibition of the society will be held on February 25 in the Trade School Building. There are classes provided for carnations, 25 in each class, violets, mignonette, freestias, spring bulbous flowers, greenhouse vegetables, etc. Competition will be for certificates. Schedule will be sent on application to A. H. Funnell, secretary, Huntington, N. Y.

EXPERIMENTS IN CARNATION GROWING BY THE U. S. DEPARTMENT OF AGRICULTURE.

Read before the American Carnation Society

Dr. Beverly T. Galloway, Chief of the Bureau of Plant Industry, in his address before the Society called attention to the experiments and tests of various kinds connected with the growing of carnations which have been carried on by the Department of Agriculture for several years. He stated that the work had for its object the securing of information on the following points:

1. The relative yield and vigor of plants grown under glass all summer as compared with plants of the same variety grown out of doors during the summer season and moved to the benches in the usual way and at the usual time.
2. Fertilizer tests to determine the value of different fertilizers alone and in various combinations on vigor and yield.
3. A study of hereditary tendencies in so far as same may affect continuous vigor and healthfulness and yield.
5. The securing of new and desirable types by crossing.
5. A study of fundamental questions of breeding with a view to securing data that will be of value to carnation growers and others in the improvement of their crops.
6. A study of diseases and means of preventing the same.

Dr. Galloway took up the subjects in the order given, using a table or chart large enough to be seen by all present, to illustrate the results of ex-

AGRICULTURAL DEPARTMENT, CARNATION HOUSES
Beacon at Left. Winsor at Right.

periments conducted during the summer of 1906 and the winter of 1907, to determine the relative yield of field and indoor grown plants. He explained how the experiment had been conducted, namely, that plants were propagated from stock of four varieties, care being taken to have the stock of as nearly equal vigor and productiveness as possible. Four benches in the greenhouse were given over to the work, each holding about

1000 plants and the same were planted with stock from 3-inch pots, two rows the entire length of each bench being reserved for the plants grown out of doors. Dr. Galloway stated that the field grown plants were given the usual treatment and produced fair average growth, but were not as large as those grown on the benches when brought in in September.

He stated that the results, as shown by the chart, were, without exception,

very much in favor of the indoor grown plants, in many cases the increase being over 100 per cent. He added, however, that while the results were so strikingly in favor of growing plants under glass the season through, from the standpoint of the Department, other considerations have to be kept in mind, such as the relative cost of the two methods, the production for an entire season, the utilization of the houses for other purposes, maintenance, etc., in determining which method to pursue.

The speaker also used the chart to illustrate his remarks upon the fertilizer experiments which the Department had carried on. He said that this experiment had been planned to bring out, if possible, the fact that growers as a rule are too prone to count on the value of commercial fertilizers in crop production, and he said he believed the results of the experiment would show that there is no fertilizer so good, reliable and sure as well decomposed organic manure—something which could be secured anywhere in the country. He said, however, that experiments of this kind to be conclusive, must be carried on for a number of years in various places. He cautioned the growers to go slow on commercial fertilizers and to put their faith and work into good composts.

He explained the work the Department had been doing in the study of hereditary tendencies in plants in so far as same may affect continuous vigor, healthfulness and yield. He said the question of whether there is true bud variation was still an open one, but that at the same time he did not think the importance and value of careful and rigid selection of stock could be questioned. This the Department has been doing and he stated it was its intention to continue this selective work for several years until the effects could be fully demonstrated.

The speaker mentioned the work the Department had been doing in the pro-

AGRICULTURAL DEPARTMENT, CARNATION HOUSES
Enchantress in Foreground, White Enchantress in Distance.

duction of new types by crossing and referred to some of the crosses that might be seen in the greenhouses.

He said that Prof. Norton, whose talk was to follow his, would explain in detail the fifth line of work, namely, a study of fundamental questions of breeding, which work he stated had been carried on by Prof. Norton before leaving the Department.

Dr. Galloway now took up the sixth line of work that the Department had been conducting, namely, an investigation of the diseases of carnations. Among the diseases studied was the wet stem rot, due to *Rhizoctonia*, which, he stated, continues to be one of the most serious diseases with which the growers have to contend, but that it could be controlled by growing the plants in well drained and well aerated soil contain-

ing plenty of lime, and by avoiding mechanical injury to the plants. He also mentioned the dry stem rot, a disease caused by *Fusarium*—one of the wilt fungi, and stated that the only remedy for this disease was to use sterilized soil and the liberal use of acid phosphate.

Two other diseases to which attention was called were the *Macrosporium* spot, which he said could be prevented by spraying with Bordeaux mixture, and the Bacterial spot, a disease occurring only in wet seasons on the softer-leaved varieties. This disease he stated might be controlled by light syringing with a mixture of two parts commercial formaldehyde to 1000 parts water.

Dr. Galloway closed his remarks by assuring the Society that the Department was always at their service and with an invitation to its members to visit the Department greenhouses.

HORTICULTURE'S REPRESENTATIVES.

The following named gentlemen represent this paper in their various local districts, and are authorized to accept subscriptions, advertisements and news items:

BUFFALO, N. Y.—E. C. Brucker, 385-87 Ellicott St.

Seed Trade

The Canners' Convention of 1908 has passed into history, and in all essential respects, excepting in the matter of the machinery exhibit, it will compare favorably with any of its predecessors. Owing to lack of floor space it was impossible to make the machinery part of the convention as large or attractive as last year, but this feature has become so large that it requires a hall of unusual dimensions to accommodate it.

The social part of these conventions, and in fact of all conventions, was a notable feature of the one just closed at Cincinnati. At the time of the Milwaukee convention in 1902 some ten or a dozen congenial spirits formed a little social organization known as the Ramblers, the object being to give a dinner to a chosen few of their friends. This organization has grown until at the recent convention the Ramblers and their guests numbered over 100. The entertainment usually consists of a dinner beginning rather late in the evening, followed by speeches by the leading Ramblers and their guests and winding up with a vaudeville performance, of more or less startling character. It is a decidedly Bohemian affair, yet withal quite elaborate, and invitations to the Ramblers' dinner are eagerly accepted by the most prominent members of the canning industry.

Contrary to custom, the place for the next convention was decided before the last one closed, the place chosen being Chicago. The windy city had some hustling representatives there who offered such attractive inducements that the canners were quite readily won over to their cause. One of the features of this next convention will be a Pure Food Show in connection with the machinery exhibit, and according to present plans the convention will be held at the Coliseum. The great size of this building with its several halls enables the committee having the matter in charge to conduct the Pure Food Show as a part of the exhibits without in any way interfering with the necessary space for the machinery and supplies association. By the way, this machinery and supplies association, which has heretofore been a rather loose-jointed affair, and which owing to its rapid growth has been becoming more unwieldy each year, has now been incorporated and hereafter will be controlled by a board of directors, its officers being a president, vice-president, secretary and treasurer. The constitution and by-laws adopted may be changed to suit conditions which will no doubt develop in the future, but it will be a much more compact and manageable organization than it has become of recent years.

As predicted in a recent issue of HORTICULTURE, the price of seed peas and seed corn, both had a sinking spell during the progress of the convention. This alludes only to spot goods, although in the scramble to secure business there was some drop in the price of futures. One fact was developed, however, to the satisfaction of everyone, and that was the scarcity of the Sweet Wrinkled varieties of canners' peas, proving the accuracy of the

statements made on this point in recent issues of HORTICULTURE.

There has been a decided drop in the price of onions within the past few weeks, and this will undoubtedly have a very undesirable influence on the demand for seed for the coming year, and it begins to look as if there would be some surplus at the end of the season notwithstanding the great shortage of last year's crops. It is pleasing to note that two or three of the members of the seed trade who have heretofore been hangers-on at the canners' conventions, refusing to join the association or contribute to its maintenance in any way, have finally decided this year to become members, and they are welcomed by all, including their competitors. It is only fair to say, however, that one or two still persistently refuse to come in, one of these being a very prominent grower who attracted universal attention by his tireless bustling for business. Possibly even this man may appreciate the humiliating position he is in, although thus far he has been impervious to criticism.

The California seed growers are on the wing and this week A. J. Pieters visited Chicago and Detroit on his way East. It is also reported that Charles P. Braslan is heading East in the wake of his friend and colleague and many of the others will undoubtedly follow them shortly.

J. S. Nave and E. W. Moore have started in the seed business in Owensboro, Ky., with E. O. Miller as manager.

CATALOGUES RECEIVED.

Kramer Brothers Foundry Co., Dayton, O.—Illustrated folder of Lawn Vases, Settees and Chairs.

F. E. Conine Nursery Co., Stratford, Conn.—Spring and fall 1908 Catalogue of Nursery Stock. An excellent selection.

ely list and the W. & D. Leviathan Mignonette forms an attractive cover illustration.

H. H. Berger & Co., New York.—Spring Catalogue for 1908. A characteristic Japanese scene forms the introductory cover topic. A large number of novelties in flower and vegetable seeds is included. Also Wholesale Catalogue for the trade only, listing many Japanese specialties

R. & J. Farquhar & Co., Boston, Mass.—Garden Annual for 1908. In style, arrangement, contents and illustration this catalogue stands in the front rank. The cover illustrations—Trollius Japonicus Excelsior and Tritoma hybrida Express—are fine examples of color work and the half-tones which enrich the descriptive pages in great profusion are most of them now used for the first time. The pages are noticeable for their conciseness and ease of reference, and the absence of superfluous verbiage. Vegetable and flower seeds and plants, bulbs, perennials, ornamental trees and shrubs and garden accessories are all fully covered.

Reports from those growers who have forced Formosa lilies during the past season show that good results have been obtained and that these bulbs have won approval for their healthiness and uniformity.

PLANT IMPORTS.

There were entered at the port of New York during the two weeks of January 22d to February 5th, inclusive, the following plants, etc.:

Via Rotterdam: W. Elliott & Sons, 50 bgs. grass seed; Maltus & Ware, 4 cs. flower roots, 14 bls. seed; J. P. Roosa, 24 cs. flower seed; Vaughan's Seed Store, 1 cs. plants.

WASHINGTON STATE HORTICULTURAL ASSOCIATION.

Spokane was selected as the convention city for the fifth annual meeting of the Washington State Horticultural Association, which closed its three days' session at Walla Walla, Jan. 29 to 31, by the election of these officers for 1908:

President, H. M. Gilbert, North Yakima; first vice-president, A. F. Crowell, Spokane; second vice-president, H. Horan, Wenatchee; treasurer, William Ritz, Walla Walla; secretary, Levi G. Monroe, Spokane.

These prizes were awarded by the Walla Walla Fruit Growers' Association:

For best 10 boxes of apples packed for market variety, Yakima County Horticultural Society; for second best 10 boxes in the same class, Chelan County Horticultural Society; for best plate display, Spokane County Horticultural Society; for best box of apples, any commercial variety, Freewater, Ore.

The sessions took place in the Young Men's Christian Association rooms, where Mayor Kellogg of Walla Walla welcomed the 400 delegates and fruit growers from various parts of the state, the reply being by Prof. Cyrus L. Smith of Spokane, who was happy in his remarks, thanking the Walla Walla growers for their welcome and entertainment and arrangement of details. Following the annual address by E. L. Stewart, president of the society, F. A. Huntley, state horticultural inspector, in reviewing the fruit horticultural interests of the state, advocated some legislation to eliminate the multifarious handling of products by dealers, with its consequent profit. This was followed by an informal discussion.

C. L. Whitney, inspector of Walla Walla county, discussed "Fruit Growing in the Walla Walla Valley: Past, Present and Future." He was followed by J. M. Brown of North Yakima, who delivered a technical address on pear blight. He said in part:

"The most practical and the only sure preventive of this disease is to amputate the limbs from one to three feet below the least signs of any blight, and in this way get below the effect of the germ. The limbs cut off should be burned and the tools used in cutting the trees dipped in disinfected water to kill any germs that may be on them." This was followed by a general discussion.

Horticulture and Education.

Hon. Stephen B. L. Penrose, president of Whitman College at Walla Walla, delivered the principal address of the day, speaking on "Horticulture and Education." He said in part:

"I wish to offer some suggestions in the business of education, which is as much your business as it is mine. Every man should have at least one

son better than himself, and every woman should have one daughter better than herself. The man who does not advance the next generation makes a failure of his life from an evolutionary point of view, despite the fact that he might have attained success as a money-getter, a business man or a benefactor to the human race. What we need is that you men who believe in doing things in the best possible way should revive the art of fatherhood; that you should understand the seriousness and the sacredness of your obligation to the next generation.

"When it comes to the education of your children by other people I would suggest that you bear in mind three lessons. First, you should insist on training and experience in the teachers you employ; second, you should insist that the education should be conducted in a scientific fashion; third, you should bear in mind your own experience in the matter of fruit-raising, that you must spend money freely. If you wish your children to attain a maximum development, you must be willing to invest as much in their education as you would in your orchard, barn or cattle."

"The Canning Industry" was discussed, following a paper on the subject by J. B. Moran of North Yakima, after which R. Freeman, editor of the Northwest Farm and Home, North Yakima, spoke at length on "The Relation of the Honey Bee to the Orchard." This was followed by a discussion.

The second day's session included papers on "Natural Cultivation," J. F. Littooy of Wenatchee; "Orchard Care and Cultivation," C. L. Smith of Spokane; "Conservatism and Diversification in the Orchard," L. R. Freeman of North Yakima; "Spraying for the Codlin, Growing and Marketing," J. L. Dumas of Dayton; "Association Work and the Commercial Value of a Good Pack," E. H. Shepherd of Hood River, Ore.; "Fruit Handling," C. E. Nosler of Walla Walla. These papers were discussed at length.

Prof. W. S. Thornber, horticulturist of the Washington State College at Pullman, opened the program the last day with an address on general matters, which aroused a discussion. He was followed by Dr. J. Hedger of Kiona, with a talk on "Fruit Culture"; J. A. Rose of Kennewick, spoke on "The Cultivation of the Early Strawberry," and there was a general discussion, led by M. N. Richards of North Yakima, and A. J. Linville of Wenatchee on general association work. Prof. J. O. Jayne, irrigation investigator of the United States Department of Agriculture, also talked on "Practical Irrigation."

Following this the officers were elected for 1908 and Spokane chosen for the meeting in January, 1909, when the Spokane County Horticultural Society, of which H. W. Greenberg is president and L. G. Monroe, secretary, will give what promises to be the larg-

est and most important apple exhibition on the continent in the Spokane armory, which has a seating capacity of 5,000. The Spokane Chamber of Commerce, of which Frederick E. Goodall is president, has guaranteed cash prizes aggregating not less than \$1,000 in addition to trophies and ribbons for the winners in the various classes, which will be open to every grower in the State of Washington.

Secretary Monroe said on his return to Spokane from Walla Walla:

"The fourth annual meeting of the state society was the best attended and most interesting in the history of the society. We have in the neighborhood of 500 members, of which 155 are in Spokane county, and there is every reason that the first mentioned number will be increased to 1,000 before the end of the year.

It is also purposed to bring the convention of the National Irrigation Congress to Spokane in 1909. The Spokane country delegation to the meeting at Albuquerque, N. M., in September, will include 100 growers from various parts of the Inland Empire, who will take with them a train load of fruit grown in this part of the Pacific Northwest. Charles B. Reed is originator of the plan, which will be carried out by Martin J. Wessels of Spokane.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

National Flower Show Special Premium Offers.

John Breitmeyer's Sons, Detroit, Mich., offer \$25 first, \$15 second, for best fifty blooms of La Detroit rose.

Conard & Jones Co., West Grove, Pa., cash, premium not yet specified, \$25.

F. Dorner & Sons Co., LaFayette, Ind. Fifty bloms Winona carnation, first \$12, second \$8, third \$5.

Samuel Murray, Kansas City, Mo. Best six plants Cibotium Schiedei, not over ten inch pots, \$50.

John Young, New York. Cash, \$50; premium not yet specified.

W. N. RUDD.

Chairman Premium Committee.

PASADENA GARDENERS' ASSOCIATION.

The success of previous shows has encouraged the Pasadena Gardeners' Association to hold a Spring Flower Show on April 2, 3, 4, 1908, on a much larger scale, as everything looks bright and promising and there are many good and new things in the Floral Kingdom to draw from. The committee appointed to take charge of the arrangements is composed of Robert Pegg, chairman, Richard Thomas, secretary, John Blake, Otto Heutehey, Robert Kroll, A. T. Hanson, G. F. Neillsson, J. McGilvaray, G. Sawyer and Paul Janock. H. E. GEORGE.

CLUB AND SOCIETY NOTES.

The Louisiana Horticultural Society will meet at Minden February 20-22.

The Floral Society of New Orleans has disbanded and turned its fund in to the Horticultural Society.

The North Shore Horticultural Society will hold their rose and strawberry show on July 1; the summer show on August 26-27.

Pres. Kenyon L. Butterfield will address the Worcester County Horticultural Society, Worcester, Mass., on February 20 on rural progress.

The Tennessee Nurserymen's Association at their convention in Nashville, February 1, chose Frank McCord of Nashville, president; G. M. Bentley of Knoxville, secretary.

John Dunbar, Rochester, N. Y., will address the Massachusetts Horticultural Society, Boston, at their hall, on the 15th inst., at 11 a. m.; subject, "Hardy Conifers for Private Grounds."

The Wisconsin Horticultural Society at its annual meeting in Madison on February 4, elected R. J. Coe of Ft. Atkinson president, and Prof. F. Crane-field of Madison secretary, for 1908.

The Tennessee Horticultural Society at their annual meeting at Nashville elected the following as officers for the coming year: Pres., R. A. Wilkes; Secy., Charles A. Keffer, Knoxville; vice-pres., W. H. Fox, J. W. Garrett, W. P. Wade.

The Connecticut Pomological Society convened at Hartford on February 5 for a two days' session. The treasurer's report showed a good balance. Notable speakers presented papers on topics of interest to both grower and consumer. The laws concerning packing and shipping of fruit were discussed at length.

PERSONAL.

We are sorry to learn that Secretary John Young, of the New York Florists' Club, has sustained a fracture of the arm, caused by a fall on the ice.

Visitors in Boston: G. E. Baldwin of Carrillo & Baldwin, Secaucus, N. J.; Timothy McCarthy, Providence, R. I.; H. F. Littlefield, Worcester, Mass.

INDOOR CULTURE OF CARNATIONS.

Read before the Florists' Club of Philadelphia Feb. 4, 1903, by Esmond A. Harvey.

There is probably no cut flower of which the methods of culture have changed more in the past six or seven years than the carnation. When we began growing carnations, six years ago, we benched from the field about the middle of September, as this was the universal custom among Chester County carnation growers, and generally so throughout the United States, although some of the large growers around New York were practicing early planting. Now, from the middle of July to the middle of August is generally conceded to be the proper time to house from the field.

Indoor Culture.

The next development would naturally be indoor culture exclusively. To the writer's knowledge the first grower who practiced this method to any extent was Mr. Chas. W. Ward of Queens, L. I., who has always been a leader in the development of the "divine flower." I well remember seeing in 1903 at Mr. Ward's range a house of Enchantress that had been grown inside over summer and was struck with amazement at their magnificence. I do not think that I have ever seen them surpassed by any variety.

To succeed with indoor culture, strong, healthy cuttings should be put in the sand not later than February first; those potted up before February fifteenth are preferable. We first use two-inch pots, and when these are well filled with roots, plant in a bench four inches apart each way. Some growers again repot from three to four-inch pots and hold them in these until they are finally planted in the benches. When many plants are grown this method makes a great deal of work in watering, as the pots dry out very rapidly when it comes hot weather, and the young plants are also liable to become pot-bound before the benches are ready for them. When their growth is once stunted they are practically useless. At each transplanting all the weak plants should be set aside. A weak cutting may recover in the field but will never pay for itself grown inside.

As soon after Decoration Day as possible the old plants should be thrown out, the houses refilled with a good, rich compost and the young plants put in their final place.

Care in Summer.

Care must be taken with the watering. There is not much danger of over-watering in summer, still the benches should not be allowed to become soggy; far greater danger is in allowing the soil to get too dry. As soon as it begins to appear a light color on top it should be wet thoroughly, otherwise the plants will become hard and woody, and will not break freely. Although it is generally advised against shading, we believe a light shade is beneficial, and put a thin coat of whitening on every other row of glass about the first of July, and remove it early in September. This will aid materially in keeping down the temperature and will not cause a weak growth unless the plants are over-watered.

Full ventilation should be given

both day and night, except when a strong dry wind is blowing immediately on the plants, which dries out very rapidly both plants and soil, and is very likely to bring on an attack of red spider. This insect is about the only one that will cause trouble in the summer and a thorough spraying with cold water twice a week will, we have found, keep down this pest. Should they appear, however, the plants should be sprayed every day until they are clear, as the spider will cause a great deal of damage in a very short time, from which it will take a long time for the plants to recover.

Pinching.

The same care should be taken in pinching as in the field. Do not break back too high as this will cause a top-heavy growth, and the plants will be broken up by the spraying. As soon as the shoots begin to elongate and show the stem between the leaves, the top should be taken out, leaving three or four joints. Do not leave the plants two or three weeks and then break off all the shoots at once, but go over them every week, topping all the longest ones. This will make a more even growth and lessen the tendency toward cropping.

The benches should be frequently cultivated during the summer, both to keep down the weeds and to prevent the surface of the soil from becoming hard and baked.

Feeding.

If the soil was well fertilized with cow manure and bone meal before it was put in the benches, no feeding will be necessary during the summer. Through the fall we use top dressings of bone meal and sheep manure every two or three weeks, omitting all feeding through December. In January when the days become longer and we get more sunshine, we use a stronger and quicker-acting commercial fertilizer. Feeding with liquid manure would doubtless be beneficial, but we have never used this method.

If by the first of July the plants in the houses are as large as those in the field, you may consider that you have been successful, for, although through July and August the field plants will make a faster growth than the indoor stock, these will catch up later. There is always some check upon plants benched from the field, and often it is very severe if the conditions are not right. This is especially the case in a wet season.

Advantages of Indoor Culture.

One of the greatest advantages of indoor culture is the fact that we have control of the watering, and this is especially important since stem-rot has made its appearance. How often does it happen that half of the plants die

in the field and again half of those remaining, after they have been planted in the houses, and it is nearly spring before we begin to cut good flowers. With proper indoor culture the ravages of the dreaded stem-rot are reduced to a minimum. Another advantage of this method is that large flowers with long stems can be cut early in the fall, when they bring good prices and when none of the profits go into coal bills. A steadier cut is also assured through the winter, and the danger of getting a heavy crop, when prices are low, is diminished.

Some varieties are undoubtedly better suited to indoor growing than

others. As a rule, the broad-foiled, strong growing kinds are best adapted to it. Mrs. Lawson and Winsor are notable examples; in fact, we would not attempt to grow them any other way.

Some Considerations.

The greatest objection offered to indoor culture is the fact that the June cut is lost. However, at this time carnations bring very low prices, and after all the problem is how to make each square foot of bench surface produce the most money. If we can make the returns through the fall and winter more than cover the loss during the summer by indoor culture we are foolish not to adopt it.

It is not urged that this method is an easy way to success in carnation growing. It certainly will not help that grower who is used to letting the plants take care of themselves. A little neglect is far more disastrous to indoor stock than to plants in the field.

Worth Trying.

I should not advise anyone to change their whole plant immediately from one method to the other, but first try a house or at least a bench, and prove for yourself which way is the better under your conditions. Some of the largest and best growers in the country practice indoor culture exclusively, and many others in part of their plant, and they certainly would not do so if it did not pay them. When any new method of doing things is taken up by the leaders in the trade, we owe it to the success of our business to at least see for ourselves whether there is anything in it; otherwise, we shall soon be bringing up the tail of the procession.

THE FLORISTS' SUPPLY HOUSE OF AMERICA

Without a rival in knowledge of the requirements of the trade and the ability to supply them. Our New Illustrated Catalogue, recognized as a work of art unprecedented in its line for variety, novelty and completeness, tells the story fully, and if you have not yet sent for it, do so now.

'TIS FREE TO EVERYBODY IN THE TRADE

H. BAYERSDORFER & CO., 1129 Arch St., Philadelphia, Pa.

FLOWER MARKET REPORTS

BOSTON The wave of overproduction and accumulation of flowers has reached Boston with full force and conditions in the wholesale flower trade are unprecedented for this date. Compared with one year ago, values on many things are reduced 50 to 75 per cent., and the demand has shut down in all directions. Carnations and violets are now in the same predicament in which the bulbous stock has been traveling for some weeks. The latter is offered at unheard-of prices but buyers are not to be found even then.

A week has just passed **BUFFALO** that was very unsatisfactory to the grower, wholesaler and retailer, trade being simply at a standstill. The thermometer registered around the "zero" mark and the heavy fall of snow caused no little annoyance, and the shop window decorations being frozen up could attract no attention toward a sale for a blooming plant or spring flowers. It was a matter of the wholesaler carrying all the supply until the retailers were thawed out, the same being heavy and mostly in the carnation line. In the rose line the Beauty is not over-abundant but enough to fill all orders. Lilies and callas are plentiful, and lily of the valley sales are again on the quiet side. All bulbous stock, violets, peas, etc., are in good supply.

Business for the past **CHICAGO** week was very dull; in fact, the retailers assert they could not recall a poorer week at this time of the year. Roses are still quite scarce but other flowers are in abundance. This being Valentine's week, it should make a better showing, especially on violets. The warm spell will have a tendency to bring in a flood of bulb stock which is now almost a dead weight on the market. Good roses retain their prices but carnations have taken a decided drop.

Trade conditions **INDIANAPOLIS** for the past week were fair only. With no social affairs to look forward to, the future does not seem especially bright. Bulbous stock is coming in a little stronger now, daffodils selling the best. Owing to the cold weather the rose crop is off a little.

The cut flower market is badly demoralized, values being without stability on any line and the demand being totally inadequate to make impression on the heavy shipments of every sort of material. It would be useless to specialize, for all varieties and all grades are in practically the same predicament and the prospect for relief is exceedingly unpromising. The combination of slack demand and overproduction as at present existing is unprecedented for the month of February in the experience of the dealers here who are put to their wits' end to find an outlet for the accumulation.

The less said **PHILADELPHIA** about business the better. To repeat the remarks of the managers of the various whole-

sale markets, or of the leading retailers, would border on the sacrilegious. While everything was in over supply and demand at a minimum, still there was a silver lining to the cloud here and there. Flowers for funeral work, and these include quite a large line, roses, carnations, lily of the valley, stevia, lilies, and so on, were active as usual, although at lower prices. American Beauty roses sold fairly well, and these were never so fine nor so abundant before. It is estimated that the area under cultivation on this rose in this vicinity doubled last season. That, and the sunshiny weather has put the American Beauty within the reach of all this year and as its greatest perfection. Druggy and druggy are two excellent words to size up the situation on the balance of the market. The commission man now has to work four times as hard to move the stock, but he does not get four times as much for his labors. A scientific sliding scale adjustable to the service performed, high and low markets, might be in order.

FIRE RECORD.

The three violet houses of J. Todd of Poughkeepsie, N. Y., were destroyed by fire on January 29. The loss is estimated at \$3,000.

Fire which started from overheated pipes in the boiler room destroyed one house and contents belonging to G. H. Arnold, Braintree, Mass., on February 6. Loss about \$3,000.

A fire at the greenhouses of Henry P. Wagner, Mt. Vernon, N. Y., on February 5, caused a loss of nearly \$7,000, which is partially covered by insurance. Rapid work by the firemen saved two of the houses.

INCORPORATED.

Mitchell & Co., Waterville, Me.; G. A. Mitchell, F. E. Mitchell, G. E. Terry; capital, \$30,000.

Alki Floral Co., Seattle, Wash.; H. R. Anderson, J. R. Justice, E. O. Larson; capital, \$1,500.

Palisades Nurseries, Sparkill, N. Y.; Angus McGillivray, J. M. Stevens, James Cochran; capital, \$15,000.

The Satsuma Co., Newark, N. J.; M. C. Lefferts, D. G. Maynard, J. R. Lefferts, H. C. Hulbert, J. W. Plume; capital, \$150,000.

The Leedle Rosary Co., Springfield, O.; C. C. Leedle, C. P. Brunner, H. J. Roth, M. M. Livingston, James Sagar, Arthur C. Leedle will be manager of this new company.

BUSINESS CHANGES.

R. A. Betz, wire worker, Cincinnati, has moved to 128 E. 3rd street.

Henry Barton, florist, Westfield, Mass., has moved to 58 Elm street.

LEADING RETAIL FLORISTS—
Index by Towns will be found in
Buyers' Directory.

PHILADELPHIA NOTES.

The growers here are figuring on getting their coal cheaper on new contracts. The shut down on industrial activity has caused a large accumulation, and even the iron-clad coal monopoly is loosening up a little, rather than carry dead stock over to next winter.

The curbstone flower merchants were banished from Market and Chestnut street only—and the oft-recurring spasm of the authorities to enforce this edict of years and years ago lasts but a short time. At present there are plenty of these humble merchants to be seen on the two prohibited streets when the weather is mild.

Lord & Burnham Co. through their Philadelphia agent, D. T. Connor, have secured the contract for a new addition to the establishment of Stephen Mortensen, Southampton, consisting of one house, 43x265 ft. Mr. Mortensen intends to grow in same the new rose Mrs. Jardine. He has made a great name during the past twelve years as a grower of Bride and Bridesmaid roses.

If the supposed-to-be pure and spotless governments of the cities of Boston and Washington have been guilty of the petty graft of using plants and flowers for private purposes at public expense what about the airs those superior burghs put on when speaking of Philadelphia? No such graft as that has ever been heard of in the Quaker City.

Chas. F. Krueger, the Reading-terminal florist, is sending out a souvenir postal card to his customers, illustrating the interior and exterior of his place during the holidays. This is good advertising and quite in line with the up-to-date methods of this successful retailer.

In ordering goods please add, "I saw it in HORTICULTURE."

THE AMERICAN ROSE SHOW IN CHICAGO.

In addition to what are already pub-
lished the following prizes have been
sent in for the exhibition in March:

Kroeschell Bros. Co., Chicago, \$10
in gold for the best vase of 50 blooms
of Killarney; \$10 in gold for largest
exhibit of Hybrid Perpetual roses in
pots. Vaughan's Seed Store, cup, value
\$25, will announce later what for.
Weiland & Olinger, \$10 for 50 Chate-
nay. H. N. Bruns, Chicago, \$10 pre-
mium, Society to choose class. Poehl-
mann Bros. Co., \$50 cash for best 100
pink roses and \$50 for best 50 red
roses (Beauty and Richmond ex-
cluded). Frederick C. Newbold, offers
a cash prize of \$10 for the best display
of white roses. Emil Buettner, Park
Ridge, Ill., cash prize \$25.

We have this from the Chicago Flor-
ists' Club: Be assured that you will
find our Chicago boys will be on hand
in good style for the Rose Show, but
we want you to make an effort earnest-
ly and vigorously to get pledges of
attendance and exhibits from every
leading grower east of the Allegheny
Mountains. Chicago will take care of
the rest. Now men of the east, do you
hear the call? What shall the answer
be. We are coming. O! Chicago! with
our "Jardines" and our "Smiths,"
"Wyndmoor," "Beatrice" and hosts
more beside, "Simpson and his Rich-
monds," "Burton and his Beauties,"
"Elliot and his Killarneys," "Pare-
wald with his Liberty."

New Jersey sends the answer "Dinna
ye hear the Slogan! the Campbells are
all coming."

All intending exhibitors are request-
ed to send word to the secretary.

BENJAMIN HAMMOND,
Sec. Amer. Rose Society.

NEWS NOTES.

E. B. Hutchins is proprietor of the
New Floral Co., Bangor, Me.

A. F. J. Baur and Mr. and Mrs. John
Bertermann have returned to Indian-
apolis from the Carnation convention.
Preparations are already begun in that
city for the meeting of the carnation-
ists in 1909. The Indianapolis florists
will visit the Richmond florists on
February 15, and it is hoped a strong
delegation will turn out as it is sug-
gested that the Quaker brothers have
something interesting to communicate.

lilbs, one and two years old, for R. C.
Carnations or Geraniums. W. J. Kings-
bury, Derry, N. H.

Is Your Name In The Above
List? If Not, Why Not?

Obituary

J. B. Heiss.

News of the death of this leading florist of Dayton, O., on Friday, January 31, reached us too late for publication in our issue of last week. To us as to a host of other devoted friends it came as a great and very sad shock. Ever since his return from Europe last fall, Mr. Heiss has been suffering intermittently from rheumatism, but was apparently quite well when he started on Tuesday on a visit to relatives at Bethel. He was taken ill on the train and grew steadily worse until Friday, when the end came.

Mr. Heiss was in his 54th year. He was born in Frankfort, Germany, and came to Dayton some twenty-five years ago. He was florist at the Dayton state hospital for a number of years, and some twenty years ago entered the florist trade, and from a small beginning built up a fine business.

Eighteen years ago he married Miss

J. B. HEISS

Clara Ruchhaber of Dayton, who survives him. Mr. Heiss was a member of the Society of American Florists and served as state vice-president for Southern Ohio last year. As president of the Dayton Florists' Club at the time of the visit of the National Society to Dayton he rendered conspicuous service and the success of the convention was due in no small degree to his earnest, persistent, untiring zeal and industry in the preparatory work and during the stay of the visitors in his city, many of whom will never forget his free-hearted hospitality.

"Friend after friend departs;
Who hath not lost a friend?
There is no union here of hearts
Which hath not here an end."

William J. Allan.

William J. Allan, only son of William Allan, gardener to Dr. Jacobs, and himself an assistant to John T. Allan at the Drexel estate, Newport, R. I., passed away as a result of an illness caused by appendicitis on Feb. 4. William J. Allan was a deservedly popular young man and a bright future seemed in prospect for him. His tak-

"SCALECIDE"

HAS MADE SPRAYING EASY THEN WHY NEGLECT YOUR TREES?

The N. Y. Herald, November 17, '07, says: "The chances are about a hundred to one that you have the San Jose Scale on your place and do not know it," and advises the use of "SCALECIDE." This is good advice. "SCALECIDE" has been tested and tried, and found thoroughly effective. The same yesterday, to-day, and all the time. One gallon makes 15 to 20, ready to use, by simply adding water.

Prices: 1 gal., \$1.00; 5 gal., \$3.25; 10 gal., 6.00; 50 gal. bbl., \$25.00, F. O. B. our factory. Order to-day. Write for booklet Wand free sample.

B. G. PRATT CO., Mfg. Chemists,
11 Broadway, New York City.

ing away in the full vigor of budding manhood, where in his own home life and in the affectionate regard of everyone who knew him all was brightness, has cast a shadow dark and lingering. Much genuine sympathy is expressed for his young widow and his father and mother and sister. He was only 24 years of age. D. M.

Numa Reid Cook.

Numa Reid Cook, born June 25, 1878, died at the home of his sister, Mrs. G. S. Boren, Pomona, N. C., January 29, 1908. Mr. Cook's first experience in the growing of cut flowers was with the J. Van Lindley Nursery Co. of Pomona. He afterwards held positions with florists in New England, Norfolk, Va., Chester, Pa., and latterly with the Green Floral & Nursery Co. of Dallas, Texas. He was a young man of honor and ability and much loved by all.

Charles Flunker of Tennessee Avenue, St. Louis, Mo., passed away recently at the age of 73.

Nicholas B. Rowley, florist, of Corn- ing, N. Y., died on February 4. A brother and a sister survive him.

Charles G. Endlich, who for several years was gardener on various private estates in Brattleboro, Vt., died on February 1, aged 64.

Thompson C. Maxwell, a prominent nurseryman of Geneva, N. Y., died on February 3, aged 86. A widow and two daughters survive him.

George R. Paine of Baldwinville, Mass., one of the large growers of hot-house cucumbers in Central Massachusetts, died on February 3 at the age of 67.

James W. Pinchot, father of Gifford Pinchot, chief forester of the government, died in Washington, D. C., on February 10. He was born in Milford, Pa., in 1831.

Patrick Arnold, for many years a florist in Greenwich, Conn., died in that city on February 6, aged 81. He was a trusted employe of "Boss" Tweed for many years.

William Anderson, 74 years of age, for the past twenty years gardener for Mrs. Lewis Tompkins, Fishkill Land- ing, N. Y., died on February 1. A widow and five children survive him.

Harry E. Hobday, an Englishman 25 years old, employed at Budlong's greenhouse establishment, Cranston, R. I., was instantly killed on February 7 while crossing the railroad tracks on his way to work. He leaves a wife and two children.

NEWS NOTES.

J. F. Nellest, Grand Rapids, Mich., who has made a success of raising early vegetables, will add the culture of flowers to his other industries.

W. E. K. Johnson, florist, Allentown, Pa., recently deceased, left his estate valued at \$40,000 to home and foreign missions after the death of his wife.

John Allanach, recently in charge of the Converse estate, Marion, Mass., has purchased the Vose property in that town and will take up landscape gardening and raise flowers for the market.

At the rooms of the American Insti- tute, New York City, on February 12, Dr. E. M. East of the Connecticut Ex- periment Station led in the discussion on the improvement of plants by sporting.

Preparations for the flower show at Los Angeles, Cal., the week of April 6, are going forward on an elaborate scale. George Hand, Dr. A. D. Hough- ton and Fred Gates have the matter in charge.

The park commission of Brockton, Mass., have recommended an expendi- ture of \$35,000 for the coming year; that \$25,000 be expended on Salisbury park; that Keich park be accepted and \$5,000 be spent there and \$5,000 on Perkins park.

The Syracuse (N. Y.) Herald an- nounces that Henry Youell, superin- tendent of The Herald Gardening Club, will gladly give a practical talk on plants and flowers to any school in the evening. His address is 111 Lexington avenue, Syracuse, N. Y.

The Grand Rapids Greenhouse Co. has just been formed at Grand Rapids, Mich., and combines the interests of F. M. Strong, S. J. Perry, E. E. Taylor and Frank Cook, who are among the leading vegetable raisers in that place. In order to provide for additional greenhouses \$165,000 of preferred stock is offered for sale. S. J. Perry is the general manager.

Mrs. Jeannette M. Gilbert of Clay- ville, N. Y., has presented the Utica Public Library with the extensive and valuable collection of ferns which was the property of her late husband, Ben- jamin B. Gilbert. The collection of the late James Constable, which had passed into the possession of Mr. Gil- bert, has also been given to the Utica Library through the suggestion of Mrs. Constable. Mr. Gilbert was an authority on ferns and a frequent con- tributor to botanical publications.

WILLIAM H. LUTTON

HORTICULTURAL ARCHITECT AND BUILDER

WEST SIDE AVENUE STATION (C. R. R. OF N. J.)
JERSEY CITY, N. J.

Have not been established 50 years, but long enough to convince the wide-awake Florist and Gardener that it is to his interest to place his work in thoroughly practical hands.

(150,000 sq. ft. glass erected in 1907 will substantiate this claim.)

And why not? My material is the best that can be secured. My iron frame construction has every modern feature that years of practical experience can embody.

AND THEN THERE IS THE COST TO BE CONSIDERED.

Why not let us take up this important question now?

Then there is the downright practical side of U-Bar houses, the side that means more flowers, or vegetables of finer quality with less care and expense than in any other houses constructed any other way. The reason for this is, in short—*more light*. You see there is no gutter at the eave—no heavy members—the glass is spaced 24 inches instead of 16 inches. Every structural detail has been reduced to the smallest possible point. Still with all this extreme lightness of construction, there is not a more rigid, enduring house made—and it is the U-Bar that does it. The catalog although filled with U-Bar houses, both exteriors and interiors, also shows plans, sections and all the interesting structural details that you like so well to know—Send for it. **Pierson U-Bar Company**, Designers and Builders *U-Bar Greenhouses*, Metropolitan Building, 4th Avenue and 23rd Street, New York.

NEW "My Maryland" ROSE

Best up-to-date commercial rose; read what others have to say about it.

The Gardeners' and Florists' Club of Boston:—A Report of Merit is Hereby Awarded to JOHN COOK For Vase New H. T. Rose No. 294 since named "MY MARYLAND."

Description and points of particular merit: This New Rose has a pleasing shade of Salmon pink. With other essential characteristics of a good commercial Rose fully proven, much may be expected of it. The Committee believes this variety will be especially valuable in the Light Pink Class of Winter blooming roses. Given by the Gardeners' and Florists' Club of Boston this 17th day of December, 1907.

SIGNED: W. N. CRAIG, Secy.

Price 2 and 2½ inch pots, \$25 per 100; \$200 per 1000. Price 3 inch pots, \$5 per dozen.

JOHN COOK, 318 North Charles St. Baltimore, Md.

CARNATION CUTTINGS

We are in unusually good position to supply exceptionally well-rooted, healthy stock. We have such a large quantity of flowering plants that we propagate only from heel cuttings from flowering shoots. Our cuttings are rooted in light, sunny, airy houses, and we are sure will satisfy the most critical buyer. A prominent carnation grower writes, "You seem to be the only firm in the business that knows how to pack stock and have it reach the buyer in good condition, and I have always found your cuttings cheaper than the same varieties from others at much lower figures." While our prices may not always be the cheapest, we certainly can give, quality considered, as good value as, if not better than, is obtainable anywhere.

WINSOR which we introduced last year has proved to be the finest novelty introduced in years. We think it is the most profitable variety grown today, considering its fine color, splendid keeping qualities, and productiveness. When properly grown, it leaves little to be desired, and almost every one succeeds with it.

WHITE ENCHANTRESS the best all-round white carnation, on account of its large size, long stem, earliness, and productiveness. Our White Enchantress, exhibited at the Carnation Convention at Washington, was the only White Enchantress exhibited that received an award.

Strong rooted cuttings, now ready for delivery, from sand \$6 per 100, \$50 per 1000; from soil, \$7.50 per 100, \$60 per 1000.

We offer also **Victory** and **Red Chief**, from sand, \$6 per 100, \$50 per 1000, from soil, \$7.50 per 100, \$60 per 1000. Also **Victory, Melody** and **White Perfection**, from sand, \$4 per 100, \$35 per 1000; from soil, \$6 per 100, \$45 per 1000. **Variogated Lawson, White Lawson** and **Red Lawson**, from sand, \$3 per 100, \$25 per 1000; from soil, \$4 per 100, \$35 per 1000. We can supply, also, **Winona** and **Alterglow** at \$12 per 100, \$100 per 1000.

Buyers will find transplanted stock offered from soil well worth the difference in price

FLOWER SHOW

Park Street Flower Market

SATURDAY, FEBRUARY 29, 1908

THIS, New England's greatest commercial show, promises to excel anything in its class ever held in the United States. An unprecedented aggregation of experts known throughout the country have charge of this exposition. The president and two ex-presidents of the American Carnation Society, and one ex-president of the American Rose Society lend the lustre of their names. The prize list offered is the most comprehensive ever offered for any similar event and insures a display of new and standard varieties never before equalled in America.

A cordial invitation is extended to all growers to attend and exhibit, and to all others interested in up-to-date floriculture to visit this show.

Exhibits from those unable to attend may be sent direct to the Flower Market, care George Cartwright, 1 Park St., Boston, where they will have the care of a competent committee who will see to it that they are staged to advantage.

Exhibition from 11 A. M. to 4 P. M. All exhibits must be staged by 10.30 A. M.

Schedule of prizes and list of committees will be found on another page of this paper.

COME ONE, COME ALL

"Bread from Stones"

This is the sixth in the series of articles upon soluble fertilizers by Mr. Pray. We can supply the preceding contributions on request.

Those who have considered the matter at all must now realize how important is the influence of fineness upon the speed with which even the "everlasting" rocks yield up what stores of plant food they may contain. The grinding to dust of rocks that has gone on for geological ages is the mighty "Mill of the Gods" that has stocked the rich valleys and spread our magnificent deep western soils which are so rich in possibilities for plant life.

Yonder hill-crowning-forest has enormous quantities of potash, phosphates, lime and magnesia. The same for that apple orchard on the rocky slope. Those trees have got their mineral water from those rocks. It can't be denied that somehow they have got a living, perhaps a precarious one, but nevertheless a living has been filched from those hard-featured stones which compose the hill. We can find the "goods" on them. That oak leaf has over 10 per cent mineral makeup.

By fine grinding we have been able to accelerate what takes place slowly under ordinary conditions to such a degree that recent experiments show that feldspar (which may have 10 per cent potash) when able to pass 200 mesh applied to tobacco plants seems to yield up its potash to a large extent. We are not going to make any prophecy until we know more. All this about rocks is no new thing and for years there have been ardent exponents of "Stone Meal Manure." One foreign proponent has come to the onslaught with a club called "Bread From Stones," hence the words above. In his preface he asks, "What Will Fertilizing With Stone Meal Accomplish?"

He says, "It will:

- (1) Turn stones into bread and make barren regions fruitful.
- (2) Feed the hungry.
- (3) Cause healthy cereals and provender to be harvested and thus prevent epidemics among men and diseases among animals.
- (4) Make agriculture again profitable and save great sums of money which are now expended on fertilizers that in part are injurious and in part useless.
- (5) Turn the unemployed to country life by revealing the inexhaustible nutritive forces which, unrecognized, are stored up in the rocks, the air and the water."

There is food for thought in the above, especially as to most granites and feldspars, which are abundant in this part of the country.

The German Kali (German for potash) Trust which imports tremendous amounts of Stassfurt potash salts in the various forms and purities and advertises in proportion hopped up into the air when they heard about potash from granite or feldspar. They have issued a nice little pamphlet all about it and condemn the idea of potash from any such source competing with Stassfurt mines, and the thing is ended once and for all.

As good Americans, we would like to feel independent of even Brother Wilhelm, but we fear granite rocks won't do it. The dream that appeals to the agricultural chemist is a country like New England full of waterfalls and potash in the rocks alongside, for potash can and has been extracted with aid of electricity from fine ground rocks at a much faster rate than water alone would do it. But the German potash salts still hold the field in price. Let us not curse Providence, however, for we have the phosphates in great abundance in the South, and we have hopes that Secretary Root didn't go

to Chile, the home of the nitrate deposits without casting an eye in that direction.

We have tried to start the idea of soluble fertilizers where we first note them and that is in Nature where they are dilute and slow coming, but finally "get-there."

Rudley M. Pray

Art and Nature in Garden Making

WINTER SCENE AT YORK COLLEGE
Sandringham, England.

We are told by the wise people that garden making is an art; they also inform us that this particular art is really an imperfect copy of Nature. This oft repeated statement at once sets me inquiring as to the truth of the remark.

To begin with, much depends on what we mean by "Nature." If we understand by that word merely certain phenomena, subject to fixed and unalterable law, we must admit that man has the power to imitate natural effects or adapt only, but not to create. Thus, all the arts and crafts of modern garden making are but permutations and combinations of natural laws, when we consider their adaptation to the garden, or rather I should say to that part of the garden which is in the immediate vicinity of the home. If, however, we consider that mere utilitarianism does not cover the whole field of our ideas, that we do not exist merely, but strive to obtain peaceful and natural surroundings, then we feel that the restless, unsatisfied efforts of the gardener in whatever way he seeks expression, point to a search for a something of which the visible universe is but the symbol. As a garden at the best is but Nature made more clearly visible to our senses, so it is that Nature can only be understood by those who can read the symbol. The true garden maker, therefore, I say, is not an imitator, but an interpreter.

All people do not see who gaze on the fair work of Nature, with its wonderful balancing of effects and its marvelous blending of colors. Few, indeed, scan it with purged vision. Few can pierce behind the veil, to the throne where Nature sits amid seven-fold splendor. Many people exist in the world to whom the beauty of

flowers and the majesty of the trees appeal in vain. Flowers spring from the ground, live, blossom, and fade away; trees burst into their drapery of green and fade away in regal splendor of purple and gold, but to such it has no meaning. Their eyes are nature-blind and that they cannot see.

The garden maker's function, therefore, is not merely to reproduce for us matchless combinations of color and effect with the various resources at his command. If this were all, his task would indeed be limited. It is his to trace for us the beauty and majesty revealed to us in the world around. Hence the true garden none the less reveals, but also seeks to convey the beauty and sacredness of that which is unseen, and the garden maker is the interpreter or High Priest of Nature.

If I have made myself clear in my deductions as to what is really meant by Art and Nature in garden making I may go still further and give an instance where they exist in perfect harmony with each other. The accompanying illustration depicts a winter scene at York Cottage, Sandringham, England, the beautiful country residence of the Prince of Wales. I would like to draw the reader's attention in particular, to the water effects. You will observe that there is an entire absence of anything which might be called extreme. The mere fact that they are the work of the garden maker and therefore in a sense artificial, does not conclusively prove that they are an imperfect copy of Nature. I should say rather, that the scheme as a whole was an intelligent interpretation of the wishes of Nature. The garden maker has here aspired to something more refined than mere imitation, and I venture to say that he has more than succeeded. He has given us a beautiful outline combined with well balanced effects. Perfect harmony in effect, perfect peace, perfect art, Nature perfect.

"That her fair form may stand and shine,
Make bright our days and light our dreams,
Turning to scorn with lips divine
The falsehood of extremes."

—Tennyson.

North Easton, Mass.

British Horticulture

SOIL INOCULATION

From time to time reports have reached this country with regard to the remarkable results produced by the bacterial treatment of the soil in America. The surprising results obtained were received with some incredulity by horticulturists on this side. These doubts, however, have been dispelled by the successful experiments which have been conducted in this country by Prof. Bottomley. In Scotland an inoculated acre yielded 3,070 pounds of beans, against 1,800 pounds from an acre not inoculated—a gain of 70 per cent. In Leicestershire, half an acre inoculated, yielded 180 stones of peas, against 66 stones from a half-acre not inoculated. Professor Bottomley has gone further than the American experimentors, having evolved cultures for various plants which were never expected to be amenable to the attacks of the nitrogen-fixing bacteria. It was shown that inoculated tomatoes grew more strongly than

those not treated, and ripened their fruits during the past year, while others did not. Strawberries showed an increased yield to the extent of 45 per cent., and came to perfection earlier.

FLORAL NOVELTIES

There is a bewildering array of novelties in the nurserymen's catalogues; a complete list would fill the pages of HORTICULTURE. Amongst the most notable are White Pearl Gypsophila—an improvement on *G. elegans*, the blooms being larger and snowy-white. A miniature-leaved smilax will be found very useful for decorative work. Sweet pea hybridists have been working for a good yellow. Further progress in this direction has been made by the introduction of James Grieve, which is described as a three-flowered sulphur self. From Germany a new Christmas or winter-flowering sweet pea in various tints is being sent out. In recent years a great advance has been made in the size, color and form of the pyrethrums. Lady Godiva is the name of a new double of a pretty, flesh-colored tint. In the single section the new comers comprise *Simpliciter*, bright rose; *Betrothal*, crimson with a white ring around the disc; *Pinkie*, bright pink; *Carmentis*, deep rose; *Cherry*, bright cherry, and others. New introductions of gladioli include *Lady Inehiquin*, orange-salmon; *Mrs. Chatham*, flesh rose violet, striped; *Peace Envoy*, white, orange centre with violet stripe, and *Kelway's Triumph*, crimson-white. In the begonia section we have *Mrs. J. B. Blackmore*, of a taking shade of salmon, and attractive form; *Millicent*, a new shade of rich flesh-pink color; *Purity*, a pure white of ideal form; *King Alfonso*, rich crimson-scarlet, and *Lady Wenlock*, rose-pink.

FRUIT AND VEGETABLES

Santa Claus is the appropriate name given to a pear ripening at Christmas. In shape it resembles a *Beurre Diep* or *Doyenne du Comice*, and the fruit averages from eight to ten ounces in weight. The new culinary peas are numerous. *Sutton's Reading Wonder* is an early dwarf variety, and *Sutton's Incomparable* is a fresh second-early suitable for table or exhibition purposes. *Carter's Advancement* is a new first-early obtained as the result of a cross between *Daisy* and *American Wonder*. A Russian Kale is being offered which has received an award of merit and a first-class certificate after a trial by the Royal Horticultural Society at Wisley. The leaves are rather remarkable in form somewhat resembling a deer's antler, and are of a curious green color. Since the decline in the potato "boom" there has been a falling off in the number of new aspirants for fame. *Daniels' Prince Edward*, one of the few fresh introductions this season, has been obtained as the result of a cross between the *Duke of York* and *The Factor*. It is a second early which has done well in the trials. *Talisman* is a white round main crop potato which is being distributed by a northern firm. A new melon, *Ideal*, is likely to receive the attention of growers. This has been produced as the result of a cross with *Ingestre Hybrid* and *Royal Favorite*. *Fiddler's Model* is the name of a new beet being sent out. It is considered an improvement both in form and quality on the old Egyptian turnip-rooted variety. A great advantage apparently is the early date at which it arrives at maturity.

W. H. Adsett.

Aquilegias

AQUILEGIA COERULEA

Whoever contemplates to plant a perennial border this spring should not omit to reserve sufficient space for an adequate plantation of columbines. Aquilegias rank high among herbageous flowers and are equally attractive in foliage. Not alone their merit as garden ornaments but still more their commercial value, both as plant and cutflower, should induce every florist and gardener to look out for an ample supply. In the New England States aquilegias thrive well in an open sunny position. They have proven eminently useful for natural woody park sections and likewise, now and then, for the rock garden. South of New York I have found it sometimes of advantage to plant them where they are somewhat protected from the hot midday sun rays. When dotted along the outskirts of natural woods it can easily be arranged to let them have some shade during noon hours and thus prolong their flowering season in June.

Among the varieties much favored by Maine summer cottagers are *Aquilegia coerulea* and *A. chrysantha*. The former is the well known mountain columbine, violet blue, with white center. The plant our illustration represents was taken in the Mount Desert Nurseries in Bar Harbor and shows habit of growth and free-flowering qualities to perfection. *Aquilegia chrysantha*, like the variety *coerulea* with spurred flowers, is in color bright yellow.

There are an abundance of other species in cultiva-

tion, many highly attractive and all interesting to the plant lover. Of these I mention the old European columbines, *Aquilegia vulgaris* in pink, white and blue shades. *Aquilegia canadensis* scarlet with yellow center, of medium size is rather odd in appearance. The large flowering *A. glandulosa*, the pure white columbine, *A. nivea grandiflora* and the beautiful mauve blue variety *A. olympica* are all very desirable acquisitions to any garden. If we add to those named the numerous new hybrids of more recent origin it becomes evident that we have at present a rich efficiency both in color and form at our disposal from which to choose.

Richard Roth

Hydrangea arborescens grandiflora

Editor of HORTICULTURE:

Dear Sir:—We accept with pleasure the slight change in the name of the new hydrangea as recommended by Prof. Sargent in the interest of scientific accuracy, and have notified Secretary Rudd of the S. A. F. to that effect: we are very grateful to Prof. Sargent for his kind offices, and are extremely glad to have the matter definitely and finally settled.

Thank you, Professor Sargent, *Hydrangea arborescens grandiflora* it shall be; and we will warrant that the American lady amateur will very promptly christen it a fetching descriptive name, in all probability the Snowball Hydrangea, but *Hydrangea sterilis* never!

E. G. Hill

Jamaicaway

Our frontispiece this week is instructive as a lesson in roadside planting in a style in which the Boston Park Department has taken the initiative. The border of shrubbery seen on the left is about eight feet wide and separates the roadway from the bridle path. It is planted mainly with viburnums, cornuses and privets. This method of planting is superior to the ordinary grass border, softening the too-often sharp edges of the parkways and adding greatly to the attractiveness of the scene. In some parts this effect is still further emphasized by plantations of wild roses, Indian currants, yellow root, *Pyrus nigra* and *arbutifolia*, *andromedas*, etc. In these borders there are planted at intervals of fifty feet the young red oaks which are in the future to furnish the permanent shading of the parkway. On the right hand side of the picture in the turf border separating the walk from the driveway some of these oaks may be seen.

Exclusively for the
commercial florist

The best way to know a man is to meet him face to face. Likewise the value of a flower is best ascertained by direct inspection. Especially is this true as regards a flower which is heralded as an acquisition commercially. That unique institution, the annual Boston Market exhibition, had its birth as a result of this need, years ago, and as each successive occasion has come and gone it has come to be recognized as an occasion of increasing importance to the flower growing community until, this year, the event takes on an importance hitherto hardly disclosed. The market exhibition announced in our advertising columns for the 29th inst. will undoubtedly bring together the largest assemblage of commercial florists seen in Boston since the meetings of the carnation and rose

societies two years ago. Leading men in the trade from far and near realize the possibilities of such an opportunity in the home of Lawson and Enchantress and those who want to get a line on the good things in carnations, roses, violets, etc., for next year will find it to their interest to be present while those who have been nursing new candidates in carnations, roses or anything else, for trade inspection, cannot afford to miss this unequalled means of publicity.

Planning the business campaign

In the present disturbed financial conditions and the approaching political struggle many wise heads think they see the presage of restricted business operations during the coming season. We, however, still believe that the unprecedented agricultural prosperity of our country may be depended upon to ward off any great degree of disaster and that much of the pessimism now current is not justified. But the prudent man will always be prepared for any exigency and it now behooves every one who desires to keep the volume of his business for this year up to last year's phenomenal record to take steps at once to extend his repute and widen his market through such means of publicity as are provided for him in the advertising columns of this paper. Now is the time to take full advantage of the opportunity for if there is to be any reduction in the aggregate of business this year, you may depend upon it that the lion's share of what is left will go to the conspicuous advertiser. In no other line of business is the cost of advertising in the professional publications so low, yet in none are the purchasing element more directly and effectively reached. Think it over and if you want your share of the business of 1908, don't delay any longer.

To safeguard the forests

A bill reported last week in the Massachusetts House of Representatives provides for the exemption from taxation for a period of ten years, under certain stipulated regulations, land planted to trees of any variety approved by the state forester. The problem of equitable taxation for timber lands is one not easy of solution, but perhaps more than any other economic question now before the American people, it demands attention and the penalty for delay is almost beyond conception. Some weeks ago Mr. C. W. Ward, who represents large timber properties in Michigan, delivered a lecture before the conference of the delegates to the Lake States Forestry Commission at Saginaw, in which he advocated the granting of a certain amount of relief from taxation to the owner of land devoted to the growing and perpetuating of a supply of timber so that he may be enabled to take steps to preserve his forest domains instead of cutting off all of the timber and turning the territory into wastes as is now being done. As Mr. Ward truly asserted, the method of taxing forest lands hitherto has had the effect practically of penalizing or fining the timber owner for preserving his timber, whereas the policy should be just the reverse—in fact, to make it expensive for the owner to destroy his timber and require him to make good a percentage of the value destroyed each year by maintaining young trees in quantity to insure a permanent income-bearing forest. Mr. Ward's argument was on irrefutable lines and it is gratifying to see that the subject is receiving attention from the same practical standpoint by the Massachusetts legislature. Happily the people are at last coming to realize how directly the floods, droughts, and extreme temperatures that vex them are due to forest destruction and popular support for any measure which promises to bring relief can now be counted upon.

AFTER ADJOURNMENT.

What a magnificent record carnation Winsor is making! Seldom do we find exhibition standard and commercial availability so fully united in one flower.

The philosopher of one of our exchanges remarks that "They's jest ez much room at the top ez they ever wuz, on'y it's further off." This condition is the penalty the rank and file must pay to their ambitious and progressive fellows. The man who is content to stay in the "average" class must pay this tribute in ever-increasing ratio. The only escape is to "get a move on," do things a little better than the other fellow and also see to it that the world knows it, by advertising, advertising, advertising, liberally and persistently. The "room at the top" will then come nearer and nearer, and it's largely your own fault if you don't get there.

COMMERCIAL FERTILIZERS SIZED UP.

Bulletin No. 119 of the Mass. Experiment Station gives the tabulated results of the analyses of commercial fertilizers during the season of 1907. The addition to the fertilizer law requiring the publication of valuations is stated, and the dealer's cash price, valuation and percentage of difference are placed opposite every fertilizer examined. The bulletin also gives the names of all fertilizer manufacturers selling in the state, as well as a complete list of the brands offered. Explanations make clear the character of the crude materials of which fertilizers are composed: the relative standing of the numerous firms is summarized in a table, and much other information is given that will prove of value to all buyers of commercial plant food. Those who have not received copies of these bulletins can have the same upon application. Requests should be addressed to the Agricultural Experiment Station, Amherst, Mass. Every man who uses fertilizers, outdoors or under glass, should read No. 119 carefully. He will find some surprises there.

A DISTHORNING INSTRUMENT FOR ROSES.

Every rose specialist knows how hindering to the work of preparing rose stocks are the strong thorns, and he will welcome an instrument that will render the work safer and more rapid, with at the same time freedom from danger to the stocks, etc., and the man who works it. Three hundred stocks per day was the output for one man working in the old manner, whereas from 3,000 and more can readily be cleared of thorns by the instrument. In the interior of the instrument there are six knives arranged in a circle. The apparatus being opened the rose stock is laid in a trough, and on closing the stock is clasped by the six knives, and pushed backwards and forwards twice or thrice, the thorns falling through an opening on the underside. It can be fixed by means of four screws to a heavy, or immovable bench or table—*Horticultural Trade Journal, London.*

A QUESTION FOR DR. GALLOWAY.

Editor HORTICULTURE: Being keenly interested in fertilizers and having a "penchant" for the clean, odorless, soluble kind, the work on carnations by the Bureau of Plant Industry excited me with the possibility that these modern agents may have been used in this case. The article on Experiments in Carnation Growing by the U. S. Dept. of Agriculture, as printed in the issue of Feb. 15, page 201 of HORTICULTURE, gives a complete fertilizer, which means one having these three principal ingredients, thus: N. 8 per cent., available phos. acid 12 per cent. and potash 8 per cent. Now here are the facts that the readers of your paper may be glad to know. This fertilizer was made up of nitrate of soda, nitrate of potash, dissolved South Carolina rock and sulphate of potash. This, then, is not a commercial fertilizer but mainly a mixture of soluble chemicals. We do not at this writing know how this was applied; when, how strong or how often, but must await more light from the doctor.

The report says that Dr. Galloway "cautioned the grower to go slow on commercial fertilizers and to put their faith and work into good composts." We admit that this staggers us, for by the table before us the complete fertilizer beats the rest six times in eight, and in every case where flat soil was used.

We think the doctor really meant to say that good organic rotted matter was best to start with and then not to feed with commercial but with soluble chemicals, as probably was done in this case, but we will await further advices from the Bureau.

DUDLEY M. PRAY.

CARNATION TEMPERATURES.

To the Editor of HORTICULTURE:

Being in the commercial business and growing flowers, etc., for the New York wholesale market, I would like to know through the valuable columns of your paper what the best temperature would be day and night to grow the following varieties of carnations: Enchantress, Helen Gould, White Enchantress, Rose Pink Enchantress, Beacon, Victory, Robt. Craig, White Perfection, Mrs. Patten, Winsor, Gov. Roosevelt, Afterglow, Sarah Hill. Boston Market, Lieut. Peary. My Lieut. Peary is inclined to go to sleep on the plant. What is the reason, and do you think it is a good commercial variety?

A subscriber to HORTICULTURE, one of the most successful growers of carnations, who prefers his name should not be mentioned, replies to the above as follows: "Most carnations do well at a night temperature of 50 to 52 degrees, and a day temperature of 40 to 45 degrees higher; Winsor, 53 to 55. Afterglow and Sarah Hill have not been grown by the trade yet. Lieut. Peary is inclined in some places to be sleepy, in others does very well and is considered a profitable variety."

It should be remembered the successful growers do not all travel in the same beaten track, and we would advise the inquirer to visit Cottage Gardens Co., Dailledouze Bros. or F. R. Pierson Co., at all of which places he will see carnations at their best.

LIBRARY NOTES.

[Any of the books mentioned in Mr. Payne's reviews can be supplied at publishers' price from the office of Horticulture.]

My Rock Garden by Reginald Farrer. (Edward Arnold, London). This is a rather more imposing volume than the preceding, for it runs into more than 300 pages. Mr. Farrer writes in a most readable style and the book as a literary production deserves our warmest praise. From a practical point of view the lover of a rock garden, and there are many, will derive much instruction from a perusal of its pages. Price, \$2.00.

The Gardens of England. (The Studio, London, Paris and New York). A very attractive volume issued as the winter number of "The Studio," a monthly periodical devoted to art. It is almost wholly composed of full paged, beautifully executed photographic views in the gardens of England in the southern and western counties. The letterpress, which only forms a quarter of the volume, deals with the history and principles of garden making and notes on the numerous illustrations. Simply speaking from the florists' standpoint we must express the pleasure that we derive from looking at such interesting garden views as Stratton Park, Hanks, Herbaceous flower border at Orcharleigh Park, Rock Garden at Killerton, Pampas Walk at Hinton Admiral Garden front at Daw's Hill Lodge, Blenheim Palace, Gardener's Cottage at Ashridge Park, The formal garden at Taplow Court, Old place, Lindfield, Old orangery at Ham House.

C. HARMAN PAYNE.

PERSONAL.

The trip to Richmond, Ind., by the Indianapolis florists has been postponed to February 26.

Visitors in Boston this week: Alex. McWilliams, Wm. Boyd and J. H. Davidson, all of Newport, R. I.; Henry Wild, Greenwich, Conn.

Jesse Pierce, nurseryman, Beverly Farms, Mass., has purchased an additional tract of land to accommodate his increasing business.

A. R. Robbins, of Robbins Bros., florists, Cambridge, Mass., while crossing the street on the evening of February 4, was struck by an auto and severely bruised.

Arthur G. Macdonald, head gardener to Mr. Luther Kountze, Morristown, N. J., will sail from New York March 1 for Blairgowrie, Perth, Scotland, for an extended stay.

Visitors in Chicago: A. C. Beal, Champaign, Ill.; Heint Bros., Jacksonville, Ill.; Martin Reukauf, representing H. Bayersdorfer & Co., Philadelphia; Henri Killen, New York.

A FRANK TESTIMONIAL.

My ad. with you has proved the most effective of any thus far.

CHAS. A. KIRBY.

Elmhurst Ill.

THE BOSTON MARKET EXHIBITION

This annual affair, regarded with so much favor by the New England florist trade, will be held at the Park Street Market, Boston, on Saturday, February 29, from 11 a. m. to 4 p. m. As will be seen by consulting the following list of regular and special premiums, the inducements for a large display are tempting and will doubtless draw out a notable line of exhibits.

CARNATIONS.

Class A		1st.	2nd.
50 Crimson	\$5.00	\$3.00
50 Dark Pink	5.00	3.00
50 Light Pink	5.00	3.00
50 Scarlet	5.00	3.00
50 White	5.00	3.00
50 Any other color	5.00	3.00

Class B

25 Crimson	\$3.00	\$2.00
25 Dark Pink	3.00	2.00
25 Light Pink	3.00	2.00
25 Scarlet	3.00	2.00
25 White	3.00	2.00
25 Any other color	3.00	2.00

Class C

100 blooms in one vase, not less than 6 varieties. 1st, Solid Silver Cup, valued at \$25.00; 2nd, Solid Silver Cup, \$7.50.

In classes A, B and C only standard or disseminated varieties can compete.

Class D

Vase of 100 blooms one variety, new or standard. Cup valued at \$25.00.

Vase of 25 new striped variety. First, \$5.00; second, \$3.00.

Vase of 25 blooms unnamed seedlings. First, \$8.00; second, \$6.00; third, \$4.00.

Class E

Special premiums offered by firms or individuals:

A. H. Hews & Co., cup valued at \$25.00 for 6 varieties of carnations, 50 blooms in a vase.

F. R. Pierson Co., Tarrytown, N. Y., prizes for 25 blooms of Winsor; first, \$6.00; second, \$1.00.

Peter Fisher, prizes for best 50 blooms of Beacon, \$6.00, best 25 blooms of Beacon, \$3.00.

ROSES.

	1st	2nd	
25 American Beauty	\$10.00	\$5.00
25 Pink	10.00	5.00
25 Red	10.00	5.00
25 White	10.00	5.00
25 Any other color	10.00	5.00

Park Street Flower Market, prize for best new rose to be disseminated in 1908, silver cup valued at \$25.00.

Wm. E. Doyle, for the best 25 Killarneys, silver cup, value \$25.00.

A special prize of solid silver cup and certificate of merit will be awarded to the exhibit showing the highest cultivation.

MISCELLANEOUS.

	1st	2nd	
Vase of 50 Tulips	\$5.00	\$3.00
Vase of 50 Narcissus	5.00	3.00

Collection of cut Bulbous stock, not more than 25 of a variety	12.00	8.00
Best 50 Lily of the Valley	3.00	
Best 50 Marguerites	2.00	
Best 25 Mignonne	3.00	
Best 100 Pansies	2.00	
Best 25 Anfirrhinum	3.00	
Display of novelty not otherwise classified	5.00	3.00

SWEET PEAS.

	1st.	2nd	
Vase of 100 White	\$3.00	\$2.00
Vase of 100 Pink	3.00	2.00
Vase of 100 any other color	3.00	2.00

A. C. Zvolanek Trophy valued at \$25.00 for two vases of 200 each, Florence Denzer and Christmas Pink sweet peas.

VIOLETS.

Only foliage of the variety exhibited can be used.

	1st.	2nd.	
100 Campell	\$3.00	\$2.00
100 any other double	3.00	2.00
100 Princess	3.00	2.00
100 any other single	3.00	2.00

James Wheeler Trophy for best New Violet, 200 blooms, Silver Cup valued at \$25.00.

SPECIAL PREMIUM.

Best exhibition from any grower selling his product at Music Hall Market; 1st, \$10.00; 2nd, \$5.00.

POT PLANTS.

Thirty square feet of space will be allotted to any exhibitor of pot plants. Suitable awards will be made for any exhibit of especial interest or merit.

IMPORTANT.

All exhibits must be staged by 10.30 o'clock A. M. It is very important that this rule should be observed as the exhibition is of short duration. Judges to be allowed to call for any information or assistance necessary.

RULES FOR JUDGES.

Carnation Scale of Points.

This scale shall be employed in judging all seedlings for Certificate of Merit, or for any special prize, and, in all classes where competition is close, it shall be used to arrive at a decision.

Color	25	Substance	10
Size	20	Form	15
Calyx	5	Fragrance	5
Stem	20			
Total 100				

LIST OF COMMITTEES.

Arrangements.—W. H. Elliott, chairman, Brighton; Geo. Cartwright, secretary, Park street, Boston; E. Allan Peirce, treasurer, Park street, Boston; S. J. Goddard, Framingham; Wm. Sim, Cliftondale.

Judges.—S. J. Reuter, Westerly; R. E. Thos. Roland, Nahant; A. H. Fowkes, Newton Highlands; E. A. Wood, West Newton.

Carnation Committee, E. Allan Peirce, Waltham; S. J. Goddard, Framingham; Wm. Nicholson, Framingham; M. A. Patten, Tewksbury; Peter Fisher, Ellis.

Rose Committee, W. H. Elliott,

Brighton; Alex. Montgomery, Natick; Eber Holmes, Montrose; Harry Budlong, Providence, R. I.

Violets, Sweet Peas and Miscellaneous.—Wm. Sim, Cliftondale; Wm Spilsbury, Woburn; Thos. Pegler, Park street, Boston; H. F. Calder, Norwood.

Plants and Bulbs.—L. W. Mann, Randolph; E. Sutermeister, Readville; Thos. Roland, Nahant; Frank T. White, Holbrook.

A. F. J. BAUR.

A. F. J. Baur, the young and energetic Vice President of the American Carnation Society, is a native of Pittsburgh, Pa., and is 32 years of age. When a boy of 13 he began his horticultural training with F. Morat's Sons at Louisville, Ky., since which time he has been five years with the E. G. Hill Co., one year with Stuart & Haugh, two years as foreman for H. A. Niemeyer of Erie, Pa., and in 1899 started in business with F. S. Smith under the firm name of Baur & Smith, where he has made carnations

A. F. J. BAUR

a specialty and raised many seedlings, some of which have made a good record on the market. He was elected Secretary of the State Florists' Association of Indiana last year and Vice President of the American Carnation Society at the Washington meeting.

INTERNATIONAL HORTICULTURAL EXPOSITION AT GHENT.

The centennial exposition of the "Societe Royale d'Agriculture et de Botanique" of Ghent, Belgium, will be held in the gardens of the Casino from April 23 to May 3, 1908. This exposition is held regularly every five years, and the coming one being the centennial, the display promises to be exceptional in extent and interest.

"THE PRIVATE GARDENER."

This is the title of the lecture which Robert Craig of Philadelphia will deliver before the Massachusetts Horticultural Society on Saturday, February 29th. Mr. Craig is a forcible speaker, understands his subject and will undoubtedly draw a large audience.

NEWS OF THE CLUBS AND SOCIETIES.

ST. LOUIS FLORIST CLUB.

The Florist Club meeting which took place on Feb. 13 was one of the best attended and most interesting meetings in its history. The attendance numbered over fifty. The attraction was our annual carnation exhibition, which was a large one and gave the local growers plenty to talk about. Exhibits from outside growers were not as extensive as usual, but the local growers came forward and showed well-grown standard varieties. James W. Dunford exhibited Aristocrat, Rose Pink Enchantress and White Perfection; J. W. Pilcher, Beacon; E. W. Guy, Lady Bountiful and Rose Pink Enchantress; St. Clair Floral Co., New Pink Seedling No. 20; Henry Johan, very fine Aristocrat; J. F. Ammann, extra fine mixed varieties; John Steidle, mixed varieties; P. Schnider, Pink Enchantress, Enchantress, T. W. Lawson and Lady Bountiful; Chas. Beyer, Enchantress.

Among the new varieties shown were, by the Chicago Carnation Co., an extra fine vase of Andrew Carnegie; Stevenson Bros., of Baltimore, Md., a vase of Splendor, and Richard Witterstaetter, a large vase of Afterglow. These were great attractions for the local growers.

The meeting opened promptly at 2.30, President Young presiding. The Committee on the Pottery Question reported \$2000 in subscription, and will continue until the allotted time, 5th May, to raise the \$10,000 subscription. The Trustees reported that the present meeting hall would have to be vacated by the end of March. They were instructed to find new quarters by next meeting. The Horticultural Society, through its Secretary, O. G. Koenig, in a letter asked the members to assist in making their spring flower show a success; this matter was left to the Trustees to act upon as they see fit.

Treasurer Weber was instructed to pay the first 20 per cent. call for the National Flower Show. It was also decided to hold our yearly Rose Show on March 12th at the old meeting place.

Fred Ammann addressed the members on behalf of the Illinois State Florists' Association, and invited the members to attend the meeting Feb. 18 and 19 at Springfield, Ills., and twenty members decided to make the trip.

The judges, Messrs. Fillmore, Ude and Bentzen, reported as follows: On Rose Pink Enchantress, J. W. Dunford first, E. W. Guy second, White, J. W. Dunford's White Perfection first, Schnider's Bountiful second and Guy's Bountiful third. Red, Pilcher's Beacon first, Aristocrat, J. W. Dunford, first, and Henry Johan second. Lawson, P. Schnider first, Enchantress, J. W. Dunford first, P. Schnider second, Chas. Beyer third. In the mixed vases, J. F. Ammann took first and John Steidle second and third. In the new varieties class, R. Witterstaetter's Afterglow took the club's certificate of merit, and Splendor,

Carnegie and Seedling No. 20 took honorable mention.

The question box was next opened, and some very interesting discussions took place. This ended the February meeting, and President Young invited all to a supper which was prepared by the trustees in the cafe below the meeting hall, at which forty sat down to spend the rest of the evening. The President announced that at the next meeting, in March, our rose meeting, the same thing will take place in the cafe, and he hopes for even a larger attendance.

MORRIS COUNTY GARDENERS' AND FLORISTS' SOCIETY.

Thirty-eight members met to hear C. H. Totty discuss The Merits and Defects of the New Chrysanthemum, which he did in a candid and interesting way. A general discussion took place as to why varieties so soon deteriorated, and many theories were advanced. In-breeding in the producing of seedlings was a theory that found favor with many.

We had a very creditable monthly exhibit. A. Herrington had a fine vase of carnation Beacon, C. H. Totty had White Perfection in all her glory; in this vicinity very few split calyxes are reported. A. R. Kennedy brought White Enchantress and Victory, the latter considered the best ever shown here. Cultural certificate was awarded to each.

From Florham Farms came a neat collection of hothouse vegetables and also some stocks, Beauty of Nice and Queen Alexandra, in 4-in. pots; one would hardly believe it possible to produce such spikes in such small pots. W. A. Manda, South Orange, had a new cerise pink carnation seedling, No. 20. Wm. F. Lyons had a white hybrid calanthe. Robt. Scott & Son of Sharon Hill, Pa., sent a vase of new Rose Mrs. Jardine, which got a certificate of merit.

Our next meeting, on March 11th, will be Carnation Night, and with so many novelties in the market we ought to have a show better than we ever had. A prevailing impression among gardeners is that while an introducer's word may be all in good faith, there is nothing like seeing a variety on the exhibition table. We will invite novelties as far as we can, but would be glad to have every novelty on the market here. However, we bank on a fine show and a good time. Some of our Orange brothers are coming up, and as we invite standard varieties, too, they may surprise us, as there are carnations in that vicinity equal to any in this country.

E. REAGAN.

MASSACHUSETTS HORTICULTURAL SOCIETY.

On February 29th, Robert Craig of Philadelphia will deliver a lecture at Horticultural Hall, Boston, on "The Private Gardener." The lecture will begin at 11 A. M.

CHICAGO FLORISTS' CLUB.

The Chicago Florists' Club held its meeting in Handel Hall, February 16, President Kill presided and got down to business in fine order. Applications for six new members were received and favorably passed upon for election at the next meeting. The agreement between the Art Institute of Chicago and the Club as pertaining to the use of the hall for the Rose Show, was accepted and August Poehlmann was chosen for manager of the exhibition, which will continue from March 25 to 27, inclusive. It was voted to have a banquet in connection with the visit of the American Rose Society and the president appointed a committee to make arrangements accordingly. A discussion was brought up as to the advisability of securing a new place of meeting. This will be further considered at the next meeting. The president announced chairmen of various standing committees as follows: Finance, H. N. Bruns; sports and pastimes, Philip C. Schupp; transportation, F. F. Benthey; good of the club, T. E. Waters. A vase of flesh-colored seedling carnations exhibited by Fritz Bahr, Highland Park, Ill., was awarded a club certificate, scoring 85 points. A. C. Beal, of Champaign, Ill., was a visitor and spoke at length on the coming meeting of the Illinois State Florists' Association at Springfield. T. E. WATERS, Sec'y.

BUFFALO FLORISTS' CLUB.

A well attended meeting of the Buffalo Florists' Club was held at Kasting Company's Hall on Friday night last. Business of importance took up considerable time as twenty new applications were acted upon. The twenty new members elected being of young blood, it now looks as if the club will be boomed and better attendance assured at meetings hereafter. Entertainment and other committees will be appointed. Nominations of officers for ensuing year were as follows:

President, Charles Sandeford and Charles Weichert; vice-president, David Scott and George McClure, Jr.; secretary, Rowland Cloudsley; financial secretary, E. C. Brucker; treasurer, W. H. Eiss.

Interesting talks by the past officers, L. Neubeck, Wm. F. Kasting, Charles Keitch, and others were much appreciated. A fine lunch and refreshments were served in the banquet hall, and a good evening's entertainment was enjoyed.

The next meeting is called for Friday, March 6th, when election of officers will take place and the annual banquet will follow. E. C. B.

NASSAU COUNTY HORTICULTURAL SOCIETY.

The N. C. H. S. held its regular monthly meeting at the Oriental Hotel, Glen Cove, Feb. 12, with a large attendance. In the competition for points the awards were as follows: S. J. Trepass, Cattleva Trianae, 89; H. F. Meyer, carnations, 84; Valentine Clores, narcissi, 83. As Mr. Henry

FORMOSA

LILIUM LONGIFLORUM

Ask your dealer for our own special grown stock or write us direct for quotations. Only a limited quantity available for the coming season 1908. Delivery will be made the first part of August. The bulbs are thoroughly ripened one month before the Bermuda Harrisii and are considered far superior in quality as they are *entirely free from disease*.

Careful trials were made for two years and were so successful that we imported over 300 cases last season. Our cases will be marked Y. N. Co.

YOKOHAMA NURSERY CO., Ltd., 31 Barclay Street, NEW YORK

Matz is going into business in Connecticut he tendered his resignation as treasurer to the society, and was given a vote of thanks for his services. E. J. Brown was unanimously elected to fill the position.

GEORGE M. KURZ, Cor. Sec'y.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

Wallace R. Pierson, of Cromwell, Conn., will be the lecturer before the G. & F. Club, of Boston, at Horticultural Hall, on the evening of Tuesday, February 25. Mr. Pierson's subject will be "Carnations," a branch of horticulture in which he is well versed and the opportunity of listening to him will be embraced by a record attendance. F. R. Pierson, H. A. Jahn and other visitors are expected to be present and join in the discussion and contribute to the exhibition which promises to surpass anything hitherto seen at a meeting of this club.

ST. LOUIS HORTICULTURAL SOCIETY.

The St. Louis Horticultural Society will hold a spring flower show next month, but on a much larger scale than last year. The executive committee met recently and elected C. C. Sanders chairman of the committee. The committee has decided this year to charge 25 cents admission. The selection of the hall has not yet been made, but Mr. Sanders says most likely the dance hall would be used in the Masonic Temple building. The local florists will no doubt help all they can to make the show a great success.

DAYTON FLORISTS' CLUB.

Resolutions on the Death of J. B. Heiss.

"There is a Reaper whose name is Death;
And with his sickle keen
He reaps the bearded grains at a breath,
And the flowers that grow between."

The passing of Joseph B. Heiss brought grief to all who knew him. His personal qualities were such as made him loved by all who knew him for what he was. His long residence in Dayton was devoted to the doing of his part in the building up of the city. Realizing in a measure what a great loss his sudden taking away means to the community, we desire to offer our tribute of respect. The poor words at our command are inadequate to express our sorrow! Let the following resolutions, adopted at a meeting of the Florists' Club, serve as they may to show our love and respect.

Be it Resolved, That in the death of Joseph Heiss, our first President, the Florists' Club loses a faithful member, a strong friend. We mourn his loss deeply. None knew him but what valued his friendship and all can scarcely realize that he will meet no more with us on earth. His place in our hearts is sure.

Be it further Resolved, That these expressions be made a part of our records. Also, that a copy be sent to Mrs. Heiss, whose sorrow is our own. Copies of these resolutions are sent to the Florists' trade publications and the Dayton Press.

H. H. Ritter, Geo. Bartholmew, John Bohner, Committee.

CLUB AND SOCIETY NOTES.

P. W. Ayers, forester, will lecture before the Worcester County Horticultural Society, Worcester, Mass., on February 27; subject, "Forestry."

Robert Cameron, of Harvard Botanic Garden, Cambridge, Mass., will address a meeting of the Newport Horticultural Society, Feb. 25, on "Annuals and Biennials." This will be Mr. Cameron's first visit to Newport in the capacity of lecturer and there is no doubt a cordial reception will be his.

The Dayton Florists' Club sent to the funeral of ex-President J. B. Heiss a beautiful cross of roses, carnations, hyacinths, lilies and sweet peas. The design stood six feet high, rising from a rich base of American Beauty roses. A ribbon bore the inscription, "Our First President—Dayton Florists' Club."

The twenty-first annual dinner of the New York Florists' Club will be held Saturday evening, February 29th, 1908, at the St. Denis Hotel, Broadway and 11th St., at 7 o'clock. The price of tickets is \$5.00 each to members and their guests. Contributions of flowers for the decoration of the tables will be welcome and may be sent to W. F. Sheridan, 39 West 28th Street. Committee: Wm. Marshall, R. M. Schultz, A. M. Henshaw, L. B. Craw, Walter F. Sheridan.

THE BOSTON VIOLET

The people today are looking for New Violets just as much as they are for new roses or carnations.

THE BOSTON VIOLET

For the past two years has been placed before the most sceptical buyers in America and they prefer it to any other.

THERE'S A REASON

The Boston Violet is the largest, the most fragrant, it has a very pleasing color, and it is a great keeper.

THE BOSTON VIOLET

Is a variety that is early grown, it is the strongest grower and is in crop from September to May.

THE BOSTON VIOLET

Was awarded a First Class Certificate of Merit by the Massachusetts Horticultural Society and a Report of Superior Merit by the Gardeners' and Florists' Club of Boston.

Distribution will Commence in April. Order Now.

PRICES—\$2 per 12 ; \$12 per 100 ; \$100 per 1000.

W. Atlee Burpee & Co., Philadelphia.—Burpee's "Blue List," giving wholesale prices for 1908 for market gardeners and florists. A splendid list, illustrated and making a book of over 100 pages. Colored illustrations of Burpee's Matchless, Chalk's Early Jewel and Sunnybrook strain of Sparks' Earliana tomatoes are included.

PUBLICATIONS RECEIVED.

La Bibliographie du Chrysanthème. This is the title of a pamphlet compiled by C. Harman Payne, F. R. H. S., being a reprint of a contribution to the Journal of the National Horticultural Society of France. The list of publications included in this index includes all known pamphlets and treatises on the chrysanthemum published hitherto in Europe and America and will prove a very useful reference index for those who are interested in the history and cultivation of the golden flower.

Forest Trees of Massachusetts: How You May Know Them. A pocket manual by David A. Clarke, under the direction of F. W. Rane, State Forester, Boston, Mass. This handy volume presents a practical working description of the commercial trees at the command of the Massachusetts citizen in a plain and untechnical manner. Drawings in illustration of the text are freely introduced. The author, Mr. Clarke, is a Harvard instructor, of recognized experience and ability in forest botany. He is well-known to our readers as a frequent contributor to our columns. This handbook, which it is hoped will be a source of inspiration towards assist-

ing people in identifying the native trees, is offered by the State, free of charge, and may be obtained on application to F. W. Rane, State House, Boston, Mass.

The Report of the Secretary of Agriculture on the Southern Appalachian and White Mountain Watershed has just been issued. It is a comprehensive and convincing statement of the commercial importance, area and condition of these wild forest tracts, the advisability of their purchase for national forests and the probable cost. Two maps are included. The recommendations of the Secretary of Agriculture in this document are exceedingly moderate and conservative and the national government can do no less than to adopt and put them into effect. It might wisely do more but on the principle that half a loaf is better than no bread the Secretary undoubtedly is taking the best course. No more important or patriotic duty confronts our national legislators than to save from threatened destruction these remnants of our great protective forests.

Landscape Gardening for Amateurs, accompanied by a selection of one hundred detailed plans of lawns and gardens with key to planting. Wagner Park Conservatories, Sidney, Ohio. This handsome album is a credit to the author, Mr. B. P. Wagner. It is illustrated with numerous fine half tones on heavy coated paper and is appropriately dedicated "to those who love beautiful surroundings." The various chapters are devoted to the following subjects: Landscape Gardening for Home Grounds; How to Make the Back Yard Attractive; Formal and Old-Fashioned Gardens; Improving School Grounds; Improving University and Sanitarium Grounds; Improving Factory Surroundings; Improving Hotel and Pleasure Resorts; A Plea for the Improved Public Square, Play Ground, Park and "Town Beautiful"; Vines; Attractive Verandas and Window Boxes; Decorative Plants; Desirable Bedding Plants; Hardy Plants; Hardy Shrubs and Pruning; How to Plan and Plant Hardy Flower Beds; Roses; Shade and Ornamental Trees; Hedges; Plans. We are glad to devote a little extra space in calling the attention of our readers to this publication because it is in exact line with sentiments often expressed by HORTICULTURE and because it is worthy of emulation by florists and gardeners generally. We hope that the book will fulfil its mission of stimulation and instruction in beautifying out-door surroundings. The price is \$1.00.

The annual banquet of the Lenox Horticultural Society, Lenox, Mass., February 15, was attended by ninety guests, including ladies, an innovation which will undoubtedly become a regular feature of these festive occasions hereafter. Alex. MacConnachie was toastmaster; instrumental and vocal music and recitations made the evening pass pleasantly.

You will find something worth reading on every page of HORTICULTURE.

APPRAISERS' DECISION.

The protest of Wm. R. Manierre of Chicago against the assesment of duty on cypas stems has been overruled on the ground that cypas stems are properly classified as nursery stock under paragraph 252 and not as palm leaves in natural state which are free of duty under paragraph 552, tariff act of 1897.

PLANT IMPORTS.

There were entered at the port of New York during the two weeks, February 6th to February 18th inclusive, the following:—

From Rotterdam: H. F. Darrow, 5 bags garden seed; Peter Henderson & Co., 50 lags grass seed; Maltus & Ware, 13 pgs. roots and seeds, 44 pgs. seeds, 13 cs. plants; McHutchison & Co., 21 cs. do.; C. B. Richard & Co., 1 cs. do.; J. M. Thorburn & Co., 9 bgs. seed; Vaughan's Seed Store, 3 pgs. do.; Sundry Forwarders, 39 pgs. do.; 4 cs. plants, 11 cs. flower roots.

From Antwerp: McHutchison & Co., 2 cs. hulbs; Vaughan's Seed Store, 8 cs. do.; Forwarder, 1 bl. seed.

THE ALASKA-YUKON-PACIFIC EXPOSITION.

The next great world's fair, the Alaska-Yukon-Pacific Exposition, will be held at Seattle, Washington, opening June 1, and closing October 15, 1909. This exposition will be held in a section of the country where world's fairs are new, and for that and many other reasons it is expected to be a success, beneficially, educationally, artistically and financially.

Work on the grounds and buildings of the exposition is well under way, and the management is determined to have everything in readiness by opening day. This has been written about all expositions in late years, but the promise has never been completely fulfilled. The officials of the Alaska-Yukon-Pacific Exposition, however, have started out with a completed-opening-day idea above everything else, and if they do not carry out their plan it will not be because western energy has not been expended in the task.

The Alaska-Yukon-Pacific Exposition promises to be different from former world's fairs in many ways, but one policy stands out so far above any of the rest that the entire press of the country is commenting favorably about it. No money will be asked from Uncle Sam to carry on the work. That policy must be conceded as original.

All the management desires is for the United States government to participate in the same manner as foreign countries, and the different States, by erecting buildings and installing exhibits therein. Former expositions have been aided by the government in many different ways. Outright gifts of large sums of money have been made by Congress to some world's fairs, while others have negotiated loans from Uncle Sam, some of which were paid back and some of which were not. Some expositions have received both donations and loans. As stated before, the Alaska-Yukon-Pacific Exposition will ask for neither. A clause pledging this policy has been inserted in the congressional bill making provision for participation only by Uncle Sam.

Since the United States government began to patronize expositions down to the Jamestown fair, Congress has appropriated a total of \$28,752,251 for world's fairs. Only \$48,999 of

this money has been spent west of the Rocky Mountains, the Lewis and Clark exposition, one of the most successful ever held, receiving the benefit of that amount.

The bill that has been introduced at the present session of Congress provides an appropriation of \$1,175,000, to enable Uncle Sam to take advantage of the opportunity for effective advertising. The money will be apportioned as follows:

	Building.	Exhibit.
Government	\$200,000	\$350,000
Alaska	100,000	200,000
Hawaii	50,000	75,000
Philippines	75,000	75,000
*Fisheries	50,000	

*The fisheries exhibit is included in the general government display.

On June 1 last before a crowd of fifteen thousand persons ground breaking ceremonies were held, with many prominent men making addresses, among whom was Hon. John Barrett, director of the International Bureau of American Republics, representing President Roosevelt. From that date to the present time work has been going on rapidly upon the exposition grounds. Most of the grading and clearing has been finished. All of the principal roadways, avenues, circles and plazas have been completed. The Administration Building has been erected and occupied by the executive force for several months. Contracts have been let for the construction of five large buildings and several small ones. Among these are the Manufactures Building, Agriculture Building, Auditorium, Palace of Fine Arts, and Machinery Hall. The three latter buildings will be permanent structures, built of buff brick with terra cotta trimmings. The "A-Y-P," as it is sometimes called in Seattle, will differ again from some former fairs in that some of its exhibit palaces will be permanent structures. The grounds are located on the property of the Washington University, a State institution, and after the exposition is over the permanent buildings and those substantially built will be taken over by the college, to be used for educational purposes.

The purpose of the exposition, which is to exploit Alaska and Yukon and the countries bordering on the Pacific ocean, is receiving much favorable comment throughout the country.

FRANK L. HERRICK.

FIRE RECORD.

The boiler house and potting shed connected with the greenhouse of J. T. Fuller, Bryantville, Mass., were completely destroyed by fire on Feb. 11. The entire stock of his three houses was killed by the cold. Loss is estimated at \$1,000; small insurance.

A rather serious fire occurred in the boiler shed of the American Rose Co.'s place on Bladensburg Road, Washington, D. C. The fire is supposed to have been caused by a stray spark. Damage amounted to about \$1,000. Fortunately the houses were intact, the only injury being done by the smoke, and damages were repaired sufficiently to fire the boiler in the open and thus save the house from freezing.

A colored plate of blooms of azalea Etoile de Somergem was sent out with a recent issue of La Tribune Horticole. The flower is large, double, and the color as shown in the plate is a bright deep crimson.

Canna King Humbert The best of the dark leaved, very large flowered brilliant scarlets and a perfect gem that pleases everyone. We are long on this and offer at the special price of \$1.25 per doz., \$8 per 100.

Canna Grand Chancellor Bulow A remarkably rich crimson scarlet that never sunburns, with flowers of good size and very free, was much admired in our trial grounds during the past two seasons. \$1.50 per doz., \$10 per 100.

Canna Frau Marie Nagel An introduction of Wilhelm Pfitzers, the Canna specialist of Germany who has given us many important varieties. It is the most floriferous of the large creamy white sorts and contrasts fine with high-colored sorts. \$1.25 per doz., \$8 per 100.

New Decorative Dahlia Souvenir de Gustave Doazon The most sensational Dahlia of the season, of mammoth size, producing under ordinary cultivation flowers 6 inches in diameter and can be grown to measure full nine inches, it is of free growth and remarkably free flowering. Certain to become one of the most popular sorts for cutting and decorating, its pure scarlet color, immense size and unique form guarantee its future.

Rex Begonias We have at the present time the finest lot of Rex Begonias that we have been able to offer for many years, twenty distinct varieties, fine plants in 3 inch pots, \$1.25 per doz., \$8 per 100; the set of twenty sorts, one of each, for \$2.

HENRY A. DREER, 714 Chestnut St., PHILADELPHIA, PA.

BEGONIA GLOIRE DE LORRAINE

Stock plants to propagate from, or for growing on, 2½ inch and 3 inch pots, \$15.00 per 100; \$140.00 per 1000.

These are now ready for delivery.

Adiantum Farleyense

strong stock plants from 6 inch pots, good for propagating only, will average 50 eyes each.

\$6.00 per dozen.

POINTS ON CARNATION BREEDING IN AMERICA.

Read before the joint meeting of the American Carnation Society and American Breeders' Association by C. Willis Ward, Queens, N. Y.

Though I have devoted considerable time to the breeding of carnations and to the study of them during the past fourteen years, in view of the complexity of the subject and my lack of scientific knowledge, I feel diffident in placing my views before a conference composed of the most advanced scientific talent of the world. I shall not attempt to enter into a scientific discussion of the subject, but will endeavor to state in plain language what seems to me to have been thus far accomplished.

The Original Carnation.

As most florists know, the original carnation, which has been known in history for several centuries before the Christian era, was a five-petaled single bloom one inch in diameter and of a pinkish-mauve color. It was distributed in its wild state over the whole southern half of the temperate zone in Europe, but was known more particularly to historians as inhabiting France and Northern Italy. It was found in abundance in Normandy, from whence it is generally believed to have been introduced into Great Britain about the time of the Norman Conquest. Even so recently as 1874 it was found in a wild state covering the Castle of Fallaise, in which William the Conqueror was born. It was described by Theophrastus as early as 300 B. C., and has been frequently mentioned in history since that date.

Methods of Reproduction.

The carnation of today, the subject upon which I am working, is the product of several centuries of hybridisation and culture. It is an open-pollinated species, and mother plants can be chosen from amongst hybrids, as well as by imbreeding upon the same plant or upon plants of the same variety. A variety once produced from seed is easily perpetuated for a certain period by propagation from cuttings which are easily rooted and usually secured in abundance. Improvements in varieties may be made by bud selection and new varieties are sometimes secured by bud variation (sports), as well as from seed variation and by hybridisation.

In raising varieties from hybridised seed very few improvements are produced, the proportion being one good variety for every thousand hybrids grown, and probably as little as one decided advance in each five or ten thousand hybrids grown; and unless some law is discovered whereby we can forecast more surely than we now can what certain specified hybrid seed will produce, it would seem as if even this low proportion of valuable new varieties would decrease rather than increase in view of the higher standard which is being demanded from year to year.

Working for Color Improvement.

Up to the present time I have been

pursuing my studies in breeding upon the single subject of color alone, basing my work upon the theory that any laws developed in color would hold good when applied to the development of other qualities; and this hypothesis I still believe to be correct.

The tools used are very simple, consisting only of a pair of delicate tweezers and a microscopic magnifying glass. I used to employ a fine camel's hair brush for transferring the pollen, but eventually abandoned it, as I found the use of the tweezers less difficult and speedier work could be done than with the brushes.

In hybridising the carnation the first step is to remove all the anthers from the mother flower before they develop, and to watch the pistil until it is in a proper receptive condition. The anthers of the selected male parent are watched until just bursting, and the pollen is in the condition of a dry powder. The anther is then removed by means of the tweezers and the pistil of the mother flower is fertilized by lightly touching it along its entire length with the pollen-bearing anther. Conception generally takes place within twenty-four hours after this operation, provided the conditions are favorable.

In order to pursue my color studies with reasonable method I have divided the work into the following sections:

1. Fancy section, comprising all varieties peculiarly marked, of various colors.
2. Purple and blue section, comprising all purple flowers and any which may show a tendency towards blue in color.
3. Crimson and maroon section, comprising all shades of crimson, maroon or scarlet maroon.
4. Scarlet section, comprising all shades of red and scarlet.
5. Light pink section, including all shades of salmon, flesh or daybreak tints.
6. Dark pink section, including all rose, cherry and deep pink tones.
7. White section.
8. Yellow variegated section, including all varieties having a yellow ground with scarlet, crimson or pink markings. I have not as yet been able to establish a pure yellow section, for even though the seeding plant may give pure yellow flowers for a time, as soon as propagation is carried on to any extent, more or less variegation appears.
9. White variegated section, comprising all varieties with white grounds marked with various colors.
10. Pink variegated section, comprising all varieties having a pink ground of any shade with markings in deeper colors.

In the purple and blue section I

have not as yet succeeded in producing anything that might be termed a blue; for, although we have had several varieties showing a distinct blue shade, there has invariably been enough pink in it to convert the tone into a purple or a mauve. The crimson, dark and light pink, scarlet and white sections have been fairly well fixed; but the yellow, white and pink variegated, and blue sections will be very difficult to fix, as they are essentially mosaics, and there is a constant tendency towards variation in all their progeny.

CHICAGO RETAIL TRADE.

Chicago retailers report a good finish although Valentine's Day was a very disagreeable one as to weather, rain, snow and sleet falling at intervals all day. Most of the downtown stores had window displays of red heart-shaped boxes which added much to their other show of violets and spring flowers. It is to be hoped that some of the storemen will order in better season another year as the supply houses were unable to supply the demand for these boxes at the last day and many buyers got disappointed. Among the new and attractive things was a heart-shaped hamper of birch bark, neatly decorated with violet color and sold exclusively by one supply house.

The Chicago delegation to the Third Annual Convention of the Illinois State Florists' Association at Springfield, Ill., which left at 10.15 P. M., Monday, via Illinois Central train under the lead of Chairman F. F. Bentley, included Leonard Kill, George Asmus, August Poehlmann, E. F. Winterson, J. E. Jensen, J. C. Vaughan, Jas. Wilson and Fred Longren.

'TIS FREE TO EVERYBODY IN THE TRADE

H. BAYERSDORFER & CO., 1129 Arch St., Philadelphia, Pa.

FLOWER MARKET REPORTS

BOSTON We should like to be able to report some improvement over the sluggish and unsatisfactory conditions recorded for the previous week, but there is nothing to warrant such. Demand has not increased any and supply, which it was hoped might slacken up, continues to increase. Roses are now in the same condition of over-supply that carnations have been experiencing, and indications are for a still heavier overstock. Bulbous stock is, if possible, in worse straits than ever before. Yellow narcissi are splendid as to quality but that does not appear to help them to move any faster. Altogether, the market is disappointingly slow.

Trade has been very un-
BUFFALO even, one day a flurry and the next two no life at all. St. Valentine's day was quite lively and the demand was more brisk, especially in the violet and rose line, but as for carnations there were enough to go around a number of times and at prices ridiculous for the month of February, although of good quality generally. The keeping quality has not been of the best, a result attributed to the changeable weather. Roses are none too plentiful and have cleaned up well. Beauties are coming in only normal supply and selling rapidly; also Richmonds, Killarneya and other teas, and prices holding firm. Narcissi overloaded. Spring stock sold better than in previous week. Adiantum and other greens in good supply.

The past week, being
CHICAGO so-called "Cupid Week," had a tendency to rush business somewhat with the shipping trade. It was very good, a great many violets as well as other flowers being sent out. Roses still hold up at fair prices, Beauties not being so plentiful and bringing better figures. Carnations, first class stock, have held up well but second class stuff is being sold at any price obtainable. Lily of the valley is selling well as also are orchids. Bulbous stock is still on the decline.

Your correspondent is
DETROIT forced to idleness through a broken collarbone. On the same day his mishap occurred Chas. Warnke of Woodmere broke his left leg. The bones of both unfortunates are beginning to heal nicely. Although the weather was anything but favorable to business, Valentine's Day nevertheless brought forth a healthy increase in the flower business. Everybody was very busy that day while several banquets and the arrival of Secretary Wm. H. Taft caused considerable hustling most of the week. Prices are maintained at good healthy figures with carnations crowding the market to some extent.

Trade conditions
INDIANAPOLIS for the past week have been no better. Bulbous stock is more than enough; carnations are also coming in a little stronger, red having the slowest sale, and there are roses enough to go around. Valentine's Day was not up to last year. Violets took the lead.

There is no improve-
NEW YORK ment in market conditions here and none in sight. The abundant supply of carnations and bulbous stock makes clearances difficult, and when effected it is at low figures. The cut of tea roses is not heavy but the demand is so uneven that fixed quotations are out of question and, with cheap carnations in competition, prices are depressed. American Beauties are in light supply still and the price for them is fairly steady. Cattleyas are bringing more money now as a result of a lighter crop. Lily of the valley is doing fairly well at the present writing. Of freezias, sweet peas, daisies, Harrisii and forget-me-nots there is a plenty, going at all sorts of prices according to quality. Supply and demand are about equal as regards smilax and asparagus. To sum up the situation, it may be said that the market is supplied with more stock than can be moved daily and trade is dull.

Three bad days
PHILADELPHIA followed by three good. The bad on account of cold weather and lack of demand, the good because of a rise in temperature and St. Valentine. The rise in temperature let the fakirs out, and St. Valentine called for violets in immense quantities, also welcomed red roses, sweet peas, myosotis and Paris daisies. The carnation was probably the worst sufferer of the week but American Beauty was not far behind. The area under cultivation both for Beauties and carnations is much larger in this vicinity than ever before, and the demand for these and everything else is away below normal. Richmond roses were a fairly satisfactory proposition, also Liberty. Brides sold well but at reduced prices. Fancy Bridesmaids brought good prices but the great bulk, being under grade, suffered severely. Daffodils never so plentiful; too much of all kinds of bulbous flowers. Orchids clean up well—perhaps on account of being off crop. Asparagus, plumosus and smilax find a satisfactory market.

Improved condi-
WASHINGTON tions are apparent in the flower market and several of the retailers are more than rushed. Prices are still normal and there is every reason to believe that they will continue so until Lent begins, for there are numberless gaities to be crowded into the next two weeks.

BUSINESS CHANGES.

Max R. Englemann has withdrawn from the firm of R. Englemaun & Son, of Pittsfield, Mass.

Miss Lizzie Miller, who was formerly connected with the Mt. Hope Floral Co., is manager of the New Floral Co., at 65 Hammond street, Bangor, Me.

The Holloway Seed and Floral Co. will hereafter be known as the Robinson Seed and Plant Co., Dallas, Texas.

A. Peterson and S. E. Lawrence, two well known florists of Hoopston, Ill., have combined their interests, and the firm name will be Peterson & Lawrence.

INCORPORATED.

Minge Floral Co., Mobile, Ala.; Maria Minge, Windham Lyon, W. M. Bailey; capital, \$20,000.

The Guthrie-Lorenz Company opened a new flower store at 420 Sixth Ave., Des Moines, Ia., on February 10.

A. J. Fellouris Co., New York, wholesale florists; A. J. Fellouris, S. J. Loupy, G. G. Malhami; capital, \$5,000.

McKay Nursery & Floral Co., Jackson, Miss.; A. B. McKay, R. L. Atkinson, J. T. Dameron, J. T. McKay; capital, \$20,000.

Rapp Horticultural Building Co., New York; to manufacture greenhouses, etc.; Roy I. Rapp, W. J. McCormick, W. C. Lange; capital, \$10,000.

Earp-Thomas Farmogerm Co., Jersey City, N. J.; to manufacture and sell certain nitrogen gathering organisms or bacteria for use in inoculating plants, seeds or soil; J. A. Graves, E. J. Pierce, A. H. Trimmel, J. S. Gormley, L. W. Kennedy; capital, \$180,000.

Mr. Louis Boeglin, head gardener at the Park greenhouses, Minneapolis, has returned from a trip abroad, bringing a nice collection of plants in varieties which had been used in bedding in Europe, but have not yet been well introduced into this country. Among these are some fuchsias, geraniums, begonias, verbenas, variegated solanums, etc. He reports that conditions for employes abroad are better than they ever were. Wages have risen considerably, and the men that have their board with the employers are better taken care of than before. The working hours are reduced to nine hours in landscape and ten hours in the other branches.

In ordering goods please add, "I saw it in HORTICULTURE."

FOR SALE

Greenhouse property consisting of five houses, two each 300 x 16, one 150 x 11, one 200 x 10, one 20 x 12, 1.5 feet connecting sheds. Heated by two 40 horse power, high pressure boilers. Small engine for operating blower. City water. Dwelling-house five rooms and barn. Eight acres of land. Place has been built five or six years. Located five minutes from electric cars, twenty minutes' ride to a city of 50,000 population and about twenty miles from Boston. This affords an exceptionally good chance for anyone desiring to go into the growing of flowers for wholesale, also for a very extensive retail business later on. Possession given any time after July 1st. Place can be bought very reasonable, one half payment cash, balance on mortgage.

HELP WANTED

WANTED—SALESMAN

To Handle Good Side Line
On Commission

One who calls on Florists, Seed Houses, Nurseries, Cemetery Superintendents, Monument Dealers, etc.

The Kramer Bros. Foundry Co.
DAYTON, OHIO

SITUATIONS WANTED

GOOD MEN

When you need good men,
skilled or unskilled, Write:

THOS. H. BAMBRICK

34 South 7th Street Philadelphia

Help of all kinds, including that for Florists, Nurserymen, Seedsmen and the Horticultural trade generally.

SITUATION WANTED—As foreman or manager, by sober, industrious, ambitious young man with long experience on some of the best wholesale and retail places in America; good grower of carnations, roses, and general all-round stock; familiar with steam and hot water, pipe fitting, greenhouse building, etc.; only those having a first-class place, wanting No. 1 stock grown, and who are willing to give a competent man a chance to have success, need answer; good salary expected; references; state full particulars. Address X. Y. Z., Bridgeport, Conn.

SITUATION WANTED in general greenhouse work; single, age 35, five years' experience, commercial. Address W. W., care HORTICULTURE.

FOR SALE

FOR SALE OR TO LET—15 acres of land, nearly all under cultivation; 20,000 sq. ft. glass, house well stocked with carnations, chrysanthemums, etc.; 8-room dwelling house, steam heated; large barn; in a city of 14,000 population, 10 miles from Boston; excellent transportation facilities. Good retail trade now established. Terms will be made satisfactory. Possession given April 1 or sooner if desired. Address A. G., care HORTICULTURE.

FOR SALE—A large consignment of 16x24 double thick American glass, A and B quality. For further information write Parshelsky Brothers, 59 Montrose Avenue, Brooklyn, N. Y.

MISCELLANEOUS WANTS

WANTED,

To buy, to lease with the right to buy, or to lease, several Greenhouses with ground where retailing and landscaping is possible.
Address L. L., care of HORTICULTURE.

VEGETABLES UNDER GLASS.

Read before the Massachusetts Horticultural Society by William Turner.

William Turner of Oceanic, N. J., addressed the Horticultural Society on February 8, on "Forcing of Vegetables Under Glass." Whoever, he said in beginning, wishes to have success in this line, must have a love for the work and watch the developments so as to know when and how to feed them. As a private gardener, he confined his remarks to private establishments in general, and the house he recommended was from 20 to 28 feet wide, with a preference toward east and west, and hot water heat.

"Experience has taught me," said Mr. Turner, "that some soils will take much more food than others. I claim there can be no hard and fast lines laid down in regard to how much fertilizer a certain crop shall receive for best results. My theory has always been that each grower in different localities, and different soils, by studying the condition of his growing crops is the best judge as to how much food will be of benefit. I have no doubt there are various opinions on this one important subject—feeding—but the grower, who carves his own road, using his own good judgment, will usually come out the most successful. We know that to produce good crops, potash, phosphoric acid and nitrogen is a necessity. This should be applied to the soil in some shape or form. I am confident whoever has given this question study and deep thought will stand by his own good judgment; self-taught experience one never forgets. Pages could be written on this one subject alone—feeding.

Lettuce.

"The demand for lettuce is ever increasing, and without doubt this is one of the main winter crops. Whether for private or for commercial purposes, monstrous houses have been built for the lettuce industry within the past few years, which probably twenty-five years ago would have been thought madness. Years ago lettuce was grown on raised benches. It was thought of much benefit having the plants near the glass, but certainly a mistaken idea, for those cool-blooded vegetables. In the first place, it is too hot for the roots; and, second, the plants require too much water on the benches. One great advantage in solid beds is, the crops don't require water very often. In fact, if the surface soil can be kept on the dry side, providing there is plenty of moisture below, the roots then will have a tendency to work down, giving the plants health and vigor, which is all important for best results, but a thorough good watering just as they begin to head will help to increase the size and quicken maturity. Airing plays an important part as regards success or failure with this ever-popular vegetable. The most dreaded fungus or disease is commonly called sunburn, although this is an erroneous idea, as the disease spreads more readily in a spell of dull weather than when it is bright. One thing is certain, when a crop is badly infested it is useless; better throw it out, take the top soil out and replace with fresh

or sterilize the soil, as the only safeguard to eradicate the evil.

Cauliflower.

"Probably there is no vegetable more improved by growing under glass than cauliflower, requiring the same treatment in every respect as lettuce, as regards temperature, solid beds, etc., but the soil used may be of a trifle heavier nature and it is perfectly safe to feed them considerably more than lettuce as they are strong rooting vegetables. Yes, even during the short day this vegetable will respond readily to liberal treatment. I would not advocate starting your plants before say the first week in September. Sow seed according to the number of plants required. Transplant once about four inches apart, than in about three weeks transplant again where they are to mature, in rows eighteen inches apart and fifteen inches in the rows. The first crop should be ready to cut from the first of December on. For a succession sow seed two weeks apart. Cauliflower delights in rich compost, and without doubt a liberal supply of hardwood ashes is a capital fertilizer for this crop. I question if there is another vegetable forced that will take as much nitrate of soda to good advantage as the cauliflower.

Radishes.

"Radishes are easily produced under glass. I have seen it recommended taking a crop of radishes from among lettuce or any other growing crop, the idea being that the radish crop under favorable conditions will mature in about a month from the time of sowing the seed. However, this method I am not in favor of, claiming that one crop at a time is sufficient even if grown under glass. While radishes are of easy culture, it is true, I think that I am safe in stating that many a batch of radishes have been destroyed by the erroneous impression that this crop needs little or no attention. If left in the bed too long they get soft and pithy, comparative useless at that stage. The very best seed obtainable should be used for this purpose. Radishes can be grown successfully with the lettuce house temperature.

Tomatoes.

"Good tomatoes can be had either in solid beds or raised benches. But for the winter months raised benches are decidedly to be preferred. Wonderful progress has been made in recent years. In the quantity of tomatoes consumed compared to years ago, and particularly so with the forced products, not only in the private establishments, but it is also quite a commercial enterprise. In the first place we should aim to start plants so that there will be a good set of fruit before the shortest days set in; this will give a heavy picking through the shortest days. To get this seed should be sown not later than the first of August. Those plants for winter forcing I prefer growing in pots up to five-inch, potting firm; nothing like having stocky, short-jointed, thrifty plants to set in the bench. Tomatoes are not particular as to soil. However, the best is none too good for the work. What I would term a good rose soil would be ideal for tomatoes, with about half the quantity of manure.

Four or five inches of soil is sufficient to mature a heavy crop of fruit. One of the main features in keeping a healthy, vigorous growth is the temperature. I am not an advocate of high temperatures (say 60 at night, 70 to 75 degrees in the day, according to conditions of weather, and give air every available chance, never allowing the foliage to get soft and flabby), then there will not be much trouble with mildew and kindred diseases.

Cucumbers.

"Years ago if we produced a crop of cucumbers in the fall and another in the spring it was not altogether necessary through the shortest days. Now there is a call for them at all seasons. Probably the commercial grower has been responsible for popularizing this vegetable in a general way more than the private gardener, as their produce goes on the market where it is sold broadcast to the public, which naturally causes a brisk demand. I believe I am correct in stating that Arlington growers were the first to see into the possibilities of raising cucumbers on a large scale for market as a financial success, and today I believe Arlington is the largest centre for this ever-growing enterprise. Heat, moisture and careful airing are the important items to contend with. While cucumbers are rapid, vigorous growers, with good treatment, on the other hand any neglect is easily detected by the stunted appearance of their growth. In fact, a severe check is disastrous. There is an advantage in one way with growing the English cucumbers in winter. They need no fertilizing, not unless it is necessary to procure some seed.

Beans.

"While beans are not grown commercially, under glass, they are very acceptable for the private table, and far superior to any that can be procured in the open market during the winter months; therefore, for private green-houses beans are to be highly recommended as a forced vegetable. When grown successfully it is surprising the amount that can be gathered from them. There are two methods of growing this crop—in pots or on raised benches. If grown in pots, half fill six or seven-inch pots with fairly rich, porous soil, then plant about six beans in a pot. As the beans grow keep adding soil by degrees, until filled. It takes about seven weeks to mature a crop grown in a temperature of 60 to 65 degrees at night, with 70 to 75 day temperature. The bench system is my preference, as there is not so much labor and attention required, and results are equal, if not better.

Rhubarb.

"I do not consider the forcing list complete minus rhubarb. There is considerable demand for this wholesome vegetable, both private and commercially. It requires very little attention; the main secret is if the roots are dug for forcing they should get a thorough freezing before they are taken into the forcing house. Also leave as much of the soil adhering to the roots as possible. These roots may be forced successfully in the mushroom house or under the tomato house bench, setting the roots close together, filling in the hollow spaces

between the roots with soil or leaf mould—anything to hold moisture. Every two weeks a fresh supply of crowns may be brought in according to demands. Greenhouse vegetable forcing has come to be one of the important branches of our profession, and appeals readily to the consumer, as they are not subjected to extreme temperatures such as our early garden vegetables are at times. The results are they are tender and can be appreciated by all."

Why U-Bar Greenhouses Excel

Then there is the downright practical side of U-Bar houses, the side that means more flowers, or vegetables of finer quality with less care and expense than in any other houses constructed any other way. The reason for this is, in short — *more light*. You see there is no gutter at the eave — no heavy members — the glass is spaced 24 inches instead of 16 inches. Every structural detail has been reduced to the smallest possible point. Still with all this extreme lightness of construction, there is not a more rigid, enduring house made — and it is the U-Bar that does it. The catalog although filled with U-Bar houses, both exteriors and interiors, also shows plans, sections and all the interesting structural details that you like so well to know—Send for it

342 W. 14th St., New York City

CARNATION CUTTINGS

We are in unusually good position to supply exceptionally well-rooted, healthy stock. We have such a large quantity of flowering plants that we propagate only from heel cuttings from flowering shoots. Our cuttings are rooted in light, sunny, airy houses, and we are sure will satisfy the most critical buyer. A prominent carnation grower writes, "You seem to be the only firm in the business that knows how to pack stock and have it reach the buyer in good condition, and I have always found your cuttings cheaper than the same varieties from others at much lower figures." While our prices may not always be the cheapest, we certainly can give, quality considered, as good value as, if not better than, is obtainable anywhere.

WINSOR which we introduced last year has proved to be the finest novelty introduced in years. We think it is the most profitable variety grown today, considering its fine color, splendid keeping qualities, and productiveness. When properly grown, it leaves little to be desired, and almost every one succeeds with it.

WHITE ENCHANTRESS the best all-round white carnation, on account of its large size, long stem, earliness, and productiveness. Our White Enchantress, exhibited at the Carnation Convention at Washington, was the only White Enchantress exhibited that received an award.

Strong rooted cuttings, now ready for delivery, from sand \$6 per 100, \$50 per 1000; from soil, \$7.50 per 100, \$60 per 1000.

We offer also **Beacon** and **Red Chief**, from sand, \$6 per 100, \$50 per 1000; from soil, \$7.50 per 100, \$60 per 1000. Also **Victory**, **Melody** and **White Perfection** from sand, \$4 per 100, \$35 per 1000; from soil, \$6 per 100, \$45 per 1000. **Variegated Lawson**, **White Lawson** and **Red Lawson**, from sand, \$3 per 100, \$25 per 1000; from soil, \$4 per 100, \$35 per 1000. We can supply, also, **Winona** and **Afterglow** at \$12 per 100, \$100 per 1000.

Buyers will find transplanted stock offered from soil well worth the difference in price

Bougainvilleas

(See Frontispiece)

The Bougainvilleas are natives of South America and it is there that one sees them in their greatest perfection. There are said to be seven species belonging to this showy genus, but there are not more than two species and several varieties in common cultivation.

They are especially valuable when trained as greenhouse or palm house climbers, and will cover the roof and walls to a height of twenty-five or thirty feet. The side branches from one plant when trained out horizontally will cover twenty to thirty feet if desired. When grown in this way they are usually kept dry during the early part of the winter. About this time or early in March the plants are given a thoroughly hard pruning, cutting back the growth of last year to within one or two buds of the older wood and cutting out all weak and undesirable parts. If they are grown in a border the top soil to the depth of several inches may be removed and a top dressing of good turfy loam and cow manure given. If the plants have been kept thoroughly dry a good soaking of water may be given at this time, but afterwards they must be watered sparingly until there is enough new growth to warrant more liberal supplies. By the middle of next May, if the plants are treated as directed, they will have branches three or four or more feet in length and completely covered with large showy bracts. We find these long sprays very serviceable when cut for Class Day and Commencement decorations.

The species that is most commonly grown is *Bougainvillea glabra*. It is very easy to grow and flowers most profusely and has showy bright rosy red bracts.

Bougainvillea glabra variety *Sanderiana* is a much more compact plant than the species and on that account is better suited for pot culture and when well grown makes a capital Easter plant.

Bougainvillea spectabilis is a showy plant but not as easily grown as the above-named species. Sometimes it is very hard to make it bloom successfully. Well do I remember a fine specimen of this species which grew most luxuriantly in the vestibule to the water-lily-house at the Royal Gardens, Kew. Although this plant made magnificent growth it could not be made to flower satisfactorily until it was dug up and most of the roots cut off and replanted in not over-rich soil. Then for some years afterwards this plant flowered splendidly. This species when well blossomed is a most magnificent sight and is much more showy than *B. glabra*. It has large panicles of flowers and large showy bracts of a deep rose color varying to purple.

There is a variety of this plant which is extremely showy and distinct, known as *B. spectabilis* var. *laterita*. This variety is strikingly distinct from any other bougainvillea in cultivation. The habit and form of the plant is very similar to the ordinary kinds. It is the color of the bracts, which is of a brick red, that makes it look so different from all other bougainvilleas. Because this variety is rather hard to propagate it is not as frequently seen as it deserves. The finest specimens I have ever seen of this variety are in Hope Gardens near Kingston, Jamaica, British West Indies. They are grown in large bush form and are at their best in the month of January. They make such an imposing show and the sight makes such an impression that one can never forget it. The Jamaicans propagate this plant by pot-layering; that is, a branch is "ringed" or "girdled" and a bamboo pot which has been divided is put around the part girdled, filling up with soil, and

left in this way until roots are formed. This is the only way they can increase this variety. This distinct variety on account of its showy bracts would make an excellent florists' plant for Christmas.

All other kinds of bougainvilleas are easily increased by cuttings of the half ripened wood. If treated properly in pots and brought along at the right time bougainvilleas would make imposing bedding plants for places like Boston Public Garden and the flowers and bracts would last two months in good condition.

Green fly and mealy bug are two of the worst insects that trouble these plants when they are grown in green houses. The former can easily be destroyed by fumigating with tobacco or Aphis Punk, and the latter when the plants are pruned should be thoroughly syringed with kerosene emulsion.

The scene pictured in the frontispiece of the paper is one that is admired by every person who is fortunate enough to see this wonderful arbor when it is in full perfection during the winter months. It is three or four hundred yards in length and leads up from the street to the main entrance of the Constant Spring Hotel, Jamaica. *Bougainvillea glabra* is the kind that is used on this handsome arbor. One can easily imagine how cool and refreshing it is to walk under a canopy like this in a hot tropical country.

Viburnum opulus Linn.

Another shrub of marked worth because of the beauty of its fruit is the High Bush Cranberry, which is native to our own northern States and Canada as well as to parts of Europe and Asia. It is an upright shrub of robust habit ultimately attaining a height of eight to ten feet. The foliage is good but of no special merit. In summer it is dull green and in autumn it becomes purplish or dull red. The flowers, which appear in late May or early June, are borne in broad flat cymes that are three or four inches in diameter. The perfect flowers, composing the greater part of the inflorescence, are small, white and about one-quarter of an inch across. The outer neutral flowers, which are the really showy ones, are white and nearly three-quarters of an inch in diameter.

The fruit that follows is particularly attractive. When fully grown it is at least a half inch in length. It begins to turn by early August and early in September has become bright scarlet. Normally it hangs on and is showy throughout the winter and not infrequently until early spring.

Like many of the viburnums this can not be classed with the rapid growing shrubs, yet it proves satisfactory in any good soil. It is comparatively free from disease or insect troubles, although it is occasionally disturbed by the leaf curl. However, this is never so serious as in the case of the sterile-flowered form, the Guelder Rose or Snowball. Because of its habit, its flowers and its good scarlet fruit it is desirable for any shrubbery and is especially deserving of place among the best shrubs. In the shrubbery border shown in the frontispiece of last week's issue the white cymes of *Viburnum opulus* are effectively shown.

The carnation growers' burden

The present depression in market values of many standard varieties of cut flowers, unusual in its extent over the greater part of this country, brings to the front questions of grave importance to the grower and, although in somewhat lesser degree, to the flower dealer, the bulb importer and the greenhouse builder. Naturally, comparisons are made between returns for flowers marketed this season and prices realized at corresponding dates last year and in years previous. In this light, carnations, for instance, make a very poor showing, although, so far as quality is concerned, the average product this year is equal to, if not superior to, anything ever before offered. Concealing this fact as to quality the break of from thirty to sixty per cent., or even more in some cases, in prices

for February as compared with those prevailing one year ago must come as a serious disappointment to the carnation growers, a disappointment which the heavier aggregate cut of blooms during this period will not greatly lessen. It is to be hoped that as the season progresses some compensating balance on the other side may yet be experienced and a better general average thus reached than now seems likely, for no class of flower growers has better earned a substantial reward for intelligent industry than have the American carnation growers.

The forcing bulb industry

Undoubtedly the man who has occasion to view the situation with the greatest apprehension is the one engaged in bulb forcing. The market value of this particular product, including lily of the valley, has run of late on the average dangerously near the first cost of the bulbs and not infrequently the returns for the flowers have been considerably below the cost of the bulbs. This cannot go on indefinitely and bulb importing houses, as well as the foreign firms making direct shipments, should prepare themselves for a curtailed demand for next season while those who were over-indulgent in giving credits last fall may have to take some painful jolts. Direct information by cable this week is to the effect that higher prices are contemplated for all French bulbs for the coming season and quotations on deliveries are thus far unobtainable. Considering the experiences of the present forcing season the attitude of American bulb buyers, in the event of higher import prices, should not be a matter of conjecture. The fact that the forcing bulb crop is with a good many growers a sort of filler-in between other crops and that it is not easy to find any other use for the houses in midwinter is not likely to have much weight if the business must be done at an actual cash loss to the grower.

Old style houses at a disadvantage

Some views of the violet-growing question as affected by this year's market conditions and tendencies, as same appears to us, were given in our issue of two weeks ago. A few thoughts on the rose may not be untimely. The rose has been one of the few bright spots in this listless flower season, up to date. There have been seasons in the past when the rose grower has had to face a much worse proposition than anything that has confronted him thus far this year. The explanation is to be found, undoubtedly, in light crops. Indications now favor an increased supply for the weeks to come and with the incoming of Lent and the fact of a late Easter, heavy surplusses seem inevitable. One thing that should not be lost sight of is that the great majority of roses, and, to a considerable extent, of carnations also, which have the quality necessary to find an appreciative market now-a-days come from establishments having modern-type houses. Conditions are rapidly approaching that stage where a living income can no longer be easily extracted from the growing of roses in any but the modern light and spacious type of house and the rose grower limited to equipment which, a dozen years ago, was ample and remunerative will then be at a great disadvantage. Cultural ability is, of course, an indispensable factor in any case, but cultural ability confined in inadequate houses is badly handicapped when forced to compete against equal cultural skill backed by the modern "rose factory" outfit. If we mistake not, the up-to-date greenhouse builder has lively times in store for him in the near future.

Pinus aristata—Foxtail Pine

It is strange that this unique and charming tree has not been more extensively propagated. Isaac Pollard of Nehawka, Nebraska, has a fine specimen and we find now and then one growing in different parts of the country and there is no reason why they should not be grown more extensively. People little realize what a wide diversity of beauty and attractiveness a large variety of evergreens will give us. Each seems to have an individuality of its own. A single species will branch out into many divergent forms and variations. The Douglas Spruce for instance, has about fifty named varieties.

Pinus aristata is often called Bristle Cone Pine and sometimes Hickory Pine. I can not forget the first one I ever saw. My friend and myself had been climbing mountains till we were completely tired out. We were at an altitude of about 9000 feet among the Engelman and Pungens Spruce. We were lying down in utter exhaustion. In the distance, we saw a pine different from anything we had seen before and we thought we knew every tree in the Rockies. Our curiosity got the better of our weariness and we went to interview our new acquaintance. We lay down on a hillside near by to look the tree over, and then we both broke out into a hearty laugh. "What can it be?" asked my friend. "Haven't you ever heard of the Foxtail Pine? Here we have it." It seemed as if hundreds of foxes had rushed to a common center, all headed toward the stem of the tree and their tails had all turned green. How we laughed and laughed again over that strange spectacle which seemed half tree and half animal. Higher up, we found a grove of them. The same kind with different ages and slightly different forms. Some little, some large—grandmothers, children, and grandchildren. Farther up, in higher altitudes, we found quite a forest of them. Our collectors in the Rockies expect to secure a large amount of seed and a lot of seedlings for the Nebraska Experiment Station at York, next year. It is fortunate that a fine tree like this, growing at such a high elevation, can endure the heat of our western prairie. There is no reason why nurserymen cannot grow these by the thousands, and so add to the number of the beautiful evergreens with which we can adorn our homes.

One thing we find and that is we cannot raise all kinds of evergreens successfully in the peculiar soil and climate of Nebraska. The Engelman and Colorado Blue Spruce can not be raised successfully here. So we have started a branch nursery at Paynesville, Minnesota, under the care of Frank Brown, who goes into his forests and digs up beds and plants the seeds in the leaf mould and there he is meeting with wonderful success. All these high altitude trees will be successful in the North.

The *Aristata* of the western slope is one of the most charming trees of the Sierras. The needles are clothed with a glossy sheen or polish—often with a silvery tinge. Sometimes there will be one of ideal form, with straight trunk, from which branches extend in pyramidal form, in beautiful symmetry from the crown to the earth, all those outer limbs harmoniously dressed in beautifully rounded glistening foliage. Some trees have been found on the western slope that were five

feet in diameter and ninety feet tall, but this is exceptional.

I am not familiar with the wood of this tree but judge from the name, Hickory Pine, which is sometimes given it, that it must be the toughest of all the pines.

C. S. Hamman

York, Neb.

Clianthus puniceus

This beautiful cool greenhouse subject I have never had the opportunity of laying my eyes on since my apprenticeship days in the north of Scotland, and have ever wondered since that such a beautiful, even gorgeous flowering climber, should thus far have been overlooked by our enterprising plant importers. That it is practically unknown in plant collections on this side of the Atlantic is pretty nigh conclusive, as there is hardly, if any, reference made to it in our horticultural literature.

Unlike *C. Dampieri*, the former is an easily grown subject and entirely devoid of the milky characteristics associated with *Dampieri*, yet the latter is far more widely known, doubtless on account of its more gorgeous flowers, the dark purple spot so conspicuous on the standards of the flowers adding much to its effectiveness; otherwise they are of equal showiness, the flowers of both being scarlet.

C. puniceus possesses robust growth habits, and somewhat resembles in vine, growth and leafage the well known *Swainsona*, only a little larger and stouter in its parts. Its peculiar parrot-bill flowers are freely produced in bunches containing many flowers. It is not fastidious as to special soils yet good friable soil as that is understood will play an equally important part in its successful management as it really does with other plants. Planting out in suitable narrow borders is the easiest and best way for arriving at effective displays, as indeed it is with most all strong-growing climbing subjects, and notwithstanding what may be done in other methods, such as ample pot or tub culture, very fine results may thus be produced. Red spider is partial to these plants, but no excuses can be offered for red spider mastering the cultivator so far as *C. puniceus* is concerned, for it can withstand syringing or hosing to any reasonable extent and feel the better for it.

This, however, must be somewhat modified as regards *C. Dampieri*; although moisture must be present to ward off red spider or thrips, it is best applied in the evaporated form; frequent syringings according to weather conditions within the precincts of the plants, with an additional absorbent material strewn around them, particularly tobacco stems, will accomplish the necessary remedy. The leaves of the latter variety being soft and woolly in texture do not take kindly to over-head shower baths. It is best to grow this variety from seeds annually, while *C. puniceus* can be raised from cuttings in the general manner. The latter is frequently used as a stock plant for grafting the other on, for the purpose of overcoming the aforesaid milfulness of character, root disturbance being one of its dislikes.

W. D. Burdison

AFTER ADJOURNMENT

We don't believe in green carnations or any other dyed blossoms and regard the indulgence in such monstrosities as a disgrace to the florist business. We do believe in the shamrock, however, as a beautiful little emblem of St. Patrick's Day. Many more of these plants might be sold. See advertisements of these in this issue. These people have the "rale thing."

We extend congratulations to the floral fraternity of Hoboken and contiguous New Jersey territory on the opening of transportation through the new "tube" under the broad Hudson River by which quick and sure access to New York markets is at last assured. No longer can New Jersey be classed as a foreign country. John Birnie and his loyal German clan are now in the United States, glory be.

When a man of such literary prominence as W. D. Howells assumes responsibility for the absurd statement quoted in our seed trade column in this issue, it would seem that in providing horticultural instruction for the public school children we are not going far enough. Why not establish night schools where people such as Mr. Howells, whose opinions carry weight with the public, may have an opportunity to learn a few of the first principles of botanical science and acquire a bit of commonsense concerning plant life?

H. Suzuki of Yokohama, Japan, who is visiting this country for the first time in fifteen years tells us that there are no less than five hundred private conservatories in the neighborhood of Yokohama and Tokio all built within the past few years and the demand for orchids and other conservatory material is increasing so rapidly that within five years it is expected that the number of establishments devoted to their culture will equal that of the most favored districts of England. Horticulture in Japan is evidently very much up-to-date.

They were alone in the conservatory, says the Cleveland Plain Dealer. He turned to her. His voice was low, but passionate.

"You know," he said, "why I have asked you to come here. Will you be my wife?"

She looked at him intently.

"No," she answered, and she uttered the monosyllable as if she loved it.

No doubt she expected him to reel and clutch at something, but he did nothing of the sort.

"Very well," he briskly said, "that's all I want to know. Shall we go in and finish our dance?"

She stared at him in wonder.

"Aren't you hurt by my refusal? Don't you intend to do something desperate?"

"Desperate? Certainly not. Unless you call tackling the lobster salad desperate."

Her pride was sorely wounded. She had meant to hurt him. It would have been a proof of her power. Now she hungered for revenge. There was only one way to get even with him.

"George," she said, "I have reconsidered my decision. I will be your wife."

And the two scrawny rubber plants and the three yellow palms quivered with suppressed laughter.

The rubber plants and the palms do occasionally get a chance at something worth seeing and hearing. But it's in order for the Cleveland florists if there are any left in that town, to take

steps to eliminate the "scrawny" and "yellow" relics from the sight of the Plain Dealer man.

APPLES IN THE NORTH WEST.

Pomologists and geologists alike agree that the soil of the Spokane country, especially in the valleys, is remarkably rich and almost inexhaustible and adapted to the successful growth of all kinds of fruits, and, to emphasize this fact it may be noted that the district produced \$14,000,000 worth of commercial fruits, more than 60 per cent. of which was in apples, in 1907. The importance of this branch of the industry will be better appreciated when it is known that almost 100,000 acres of land, or more than four full townships, were devoted to apples alone last year, which shows an increase of from 20 to 30 per cent. in bearing trees over 1906. The coming year will show a gain of 27 per cent., while that for 1909 is estimated at from 50 to 75 per cent. and more than 100 per cent. in 1910. The value of the fruit produced in Spokane county, by no means the largest in eastern Washington from a horticultural standpoint, is placed at \$2,894,165, of which \$1,827,065 was received from the sale of apples.

This is looked upon as a remarkable showing when it is considered that only a few years ago not enough fruit was raised to supply the local markets.

The prune crop probably was the next in importance, and this was followed by strawberries and pears in the order named, while peaches, cherries, grapes and melons came as indicated. The grape crop fell short of expectations, because of the curtailed production in the Snake River and Clearwater districts, but the quality was of a grade to make up for any monetary losses.

That the apple is the chief orchard product of the Inland Empire as well as the national fruit is not questioned, and it is known also that those grown in Washington, Idaho and Oregon are in demand the world over; in fact, the highest market prices are paid in New York, Chicago, Boston, London, and cities in Australia for the big red-checked apples that grow so plentifully in this part of the country. Another thing that became manifest last season was that while the crops in the older apple belts in the middle west and eastern states were either failure or less than 20 per cent. of the usual production, the yield in the Spokane country was the largest and best from the standpoint of color, size and flavor in its history. Apple buyers from Chicago, New York and Boston commission houses, representing also exporters, were active in the district throughout the picking and packing season and high prices were the rule.

The shortage of labor and the lack of adequate transportation facilities during the harvest resulted in a waste, estimated to have cut down the total output by from \$2,500,000 to \$3,000,000 on apples alone.

England is the market of the world; it draws its supplies from all parts, and is the only nation that allows all products to enter her market duty free, thus securing for its people the best and largest variety of the world's products, one of the most conspicuous

and foremost of which is the far-famed "American apple," the qualities of which have procured for it a name and has doubtless been the origin of the saying, "An apple a day keeps the doctor away." It is known that the trade on this fruit has, from a small beginning, now acquired enormous dimensions, not only in the Inland Empire, but throughout the Pacific north-west, and the season just closed shows the healthy state it is in, and how rapidly it is increasing.

HEARD AT DINGEE & CONARD CO.'S.

Our Philadelphia representative called at the establishment of Dingee & Conard Co. a few days ago and found that this firm had added mushroom growing to their already large list of special subjects and with gratifying success. Mr. Lynch said:

"We are shipping now about 600 lbs. a week, and the crop has been on since November. Prices were low at first, but we are now averaging 60c. a pound, which is a very satisfactory figure when the crop is good.

"Cannas have always been a great specialty with us, and we may claim with all due modesty to have done our share in improving and popularizing them. Here is one called the 'Sweet Scented Canna'—botanically *Myrosma cannaefolia*. Flowers white, fragrant as an orange blossom.

"Another oddity you don't often see we have here is the 'seedless fig'—the genuine variety—in 4 in. pot plants with well developed fruits. This is a relic of the late talented but eccentric Patrick Meehan, who was in our employ at one time and left behind him many new roses and other things which he had developed by hybridizing and otherwise.

"No money in little palms at a quarter? Don't you believe it. We grow them from seed in six months and find them a very satisfactory item.

"Yes, *Oxalis Ortigiesii* is old, but still unexcelled as a window plant. We never have enough of it."

PERSONAL.

E. Jenkins, Lenox, Mass., has gone to England for a two months' vacation, during which time he intends visiting some of the old-fashioned gardens of England.

Visitors in Boston: Henry Wild, Greenwich, Conn.; H. A. Jahn, New Bedford; Wallace R. Pierson, Crowell, Conn.; H. S. DeForest of Pierson V-Bar Co., New York.

Chas. W. McCauley, secretary of the Florists' Club of Washington has been confined to his home for some days with a mild form of blood-poison as a result of a nail wound in his foot.

Secretary John Young of the N. Y. Florists' Club is about again after the serious injury to his wrist due to a fall on the icy sidewalk. It will be some weeks before he can use his injured arm.

Visitors in Chicago: Wm. Dykes, representing Ed. Jansen, New York; Wm. Desmond, representing L. S. Donaldson Co., Minneapolis, Minn.; Otto Will, Minneapolis, Minn.; S. Wertheimer, New York City.

NEWS OF THE CLUBS AND SOCIETIES.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

This club had a rousing meeting on Tuesday evening, February 25. The special attraction for the attendance of over two hundred members was a promised talk on Carnations by Wallace R. Pierson and an exhibition of carnations and other flowers from various sources in connection therewith. Mr. Pierson's address fully justified the advance interest and was pronounced one of the most intelligent and practical talks ever listened to by this or any other florists' club. The exhibition was also up to expectations and it was a late hour before the meeting dissolved.

After the usual routine proceedings, President Westwood addressed the club in optimistic strain, urging the cultivation of the closest fraternal relations between the members and aggressive loyalty to the organization during the year now entered upon, emphasizing the splendid possibilities of harmonious co-operation in the service of the club and, in grateful appreciation, thanked the various officers and committees of the past year for their earnest effort and well-done work. He appointed committees on exhibits and on refreshments for the present year, George M. Anderson being made chairman of the former and J. P. A. Guérineau of the latter.

Letters were read from F. R. Pierson, regretting his inability to visit the club on this occasion by reason of an accident which had incapacitated him for the present, and from President K. L. Butterfield of Amherst Agricultural College, extending an invitation to the members to visit the college in a body in August next. An invitation was received from the managers of the Market Flower Show to attend the exhibition on Saturday next. Announcement was made of the intention of the Executive Committee to arrange for a club banquet at an early date. Nine new members were added.

Mr. Pierson's lecture will be found on another page of this paper. At the close he was fairly bombarded with questions on various phases of carnation culture, all of which he answered with a convincing directness which showed him to be a master of his profession. Briefly, his replies were to the effect that in the treatment for red spider on carnations he had found soap one of the most efficient weapons and cuttings from infested plants dipped in soap solutions had been effectually cleaned. The same method with Bordeaux mixture 4-4-50 had freed cuttings from any infection of rust. He decried the disposition to take off cuttings before plants are ready for this, in the struggle for the "almighty dollar," and dwelt upon the essential qualifications of a good-substantiated, well-built flower, which are possible only under cool growth and rational treatment. Common sense, he asserted, was the best application for successful carnation growing. Deformed buds are frequently the result of unwise applications of sheep

manure, and pulverized cow manure, which will analyze to the value of \$2.50 per ton is an extravagant investment at \$20.00 a ton. He said that he uses more lime than all the fertilizers together and that among the most essential requisites for the production of fine flowers, he would place first, cleanliness—clean glass, clean atmosphere, clean benches and clean under the benches. His selection of six of the best carnations of the day would be, in order of preference, the following: Winsor, White Perfection, Beacon, Enchantress, White Enchantress and Rose Pink Enchantress. Vociferous applause and a standing vote of thanks was Mr. Pierson's reward.

President-elect M. A. Patten of the American Carnation Society, being called upon and received with enthusiasm, thanked the Club for his reception and asked for the support of the members for the meeting of that Society at Indianapolis next year, assuring them that they would find much there of interest and profit to them. Western soil and conditions are more favorable for the production of large and showy flowers but in keeping qualities the eastern grown flowers excel. Mr. Harrison, just arrived from England and intending to make his home in this country henceforth because of its brighter sunlight in winter, made a very interesting little speech on the comparative horticultural conditions as he had observed them.

Arranged with careful attention by the ever-ready Kenneth Finlayson, the exhibition platform presented a brilliant picture. Chairman Anderson of the judges made report of awards as follows: Awards of superior merit to A. N. Pierson for *Adiantum Farleyense*; to A. Roper for carnation Bay State, variegated. Superior mention to Wm. Nicholson & Son for carnation Afterglow. Honorable mention to F. H. Kramer for rose Queen Beatrice; E. B. Beals for white seedling carnations; H. W. Field for carnation President Seelye; J. D. Cockerott for carnation Harvard; John Barr for seedling carnation; Wanoka Greenhouses for carnations Wanoka and Climax; Peter Fisher for Ward seedling, Mrs. Tom Harvey; A. Roper for seedling carnation; H. A. Stevens, for seedling carnation; Joseph Fuller for double blue lobella; H. A. Jahn for carnation Lloyd and Jahn's Crimson; Wm. Downs for *Bougainvillea glabra*; Mrs. J. P. Snow for carnation Andrew Carnegie, scarlet sport from Harlowarden; E. A. Wood for scarlet seedling. The thanks of the club were extended to John M. Flood for carnation Beacon; J. N. May for Manda's seedling carnation; John Cook for rose My Maryland, certified at previous meeting; M. A. Patten for four vases of seedlings; A. N. Pierson for carnations Queen Louise and Winsor; Peter Fisher for carnations Beacon and Winsor; L. C. Mansfield for seedling carnation; Lively & Bond for seedling carnation; Duncan Finlayson for *Schizanthus Wisetonensis*; Wm. Downs for *Dendrochilum glutaceum*.

CHRYSANTHEMUM SOCIETY OF AMERICA.

The Chrysanthemum Society of America, realizing the necessity of closer relations with the various horticultural societies throughout the country, and agreeable to a vote taken at the annual meeting in New York City on November 6th, 1907, the executive committee cheerfully invites the hearty co-operation of every horticultural society in the United States, and offers the following for their careful consideration:

Any horticultural society, or gardeners' or florists' club may become affiliated with the Chrysanthemum Society of America on payment of an annual fee of twenty-five dollars, such fee entitling it to the following privileges.

1. The C. S. A. will offer a substantial silver trophy as a prize for chrysanthemums; the character of the class, and conditions of the competition to be left to the discretion of the society so affiliated.

2. To receive twelve copies of the C. S. A. publication, free of charge.

3. To have two free passes to the annual exhibition of the C. S. A.

4. To elect one of its members as a delegate to the annual meeting of the parent society, with voice and vote on any subject, except matters of finance, such delegate to be annually elected by the society affiliated.

Conditions of Affiliation.

Subject to the foregoing, the affiliated society shall pay the above mentioned fee on or before April 1st of each year to the secretary of the C. S. A. and furnish the following information:

(a) The full title of the society, the name and address of the secretary, and the name of the delegate elected.

(b) The date on which the next fall show will be held, and the conditions under which the C. S. A. trophy will be given.

(c) A copy of the prize schedule of the affiliated society to be sent to the secretary of the national society as soon as possible after publication.

DAVID FRASER, Sec'y.

AMERICAN ROSE SOCIETY.

A meeting of the Executive Committee is called for today, Thursday, Feb. 27, at 4 P. M., at the Hotel Martiniue, New York, by order of President Simpson, to take up the assignment of the numerous special premiums offered for the annual meeting and spring show to be held in conjunction with the Florists' Club of Chicago on March 25, 26, 27 in the beautiful Blackstone Hall of the Ar. Institute, corner of Adams street and Michigan avenue, Chicago, Ill.

There are now some thirty premiums besides the list printed in the official schedule, to be entered in a supplementary list.

The Chicago people are in dead earnest and we desire the active co-operation of each person east of the Allegheny Mountains to show what they can do.

BENJAMIN HAMMOND, Secretary

ILLINOIS STATE FLORISTS' ASSOCIATION.

The third annual convention of the Illinois State Florists' Association was held at Springfield on February 18 and 19 in the midst of the severest storm of the season. President A. C. Brown of the Springfield Florists' Club opened the meeting and introduced A. G. Murray, representing the Mayor, to whom Phil. J. Foley responded, reviewing the work already accomplished and urging co-operation to secure the opportunities that are before them. The address of President Albert T. Hey was rich in suggestions for broadening along present lines, and systematizing their efforts. As a committee on the National Flower Show he appointed F. L. Washburn, W. N. Rudd, W. L. Kroeschell; on State Fairs, J. F. Ammann, Geo. Asmus, A. T. Pyfer. Officers were elected as follows: A. T. Hey, president; J. F. Ammann, secretary; Geo. Asmus, vice-president; F. L. Washburn, treasurer. E. G. Hill was elected an honorary member. On Tuesday evening a banquet was tendered by the Springfield Florists' Club at the St. Nicholas which was enjoyed by about 125 guests. Hon. Chas. E. Hay acted as toastmaster. The trade exhibit filled Arion Hall, was well arranged and very comprehensive.

NEW ORLEANS HORTICULTURAL SOCIETY.

A meeting of the above society was held February 20. Owing to the illness of Secretary C. R. Panter, Paul Abele acted as secretary. Plans for the chrysanthemum exhibition were assigned to a special meeting, to be held on March 5. J. A. Newsham stated that he intends to leave for Central America in a few days, and he will pay special attention to orchids. Richard Eichling, grower for U. J. Virgin, exhibited fine Roman and Italian hyacinths, narcissi, lily of the valley, and callas. J. A. Newsham also showed extra large callas. Abele Bros. showed sweet peas, grown in the open.

CHAS. R. PANTER, Secy.

SOUTHAMPTON HORTICULTURAL SOCIETY.

A meeting of the society was held on February 20. President Clark in the chair. It was decided to hold a show some time in August on the grounds of the Art Gallery, as Mr. S. L. Parrish has generously offered them for this purpose and has donated a tent for use. The subject of the evening, "Planting of trees and shrubs" was very ably handled by treasurer J. King in an interesting paper. Discussion on tree pruning followed. At the meeting on March 5, "Vegetables and how to grow them" will be presented by J. Griffin.

U. G. AGER, Secy.

NEW YORK FLORISTS' CLUB.

L. C. Corbett, horticulturist of the U. S. Department of Agriculture, Washington, D. C., will read a paper at the meeting of the New York Florists' Club on March 9 subject, "Preparation of Soil for Greenhouse Purposes."

NATIONAL FLOWER SHOW COMMITTEE.

Chairman W. F. Kasting has instructed me to call a meeting of the National Flower Show Committee, to be held in Chicago, March 26, at 2.30 P. M. The place of the meeting will be announced later. This date is during the meeting and exhibition of the American Rose Society in Chicago. Very important business will come before the committee, and each of the chairmen of minor committees is expected to report. The presence of every member is earnestly requested.

J. H. BURDETT,

Secretary pro tem.

TWIN CITIES FLORISTS' AND GARDENERS' CLUB.

This club met at the Park Greenhouses, Minneapolis, February 18, with about seventy present. After inspecting the greenhouses and stock, a business meeting was held. The committee appointed to prepare a schedule of prices for bedding stock reported a minimum price for the various classes of plants, both-retail and wholesale; with a few changes this list was adopted. Plans for summer work and means for obtaining better accommodation at the State Fair were discussed, and a paper was read by A. S. Swanson.

CLUB AND SOCIETY NOTES.

The last meeting of the Detroit Florists' Club was called off owing to a heavy blizzard.

There will be a regular meeting of the Florists' Club of Washington on March 1st, when the election of officers will take place.

Pres. Kenyon L. Butterfield, Amherst, will address the Massachusetts Horticultural Society, Boston, March 7; subject, "Agricultural Education in the Public Schools."

The Spokane Floral Association, Spokane, Wash., at their meeting on February 11 took steps for the formation of an aster association, the membership fees to be used for cash prizes at the annual aster fair.

At the Rose and Carnation night of the Lenox Horticultural Society, Lenox, Mass., March 7, special premiums will be awarded by the society, and as carnations are grown quite extensively at Lenox competition for the various honors will be keen.

HORTICULTURE'S REPRESENTATIVES.

The following named gentlemen represent this paper in their various local districts, and are authorized to accept subscriptions, advertisements and news items:

BUFFALO, N. Y.—E. C. Brucker, 385-87 Elliott St.

CINCINNATI, OHIO—Frank W. Ball, 31 East 3rd St.

DETROIT, MICH.—Frank Danzer, 1487 15th St.

INDIANAPOLIS, IND.—George B. Wiegand 1610 N. Illinois St.

NEWPORT, R. I.—David McIntosh, Ledge Road.

MINNEAPOLIS, MINN.—C. N. Ruedinger, 2924 So. Aldrich Ave.

PHILADELPHIA, PA.—George C. Watson, Dobson bldg., 9th and Market Sts.

PITTSBURG, PA.—James Hutchinson, corner Duquesne and S. Negley Aves.

TOLEDO, OHIO—J. L. Schiller, 929 Prouty Ave.

COMMERCIAL CARNATIONS.

By Wallace R. Pierson, at Gardeners' and Florists' Club of Boston, Feb. 25, 1908.

I do not have any intention in writing this paper of giving history. That branch may be useful but it has been covered so many times that to go back to Lizzie McGowan and Mrs. Fisher is useless. We wish to consider just what working materials we have before us at the present time, and to learn how to make the most of what we have.

The carnation after the advent of Mrs. Lawson and the carnation before that time are as different in all essential characteristics as the light of a gray day in winter is to the brilliancy of the houses in full sunlight with the glare from the February snow. Day-break before Mrs. Lawson, as the sun breaking through the fog.

We have today a grand collection of varieties and there are so many new stars appearing and asking recognition that we are tempted to ask, where will it stop. "Because of the success of some new varieties, and because I have a good seedling, am I not justified in putting it on the market?" is the question we are so frequently asked. Let the owner of the seedling think of the number of horses bred from fast stock which are never entered. They are tried out, and if they haven't the ability to deliver the goods they are never entered in the race. So with the carnation seedling. Raise them if fancy leads you to do so. Try your hand at it, but know before they are presented to the public what their powers really are.

I believe that the qualities which go to produce a good seedling are, to a large extent, due to the inherent good qualities of the parents, but with the seedling there is apt to be an increase in vigor. The best articles and papers on the subject of seedlings can only be from those men who handle and study them most, and although a haphazard seedling may make good commercially, the best variety is more apt to be produced by one who understands the varieties he works on, and who makes his crosses with certain definite points in view.

The dissemination of a seedling being decided upon, the future success of it as a variety depends as much on the manner of producing and sending out the stock as on any inherent good qualities it may have, granted, of course, that it would never have passed the seedling stage had it not some of the inherent qualities which go to make up a Commercial Carnation.

What then is a Commercial Carnation? To be brief, it is one which the grower can handle so that it is a paying proposition for him, and this necessitates its being one which the public will buy with profit to the retailer. This definition is broad and yet it covers, I believe, the entire situation. It does not exclude the fancy sorts, providing they can meet the terms, which the public will buy and which is a paying proposition to the grower.

A very large bloom is not as a rule obtained in the same quantity from the same space as a smaller one. Here then seems to be the size limit. Can we secure enough more money for the individual bloom to warrant the growing of only such varieties as produce flowers larger than the ordinary? Per-

haps with some growers there would be such a demand but not as a rule would this be true. The Commercial Carnation in its broadest sense is the medium sized bloom, the average length stem, the non-bursting calyx, the even-colored bloom, with the keeping and shipping qualities which are usually a part of the make-up of such bloom as I have tried to describe. Light Pink, Intermediate Pink, Dark or Cerise Pink, Scarlet, Dark Red and White we must consider standards.

Variiegated we must class as fancy for both White and Yellow Variiegated are profitable only when grown where there is a market which calls for them.

The number of bloom per square foot of bench and the number of dollars per year is the only question the commercial grower should consider. The average number of bloom per plant is a deceiving method of calculating the profitableness of a variety, for one plant of some varieties will occupy the same space as three of a different type which run to bloom and not to plant.

Then too one year's experience with a novelty is not always a proper guide if the results be shown merely on paper. A different handling may produce different results. Very few varieties become disseminated without having some good features, and while one variety may do well in a locality, another may not. This is the nature of the beast, and having in mind several that have failed me, and done well elsewhere, I will drop the subject.

Given, then, a stock of standard varieties, what is the best method of handling them all the way through? To this I reply, with consideration for the individuality of each and every variety in your list. I will try to explain myself on this subject.

Three distinct classes of varieties appear to me. One inclined to soft, heavy foliage and curly leaves. This type is inclined to come short jointed, and to require an unusually heavy body of roots to produce early bloom with stems long enough to be worth the handling. For these there is nothing but indoor culture to secure the best results.

The second class is the doubtful one. The thin foliaged, loose jointed specimen which makes only bloom if grown inside and very little plant. It needs less soil, and with less top makes correspondingly less root. Field culture with early benching seems the best, as the production of plant is easier to accomplish in the field.

As a type of the third or variable class, I wish to mention Enchantress, a variety which will be found superb for indoor culture, and an easy variety to lift from the field, even as late as September to fill the last ends and prevent loss of space.

Classing these varieties then, as we do, we plan our planting as soon as we can determine how much room we can count on after Easter. The condition of the breaks from ten to twelve inches above the soil in February will determine this. Get the heavy foliaged varieties ready for an early start. Then comes the wait for after Memorial Day, and the summer's shifting is in full blast, aiming always to leave a part of a house of White and some Enchantress for the last of June.

We like to handle young stock in

pots for the April benching, and in 3-inch is a convenient size to handle, this stock having been shifted from 2-inch, or 2 1-4, as the case may be. Where this stock has been in 2-inch, however, a shift to 2 1-2 inch and then to 3-inch is to be preferred to a single repotting.

For later use, benching out in shallow soil about 4 inches apart gives a better chance for the plants, and means less work, and danger of loss or stunting due to being pot bound is avoided.

Field planting from 2-inch pots is the next in order, and then the care in the field. Summer watering I do not approve of, and for the following reasons: It is very seldom that the soil takes up this moisture to any depth. If done at night, the sun of the next day takes more even than was given. A continual wetting of the foliage at night is a great incentive to leaf spot, and a growth under these conditions will be soft and is therefore an easy subject to such fungus.

The best plants come from the field that gets the most hoeing, and I do not think a well cultivated field can be improved upon, except by more hoeing.

Our system then is a combination of the two, or rather three methods: Pot culture, bedding them out in the houses intended for chrysanthemums, and field culture.

"Would you plant them all inside if you could?" is a question I am often asked, and I can only answer it by saying that it is an impossibility to handle all our stock with any one method. Our supply of bloom is broken for only two months, as we cut by September first from the first planted houses, and our last houses we aim to plant in early July and do not care to cut from them until November.

Last season we planted one bench in March, and they are still looking well and producing the bloom.

"Do you prefer the bench to the solid bed?" is another. I will answer it by saying that for early planted stock the bed is superior; for field plants I prefer the bench. The heavy foliaged varieties seem to be in their element on the beds, while the others seem to even up matters.

Temperatures can almost be figured by classes, the heavy foliaged varieties, as a rule, standing for a little more heat. The evenness of the night temperature is perhaps the most essential. Very seldom have we had any trouble with bloom which could not be traced to this source. Softness in such varieties as Enchantress usually means an overabundance of water at the root, or a too high temperature at night. A hard bud is usually a check from contact with glass, or cold draughts of air at some time, due perhaps to a sudden drop in temperature, or a broken glass. If we would grow carnations well we must watch their nights.

The producing of the best is on-long struggle. Insects, fungi and temperature all make it a never ending fight. Watchfulness, combined with common sense and the willingness to do hard work, will succeed in meeting these troubles, and coming out with success and credit.

To the retailer I would say, "Help the grower." What sells best with you? What colors are you wanting

most? Advise him how they keep, and he'll know how to run the houses.

And growers, let me say to you that it is poor economy to grow second-class stock because business is dull this season. On good stock depends your future, for it is one of the essential elements of success.

POINTS ON CARNATION BREEDING IN AMERICA.

Read before the joint meeting of the American Carnation Society and American Breeders' Association by C. Willis Ward, Queens, N. Y.

(Continued from page 242)

Color Percentage in Various Pedigree Crosses.

In order to render the study of pedigrees easier, I have devised a system of "bench-cards" which are used as labels tied to each variety under experiment, and which at the end of the season are filed away in a card index, thus preserving all of the original records made in my work. I find this system exceptionally useful, as it enables one to determine at a glance the pedigree of any variety when working upon it. My object has been to study out some system whereby the color tones might be purified, and rendered more brilliant or delicate and more pleasing to the eye; and while I have paid some considerable attention to size of flowers, freedom of bloom, integrity of calyx, length and strength of stem, and fragrance, the purity of the color has been my first consideration. In order to develop more brilliant shades, I have, as a rule, confined my crosses to plants both bearing flowers of the color which I desire to improve that is to say, crimson were crossed with crimson, light pinks with light pinks, dark pinks with dark pinks, whites with whites, and so on; and the result seems to indicate the following hypothesis, viz., that the percentage of color contained in the percentage for several generations back controls to a very large extent the color of the progeny. I do not, of course, mean that by using parents on both sides that have practically a scarlet pedigree for several generations back all scarlets will be invariably produced, but that where such parents are used, the chance of securing the improved scarlet color desired are greatly increased. True, the progeny of such parentage frequently show many shades varying from the red or scarlet, such as pinks, maroons, purples, and even white and yellow grounds with more or less variegation of all of the colors mentioned. Again, a cross between a white variety, having practically a white pedigree for several generations, frequently pro-

duces scarlet flowers, but, as a rule, such scarlets are not as brilliant or persistent as those produced from plants having mainly scarlet pedigrees. One of the best ways of providing this hypothesis is to take two scarlet parents the pedigrees of which are mainly white. By crossing these, very few scarlets will be produced—sometimes none at all—but a large percentage of the progeny will frequently be pure white, or white grounds marked with scarlet or various shades of pink. I have sometimes thought that by taking a scarlet variety of comparatively pure scarlet pedigree and crossing it with a white variety of the pedigree of which is largely scarlet, more clear and persistent scarlet tones are produced than where the pure scarlet pedigrees are used. For I have often found that with pure scarlet pedigrees there is a tendency for the color, even though it be very brilliant, to blacken, or turn a slaty shade when exposed to bright sunshine.

Working for Early Blooming Character.

While I have not been able to prove to my satisfaction that this hypothesis is right, there still seems to be evidence enough to warrant the assertion that if you desire free-blooming habits use parents having early free-blooming pedigrees. The same should hold good if you desire to produce varieties with extra large blooms, or perfect calyx, or any other peculiarity in habit or form of flower; it also seems to hold good in regard to fragrance. Again, the early-blooming varieties usually have small to medium-sized blooms, and the very large flowering varieties are generally late and inclined to be shy bloomers. This can to some extent be overcome by crossing large-flowering late-blooming varieties with the early free-blooming ones which have the largest blossoms. This, if followed up, will in the end produce large-flowered early-blooming varieties. Working on these lines, I have already succeeded in producing "Alma Ward," which under our intensive culture gives flowers ranging from 2.1-2 to a little over 4 inches in diameter on stems from 2 to 3 feet in length, according to the season; and those flowers are produced in sufficient abundance to make the variety very profitable commercially. It is also a fairly early bloomer, coming into flower by October 1. This variety was obtained by crossing "Prosperity," a large-flowered, not very free variety, with a white seedling having a very large flower and long stem, and quite a free bloomer.

Mr. Peter Fisher, the raiser of "The Lawson" and "Enchantress," two of the most satisfactory of our American commercial varieties, secured his strain from crosses between "Daybreak" and a sport of "Tidal Wave," two quite large-flowered very free-blooming as well as early varieties. In "The Lawson" a curious blend-

ing of the qualities of both parents may be observed. "Daybreak" is a long-stemmed variety; "Tidal Wave" usually has quite short stems in the early part of the season, but as the season advances they become as long as those of the present "Daybreak." Double flowers may be produced by crossing single blooms with pollen from very double ones, and the more double the pollen parent is, the greater seems to be the proportion of double-flowering seedlings produced.

Influence of Ancestry.

Studies of color characteristics during the past twelve years seem to have determined that the male parent does not exercise any paramount or dominant influence—but that either male or female or both may determine the dominant characteristics of the progeny.

In the case of seedlings used from other hybridizers, I am not able to give the color parentage, but expect if we had such color parentage it would not tend to change the results. My conclusions from these studies have led me to believe that it is not either parent that exercises dominant influence upon the hybrid, but there may be several elements which tend to control the characteristics in the hybrid. As for instance, the total percentage of the characteristics of a number of ancestors which may be illustrated as follows: Supposing that crossing a dark pink upon a white, sixty per cent. of the ancestry on both sides was dark pink, the chances to secure a dark pink to the hybrid would be largely in proportion to the percentage of dark pink existing in the ancestry on both sides. On the other hand, supposing that we crossed a white with a white which had a large percentage of dark pink in the ancestry, and, as a result of said cross, we produced a large percentage of whites. This might tend to show that the condition of the chromosomes in the cells exercised the paramount influence in determining the characteristics produced in the hybrid. Now, it might be possible to take different individuals, the result of the same cross, all of the individuals being white, the crossing two individuals might produce a large percentage of whites, while crossing two other individuals, all being white, might produce a large percentage of pink. This would again tend to prove the theory that the condition of the chromosomes in the cells of the individuals might exercise paramount influence.

There is another peculiar thing that seems to be the case in regard to crosses between the same individuals, and that is that crosses between such individuals made at different periods of the year when the plants were growing under somewhat changed conditions produce different results. This might lead us to the theory that the condition of the individuals at the time that impregnation takes place may exercise paramount influence over the characteristics of the progeny. This theory might seem to be proven by the results obtained in the production of mankind where a dozen children the result of the union of two individuals and born at somewhat widely different periods present widely different char-

acteristics, both mental and physical as well as in appearance.

My impression is that it will take several years' study in order to determine the question. Possibly it may be necessary in continuing my experiments to segregate the female blooms in apartments by themselves so as to prevent the chance of a foreign grain of pollen alighting on the pistil, as this might explain some of the apparent idiosyncracies in the results obtained in my youth.

A Summary of Results.

The summary of the results of crossing different colors may prove very interesting. For instance, where crimson was crossed with crimson the results produced twelve crimson and five scarlets; where dark pink was crossed with dark pink, thirty-seven dark pinks were produced; where white was crossed with white, thirty-four whites were produced, and only one white variegated with pink, there being no solid colors. Where white was crossed with crimson, five whites were produced and two scarlets, the balance being divided between dark pink, flesh pink and crimson, but where white was crossed with dark pink, the result was three pure whites.

There is another element in making up these studies which may interfere with their value in deciding the question of paramount influence and that is that only varieties that possessed a number of characteristics were preserved and records kept of them. There is a great mass of stuff that was thrown away, and in making these crosses we were constantly selecting plants possessing all the characteristics desired. I am inclined to think that the fact that we threw away a lot of useless stuff will not change the result. For instance, taking the result of crossing white with white, there were saved for observation from these crosses thirty-four whites and one white variegated with pink, as all the white parents of both sides were selected not only for their good color, but also for size and form of flower, integrity of calyx, healthy constitution, stiffness of stem, vigor of growth, and also for freedom of bloom. The fact that thirty-four whites were selected for trial as against only one white variegated with pink and that the results of these white crosses did not produce anything in solid colors that were worthy of selection for trial would seem to indicate that whatever laws exist in regard to the influence of the parents upon the progeny would finally prove to be applicable not only to color but to all other characteristics.

Some Interesting Conclusions.

Now, when we come to the consideration of pure crosses which we might specify as crosses between males and females of the same color, we find the following remarkable results: a cross of white upon white produced thirty-four whites against one other color; a cross of light pink upon dark pink produced six light pinks as against four of other colors; a large number of crosses of dark pink upon dark pink produced thirty-seven dark pinks as against twenty-four of other colors; a cross of scarlet upon scarlet produced ten scarlets. All of which would tend

FORMOSA

LILIUM LONGIFLORUM

Ask your dealer for our own special grown stock or write us direct for quotations. Only a limited quantity available for the coming season 1908. Delivery will be made the first part of August. The bulbs are thoroughly ripened one month before the Bermuda Harrisii and are considered far superior in quality as they are *entirely free from disease*.

Careful trials were made for two years and were so successful that we imported over 300 cases last season. Our cases will be marked Y. N. Co.

YOKOHAMA NURSERY CO., Ltd., 31 Barclay Street, NEW YORK

to indicate that by using two individuals possessing the same characteristics, the chances to reproduce a large proportion of these same characteristics are very much enhanced. This might be shown very nicely in the cross of crimson upon scarlet, which produced twelve crimsons and five scarlets as against three of other colors. In this case it is probable that there was considerable crimson blood in the ancestry of the female parent.

The cross of crimson on crimson need not be taken very seriously, as it is the result of but a very small number of seeds, and I am inclined to think that there was considerable scarlet blood in either one or both of the crimson parents.

Of course when we make mosaic crosses, such as white upon scarlet, pink, crimson and other colors, we must expect a breaking up of colors in the progeny, and where we cross two of the same color we must expect more or less breaking up of colors in the progeny, especially where the immediate ancestry contains parents of widely varying colors.

Referring to examples of individual crosses, suppose we take cross 2313-07, a scarlet upon white. It will be noted that in these notes the pollen parent is mentioned first, as some other hybridizers mention the female parent first. Now, the color parentage running back for some ten or twelve years shows that on the male side there were six dark pink, six yellow variegated, five crimsons, three whites, two scarlets, one light pink and one white variegated. This pedigree is

made up without reference to the nearness of any of the individuals of any particular color being particularly near to the seed and pollen parents, but it simply indicates that among the male parentage of both sides six dark pinks occur, etc., while on the female side five dark pinks, three crimsons, one scarlet, four whites, five white variegated and two whiteflaked occur.

Assuming that dark pink and crimson, purple and scarlet would tend to produce dark pink or scarlet—we would naturally anticipate a large number of dark pinks or scarlets—whereas we get only one dark pink, one scarlet and one white, thus indicating that other influences than the percentage of the same characteristics in either or both of the ancestors may determine the characteristics in the hybrid.

The results of these experiments and the study thereof has led to the conclusion that neither parent exerts predominant influence in determining the characteristics of the progeny—but that said characteristics may be determined from either side of the parentage or may result from modified characteristics of both parents as well as both ancestry.

MOVEMENTS OF GARDENERS.

John Erickson has been appointed gardener for Mrs. C. C. Converse and Mrs. Lester Leland, Malden, Mass.

James Sage has succeeded Alexander Adam as superintendent for Alfred G. Vanderbilt at Oakland Farm, Newport, R. I.

Harry C. Hogan is now in charge of the gardening department of Sandy Point Farm, Newport, R. I., the residence of Reginald Vanderbilt.

David F. Roy, Malden, Mass., assumes his new position in charge of "The Moorings," Col. H. E. Converse's estate, at Marion, Mass., on March 1.

George Cray has been appointed superintendent at Pine Banks Park, Malden, Mass. His previous duties as foreman well qualify him for the position.

Harold Edgar has taken a position with E. D. Kaulback & Son, Malden, Mass., and David Stark, who had charge of the fruit department at the Converse estate, has gone to the Hooper estate, Manchester, Mass.

Seed Trade

It was supposed that the place for the next Cannery Convention had been decided upon at Cincinnati, but information which comes to hand during the past week indicates that this matter is still unsettled, and that some other place may be chosen. Interviews with prominent canners show that they are of the opinion that Chicago is to be the place, but it seems that the Machinery & Supply Men's Association have something to say in the matter, and according to reports, the Chicago proposition is not wholly acceptable to them. Just when this matter will be definitely settled cannot be stated now, but something will have to be done in the near future.

Ignorance of seeds and plants even by many of our most intelligent men is proverbial. A case in point is from an item in Harper's Magazine, by Wm. Dean Howells. It is best to quote his own words, which are as follows:—

"We know of a case, no longer ago than last summer, in which the gardener bought a seedman's last dozen of eggplants, which he duly set out in his plot, and which flourished with uncommon promise up to the blossoming moment, all looking alike and unmistakably eggplants. But at this point they differentiated themselves; five continued eggplants, and seven turned aside and became petunias. They came, indeed, very beautiful petunias, delicious in fragrance, rare in form, and most delicate and novel in color; but, after all, they were not eggplants. The seedman of whom they were all bought, being oppositely reproached, justly remarked that the gardener who supplied them must have got them mixed. Sometimes, this sort of mixture begins further back, with the very seeds themselves." Comment in such a case as this seems to be quite unnecessary.

There is very little activity just at the present time in seed corn or seed peas, most of the large buyers generally having secured their stocks for the coming season's planting. There is, however, quite a probability that the slender reserves of seed corn will be heavily drawn upon for replanting purposes. Much of the seed that will be planted this year will be of such poor germination that unless the weather, the soil and all conditions are most favorable, replanting on an extensive scale will be necessary and, before the 1st of July, it is probable that seed corn of good vitality will be again at a premium.

C. W. Witbeck has opened a seed store at Schenectady, N. Y. Whether he is to succeed his brother, Clark Witbeck, or whether the latter will still continue is not positively known, but the information to hand indicates that Mr. Clark Witbeck has retired from the seed business, to devote his time to hardware affairs. Mr. C. W. Witbeck has had many years' experience, and he will, no doubt, have the best wishes of his many friends in his new venture.

The troubles between two of the

very prominent seed firms of the country, which threatened serious results in the early part of the season, it is learned, have been amicably adjusted. The gentlemen interested deserve the thanks of the trade for reaching the agreement they have, and it is to be hoped that any future misunderstandings between members of the seed trade will be as peacefully adjusted.

Most of the growers of peas and beans are said to be now booked to their limit of safety on most varieties of peas, at least, particularly of the canning varieties, and now, if Mother Nature will give us a favorable season for the raising of our crops, the canners will be made happy by full or nearly full deliveries of their orders.

President Green and Secretary Kendel of the American Seed Trade Association met on Saturday in Detroit and made final arrangements with the Hotel Pontchartrain for headquarters for the twenty-sixth annual convention of the Association next June. The use of a suite of rooms on the parlor floor was secured for the meetings and accommodations for all were assured at reasonable rates.

A. T. Boddington has taken the entire floor over his present quarters in West 14th street, New York. The offices will be located on the new floor and much-needed expansion secured. The new cosmos Lady Lenox, which Mr. Boddington is introducing this season, is enjoying a large sale.

GREENHOUSE-GROWN VEGETABLES.

The taste for greenhouse vegetables is due not alone to the fact that many kinds may be had out of season, but

more particularly, we think, to their more delicate flavor and greater tenderness than the out-of-door products. We know of persons who having partaken freely of greenhouse cauliflower and string beans during the winter and spring months, have actually acquired a distaste for these from the summer garden, and do not eat them.

Not a few private estates in various parts of the country now have elaborate vegetable forcing houses—the Spaulding Estate at Prides, Mass., is perhaps the most extensive in New England. Here the gardener, Mr. F. E. Cole, turns out from November until July a continuous supply of nearly all vegetables seen in the summer garden. Cauliflower grown in pots or on benches is supplied from November to June, as are also beets, beans, tomatoes, cucumbers, spinach and a large variety of salad plants. Among other greenhouse vegetables forced by Mr. Cole are asparagus, corn, melons, squash, rhubarb, sea-kale, etc. Mr. Cole is an expert on mushroom culture, a section of one of his benches being reproduced in the accompanying illustration. The crop here grown is from the pure culture spawn, which gives a large solid mushroom particularly suitable for broiling, but perhaps somewhat coarser in texture and less highly flavored than the smaller "buttons" produced from the imported mill-track spawn.

Successors to Nathan Smith & Son

ADRIAN, - - - MICH.

New Violet BOSTON

In introducing this new variety to the trade I wish to state that I have been growing it in quantity for the past two years and do not hesitate to state that it is entirely distinct, a strong grower, a free bloomer, and the finest single violet in cultivation. Ready for distribution in April and May. Orders booked now. \$2 per 12; \$12 per 100; \$100 per 1000. 500 at 1000 rate.

WILLIAM SIM, CLIFTONDALE, MASS.

DREER SPECIALS

Golden Yellow Calla Elliottiana We have a fine lot of bulbs of this beautiful variety which if started into growth now can still be flowered for Easter. This Golden Calla is still but little known and always attracts attention. \$2.00 per doz., \$15.00 per 100.

Fancy Leaved Caladiums We are this season offering the finest set of Standard Fancy Leaved Caladiums that has yet been sent out at popular prices, 25 distinct sorts. \$1.50 per doz., \$10.00 per 100; the set of 25 varieties for \$3.00.

New Fancy Leaved Caladiums A set of twelve wonderfully marked beautiful varieties. The set of 12 sorts for \$2.50, or \$20 per 100.

Canna King Humbert The best of the dark leaved, very large flowered brilliant scarlets and a perfect gem that pleases everyone. We are long on this and offer at the special price of \$1.25 per doz., \$8 per 100.

Canna Grand Chancellor Bulow A remarkably rich crimson scarlet that never sunburns, with flowers of good size and very free, was much admired in our trial grounds during the past two seasons. \$1.50 per doz., \$10 per 100.

Canna Frau Marie Nagel An introduction of Wilhelm Pfizers, the Canna specialist of Germany who has given us many important varieties. It is the most floriferous of the large creamy white sorts and contrasts fine with high-colored sorts. \$1.25 per doz., \$8 per 100.

New Decorative Dahlia Souvenir de Gustave Doazon The most sensational Dahlia of the season, of mammoth size, producing under ordinary cultivation flowers 6 inches in diameter and can be grown to measure full nine inches, it is of free growth and remarkably free flowering. Certain to become one of the most popular sorts for cutting and decorating, its pure scarlet color, immense size and unique form guarantee its future.

Rex Begonias We have at the present time the finest lot of Rex Begonias that we have been able to offer for many years, twenty distinct varieties, fine plants in 3 inch pots, \$1.25 per doz., \$8 per 100; the set of twenty sorts, one of each, for \$2.

HENRY A. DREER, 714 Chestnut St., PHILADELPHIA, PA.

BEGONIA GLOIRE DE LORRAINE

Stock plants to propagate from, or for growing on, 2½ inch and 3 inch pots, \$15.00 per 100; \$140.00 per 1000.

These are now ready for delivery.

Adiantum Farleyense

strong stock plants from 6 inch pots, good for propagating only, will average 50 eyes each.

\$6.00 per dozen.

J. A. PETERSON

McHenry Ave., Westwood, Cincinnati, Ohio.

OBITUARY.

James Daly.

James Daly, who has been a familiar figure to the frequenters of the New York flower markets for many years, died on February 14, at the age of 43. He had been in the employ of Jas. Weir's Sons, Brooklyn, for a quarter of a century.

William McManus.

William McManus, father of James McManus, wholesale florist of New York, died on February 14 after a brief illness, aged 68. Mr. McManus was born in Ireland, and came to this country many years ago. A widow and two sons survive him.

Robert Allan.

Robert Allan became seriously ill last Saturday and was removed to the Newport Hospital where, without regaining consciousness, he passed away on the evening of Monday, 24th inst. He was a brother of William Allan (gardener at Dr. Jacob's estate) whose son died about two weeks ago. Robert Allan was popular with all classes in the community and his friends were many. A few years ago he was gardener on the estate of E. C. Knight on Bellevue Ave., Newport. Besides the brother above-mentioned, he leaves a widow to whom the keenest sympathy is felt. He was thirty-eight years of age. D. M.

NEWS NOTES.

Whitter & Co. have been awarded the contract for bulbs for the park department of Lowell, Mass.

G. A. Kishpaugh of Iola is starting in the greenhouse business at Independence, Kansas, with C. W. Lemmon as manager.

A. L. Randall Co. of Chicago have leased the four floors of the building they now occupy and contemplate making extensive improvements in their supply department.

I. Racz has purchased a place at Marshfield, Mass., and will begin business with the growing of vegetables and small fruits, later to take up ornamental stock and erect a range of greenhouses. He would be glad to receive catalogues and price lists from wholesale dealers.

J. W. Shadlow, proprietor of the Cedar Hill Nursery and Orchard Co., Winchester, Tenn., has made a voluntary assignment to Hugh Morton, trustee. The estimated cash value of the assets is \$60,000, and liabilities \$42,000. The company did an annual business of \$250,000. The business will be continued by the trustee, and it is said the obligations can be met within a year.

FIRE RECORD.

Bennett & Peters, Paola, Kansas, greenhouse damaged to the extent of \$200.

Goodwin Bros. Pottery Co. Elmwood, Conn., had their factory destroyed re-

cently, and lost all machines, molds, etc.

P. J. Sinclair, florist, Toronto, Can., lost \$5,000 in a fire of unknown origin on February 18. He was well insured.

The greenhouse of Victor Maret, Lowell, Mass., was discovered to be on fire on the morning of February 20, but prompt work soon extinguished the flames.

Fire was discovered in the Howe block, Lowell, Mass., on February 18, over the flower store of James McManmon, but fortunately his stock was not injured.

THE FLORISTS' SUPPLY HOUSE OF AMERICA

Without a rival in knowledge of the requirements of the trade and the ability to supply them. Our New Illustrated Catalogue, recognized as a work of art unprecedented in its line for variety, novelty and completeness, tells the story fully, and if you have not yet sent for it, do so now.

'TIS FREE TO EVERYBODY IN THE TRADE

H. BAYERSDORFER & CO., 1129 Arch St., Philadelphia, Pa.

FLOWER MARKET REPORTS

BOSTON Although Friday and Saturday of last week and Monday of this week developed a little activity in buying, yet no permanent improvement in market conditions is visible. At time of publication things are pretty dull and the receipts continue heavy; accumulations are moved with difficulty and, as a rule, at very low figures. Roses hold prices better perhaps than any other staple, but they are increasing in quantity daily. As to quality, it may be truthfully stated that never have the flowers in this market been better. This statement applies to all classes generally. High grade material is in evidence everywhere, even on the curbstone stands.

The past week was a most eventful one for florists. On Thursday we had a blizzard—the worst since 1885—and at some greenhouses considerable damage was done by the weight of snow on the glass. Trains being delayed caused many market shipments to come in late. Retail business was at a standstill, it being impossible for customers to venture out for several days. Carnations glut the market. New York violets are being sold at any price available. Bulbous stock is very plentiful. With roses it is another story. Brides and Bridesmaids are scarce, but of fine quality; Beauties are also very scarce but of poor quality, most of the growers of the rose being off crop, but expecting to be in for Easter. Among the spring flowers noted are white and purple lilac, dentzia, and bridal wreath. Callas and lilies are most abundant. Sweet peas, when they have long stems, bring a good price, but short ones are a glut. It is drawing close to the Mardi Gras Festival at New Orleans and shippers anticipate a good business from that section.

Stock is accumulating to a great extent here, with the exception of roses and violets. A heavy demand on hardy ferns finds first-class supply, but such greens as asparagus and smilax are at a premium.

Business in the wholesale cut flower marts shows but little improvement over that of last week. The holiday on Saturday helped to clean up some of the accumulation and Monday's pulse seemed to throb with a little more vigor than customary, but, on the whole, there is nothing in evidence on which to base a statement that business has improved. Carnations, violets and all bulbous stock except lilies continue in over supply; the latter are scarce. Of roses there are enough, but no great surplus, and the quality is excellent. A small quantity of *Acacia pubescens* is being received. *Prinnia obconica* is a frequent object in the florists' windows, and the scare regarding the poisonous qualities of this pretty plant seems to have in a measure died out.

PHILADELPHIA A more cheerful feeling prevails in the wholesale markets here. Not that I see any great improvement in conditions but I think the dealers are accommodating themselves to the change. Washington day brightened things up a little. The weather has been favorable and lots of stock has been moved off through the usual auxiliary channels. American Beauty roses are off crop for the time being, and prices have hardened up a little. The prospects are for plenty of these again very shortly. Other varieties are moving well but without change in quoted rates. The rose situation is improved considerably, but no change for the better can be reported on carnations. Lily of the valley market is poor. Violets in fairly good demand—especially on mild days when the street men can work. Sweet peas are still too plentiful. Orchids are in good demand. *Cattleya Schroederiae* is the leader at present. *Cypripediums* are more plentiful than usual for the season. Lilies if good find a market. Daisies, myosotis, and such spring subjects are in fair demand. Bulbous stock shows no improvement and supplies remain much in excess of demand.

During the latter part of last week there was an unusual business activity here. A good many large social affairs and prominent funerals have called for an unusual amount of cut flowers. All stores are kept agreeably busy. With the exception of American Beauty roses all stock is plentiful, and prices keep up amazingly well for so late in the season. There is an abundance of bulbous stock but quite a dearth of greens of the better class.

CARNATION LIEUT. PEARY.

Referring to the note in last week's HORTICULTURE concerning the alleged tendency of carnation Lieut. Peary to "go to sleep" on the plants under certain conditions, Mr. C. W. Ward advises that a temperature of from 52 to 55 be given this variety, with plenty of ventilation. He finds it resentful of overwatering, and if soil is kept soaked trouble is liable to ensue. With him Lieut. Peary has always proved to be an excellent keeper and has made a good record in cash returns. From 250 running feet of bench, averaging 4 feet in width, the returns this season from September to February 15th have been \$425, which Mr. Ward considers satisfactory.

GREENHOUSES BUILDING AND CONTEMPLATED.

Hannibal, Mo.—Lee Hodges, one house.

Chicago, Ill.—H. F. Halle, 25-ft. conservatory.

Jacksonville, Fla.—Sawyer & Payne, three houses.

N. Augusta, Me.—Percival Bros., range of houses.

E. Sandwich, Ont.—J. H. Smith, range of houses.

Ludington, Mich.—Wm. Gregory, range of houses.

Rock Island, Ill.—Ludwig Stapp, carnation house, 51x160.

PHILADELPHIA NOTES.

D. D. L. Farson has opened a flower store at Ardmore, under the title of the Main Line Flower Shop.

M. Kavanagh, for many years a prominent member of the Craig forces, has been seriously ill since Christmas.

On Tuesday evening, March 3rd, the Florists' Club will be addressed by Mr. J. Otto Thilow, his subject being "New Things in an Old Country."

Alexander B. Scott has just returned from his usual mid-winter trip, greatly benefited in health and now ready for a strenuous season. Mrs. Jardine is his leading lady this year. Hamakichi Suzuki, of Yokohama, Japan, and Chas. Loechner have been visiting the seed trade in the interests of the Yokohama Nursery Co. this week. C. W. Scott, of Chicago, was also a visitor.

W. Kleinheinz is recovering rapidly from the severe attack of rheumatism from which he has been confined to his room since December 29, and expects to attend the rose show in Chicago in March.

Mrs. Jardine will be among the exhibits at the Boston Market Flower Show on the 29th inst. W. P. Craig will be cicerone. Any New England rose grower wishing to see for himself should embrace this easy opportunity.

FOR SALE Greenhouse property consisting of five houses, two each 300x16, one 150x16, one 200x10, one 200x15, 125 feet connecting sheds. Heated by two 40 horse power, high pressure boilers. Small engine for operating blower, City water. Dwelling-house five rooms and barn. Eight acres of land. Place has been built five or six years. Located five minutes from electric cars, twenty minutes' ride to a city of 40,000 population and about twenty miles from Boston. This affords an exceptionally good chance for anyone desiring to go into the growing of flowers for wholesale, also for a very extensive retail business later on. Possession given any time after July 1st. Place can be bought very reasonable, one-half payment cash, balance on mortgage. For further particulars apply to P. WELCH Care of WELCH BROS., 226 Devonshire St., Boston

WANTS, FOR SALE, ETC. Advertisements in this column one cent a word. Initials count as words. Cash with order. All correspondence addressed "care HORTICULTURE" should be sent to 11 Hamilton Place, Boston.

HELP WANTED WANTED — SALESMAN To Handle Good Side Line On Commission One who calls on Florists, Seed Houses, Nurseries, Cemetery Superintendents, Monument Dealers, etc. The Kramer Bros. Foundry Co. DAYTON, OHIO

SITUATIONS WANTED GOOD MEN When you need good men, skilled or unskilled, write: THOS. H. BAMBRICK 34 South 7th Street Philadelphia Help of all kinds, including that for Florists, Nurserymen, Seedsmen and the Horticultural trade generally.

SITUATION WANTED in general greenhouse work; single, age 35, five years' experience, commercial. Address W. W., care HORTICULTURE.

FOR SALE FOR SALE Greenhouse Plant, consisting of three houses, one 142x32, one 75x18 and one 15x10, with cold frames and sash; boiler and potting house 20x20 and every convenience for commercial business. These houses were built three years ago by Lord & Burnham Co. and are strictly up-to-date in every particular. Two Burnham steam boilers, one of which heats entire plant. In construction every point was considered with view of enlarging. Present steam capacity sufficient for double the size of plant. Fully stocked with finest crop of carnations, etc., and in perfect running order. In centre of population of upward of 200,000 within radius of ten miles. First-class electric car service (two lines) and steam R. R. connecting with B. & A. R. R., Boston, Worcester and surrounding towns. Excellent opportunity for large retail trade. This property includes dwelling of 8 rooms and 2 1/2 acres of land. Owners are engaged in other lines of business and will sell at a low price. Inquire of B., care HORTICULTURE.

HOT-BED MATS STRAW, 6c, little used 75c to \$1.00 G. H. FROST, West Newton, Mass. FOR SALE OR TO LET—15 acres of land, nearly all under cultivation; 20,000 sq. ft. glass, house well stocked with carnations, chrysanthemums, etc.; 8-room dwelling house, steam heated; large barn; in a city of 14,000 population, 10 miles from Boston; excellent transportation facilities. Good retail trade now established. Terms will be made satisfactory. Possession given April 1 or sooner if desired. Address A. G., care HORTICULTURE.

FOR SALE—A large consignment of 16x24 double thick American glass, A and B quality. For further information write Parshelsky Brothers, 59 Montrose Avenue, Brooklyn, N. Y.

Is Your Name In The Above List? . If Not, Why Not?

WANTED. To buy, to lease with the right to buy, or to lease, several Greenhouses with ground where retailing and landscaping is possible. Address L. E., care of HORTICULTURE.

SMALL FRUITS.

A paper read before the Vermont Horticultural Society by Wilfrid Wheeler.

In taking a view of the fruit situation of the country in general, one is apt to underestimate the value of the small fruit crop, giving prominence to the apple and orange crop, putting them down as more important contributions to the fruit industry—statistics, however, show us that the strawberry alone is grown in as large quantities as the apple, and forms throughout a shorter season, as necessary an adjunct to the fruit consuming public as any other fruit produced.

The Situation in New England.

From a commercial standpoint as yet in New England small fruits have not attained as much importance as they deserve. The strawberry is perhaps an exception to this rule, particularly in the vicinity of our large cities, where it is grown chiefly to supply the local market, but even then the amount of this fruit grown is small when compared with the South and the West, where thousands of acres are devoted to strawberries which are grown and shipped to markets from 500 to 3000 miles away. This shows what quick transportation has done for a crop which forty years ago was produced in the home garden.

At present the people of New England grow about one-half the small fruit that is needed for their consumption, leaving the balance to be supplied from other states. This lack of small fruits is particularly noticeable in the rural districts, where many of the farmers are engaged in dairying and do not consider it necessary to provide their families with the fruits which are so delicious to eat and so easily grown. Then, too, in those outlying parts of the country there is a large amount of wild fruit, such as blueberries, raspberries and blackberries, which can be had for the picking and which to a certain extent fill the place of the cultivated fruits, but to my mind these are only poor substitutes for the home grown article which can be gathered at your back door, and which excels in quality and flavor the uncultivated varieties.

Quick Returns.

Few people realize that the strawberry, also the currant and gooseberry, can be successfully grown among young apple and pear orchards, thus insuring a quicker return from the land than by waiting from seven to ten years for the larger fruits to bear. Study your conditions and if

you are growing fruit at all see if you cannot get in some of these small fruits and help out your income as well as furnish you with an occupation a part of the year when the general work of an orchard is more or less slack.

Small fruits come at a season when they are particularly needed and wished for, and should on that account be welcomed and appreciated, and the growing of them should appeal to those who are interested in fruit culture, not only from an economical standpoint, but also from what might be termed the home garden point of view. Here in Vermont where you have a large summer population the question of supplying it with fresh fruit ought not to be a difficult one to solve, when you have the strawberry bed, the blackberry and raspberry patch, and the currant and gooseberry bushes to depend on.

It is often the cases in country towns and especially those near small cities, that the few berries that are raised are sent away and the unlucky householder who has failed to supply his own needs from his garden finds it impossible to buy any fruit near home.

Yet these people from the city are willing to pay well for something they can't get at home, but with which you can supply them right here on your own farms, namely, fine, fresh fruit. Then, too, where many of the farmers drive every day to railroad stations and large towns with their milk, butter and eggs, it would be a source of additional income to add a few boxes of choice berries to the load and either take them to the local market or deliver them to the householders of the town, for your small city is often supplied from fruit sent from Boston, which when it arrives is hardly fit for use and could not in any way compare with the native crop.

Easy of Culture.

When you consider that these small fruits, the strawberry, raspberry, blackberry, currant and gooseberry can be grown to perfection on almost any soil and with almost any exposure, can be made a profitable as well as a pleasant occupation, aside from the other work of the farm, there will really be no excuse for not planting them to the extent of your ability to care for and your market to handle such crops.

We need more home fruit gardens in New England, and especially gardens where the healthy, pleasant and profitable occupation of small fruit-growing for commercial purposes is undertaken. Then we would not see our markets

filled with the products of other states and the money which might be ours going in other directions, not infrequently out of the country altogether.

One other important need in connection with small fruit growing and that is more men, more young, efficient, well qualified men to take up this important branch of horticulture, to take it up in a sensible, thoughtful, scientific way, realizing, of course, that there are drawbacks and disadvantages as there are along any line of work, but determining at the same time to make a success of small fruit growing in New England.

The Outlook for the industry.

The outlook for this industry was never more encouraging than at present. With a developing country, a shifting population, a grand exodus of the people from the city to the country during the summer and above all with a largely increased appetite among all the people for small fruits, there is a demand for greater efforts on the part of the horticulturist of the country. Then again new uses are always being found for these fruits, they are now used in so many forms of preserves, in medicines, and since the pure food acts their juices are actually being found on the soda water fountains.

A very important point which ought to have the consideration of New England fruit growers is the shipping of our surplus small fruit crop to some of the southern cities. Some years the larger northern cities are overcrowded with strawberries, while some of the southern markets are unsupplied and would gladly welcome the fruit which is being sold at home at a loss. You ship a perishable article like milk great distances; why not try the experiment with small fruits?

About the Strawberry.

Of the strawberry, the most important of this group of small fruits, I wish to speak somewhat at length. Its ease of cultivation, its great adaptability to soil and climate, the quick returns it gives, the beauty and quality of its fruit, all combine to make it the most popular fruit in the world. There is probably no climate between the north and south temperate zones that the strawberry will not grow in and we find it under such varying conditions in the hundred acre field and in the city back yard, growing and flourishing and producing its wealth of crimson fruit for the joy and refreshment of mankind. In spite of the ease with which the strawberry grows, there are a few general directions which should not be forgotten when

"SCALECIDE"

HAS MADE SPRAYING EASY THEN WHY NEGLECT YOUR TREES?

The N. Y. Herald, November 17, '07, says: "The chances are about a hundred to one that you have the San Jose Scale on your place and do not know it," and advises the use of "SCALECIDE." This is good advice. "SCALECIDE" has been tested and tried, and found thoroughly effective. The same yesterday, to-day, and all the time. One gallon makes 15 to 20, ready to use, by simply adding water.

Prices: 1 gal., \$1.00; 5 gal., \$3.25; 10 gal., 6.00; 50 gal. bbl., \$25.00, F. O. B. our factory. Order to-day. Write for booklet W and free sample.

is acknowledged the best for the florist, because it is durable and does its work without trouble and annoyance, saving its cost by the economy in coal bills.

**E. HIPPARD
YOUNGSTOWN, OHIO**

successful strawberry culture is the desired end, and first,—the situation for a strawberry bed should be protected from sweeping winds and also from the burning hot sun of a southern hillside. Then the soil must not be too wet or too dry, and the plants when set should be thoroughly cultivated, weeded and protected in winter.

If possible, choose the land for a strawberry bed with a slight slope, enough to drain off surface water, but yet not so steep that the soil will wash during heavy rains. If you have no choice and must use flat land, see that there are no low places where water will stand and cover the plants in winter. If the land chosen is too wet, and by "too wet" I mean that the ground water is nearer than one foot from the surface, it must be drained the same way; a convenient method is with tiles or stone drains. Dry land can be improved by the addition of macadam mud and plenty of manure, but better results will follow from the choice of the moist land, for during the fruiting season moisture is needed to fill out the berries and bring them to perfection. A safe rule to follow is that land that will grow good corn can be relied upon for strawberries.

Why U-Bar Greenhouses Excel

Then there is the downright practical side of U Bar houses, the side that means more flowers, or vegetables of finer quality with less care and expense than in any other houses constructed any other way. The reason for this is, in short — *more light*. You see there is no gutter at the eave — no heavy members — the glass is spaced 24 inches instead of 16 inches. Every structural detail has been reduced to the smallest possible point. Still with all this extreme lightness of construction, there is not a more rigid, enduring house made — and it is the U-Bar that does it. The catalog although filled with U-Bar houses, both exteriors and interiors, also shows plans, sections and all the interesting structural details that you like so well to know — Send for it

CARNATION CUTTINGS

We are in unusually good position to supply exceptionally well-rooted, healthy stock. We have such a large quantity of flowering plants that we propagate only from heel cuttings from flowering shoots. Our cuttings are rooted in light, sunny, airy houses, and we are sure will satisfy the most critical buyer. A prominent carnation grower writes, "You seem to be the only firm in the business that knows how to pack stock and have it reach the buyer in good condition, and I have always found your cuttings cheaper than the same varieties from others at much lower figures." While our prices may not always be the cheapest, we certainly can give, quality considered, as good value as, if not better than, is obtainable anywhere.

WINSOR which we introduced last year has proved to be the finest novelty introduced in years. We think it is the most profitable variety grown today, considering its fine color, splendid keeping qualities, and productiveness. When properly grown, it leaves little to be desired, and almost every one succeeds with it.

WHITE ENCHANTRESS the best all-round white carnation, on account of its large size, long stem, earliness, and productiveness. Our White Enchantress, exhibited at the Carnation Convention at Washington, was the only White Enchantress exhibited that received an award.

Strong rooted cuttings, now ready for delivery, from sand \$6 per 100, \$50 per 1000; from soil, \$7.50 per 100, \$60 per 1000.

We offer also **Beacon** and **Red Chief**, from sand, \$6 per 100, \$50 per 1000; from soil, \$7.50 per 100, \$60 per 1000. Also **Victory**, **Melody** and **White Perfection** from sand, \$4 per 100, \$35 per 1000; from soil, \$6 per 100, \$45 per 1000. **Variegated Lawson**, **White Lawson** and **Red Lawson**, from sand, \$3 per 100, \$25 per 1000; from soil, \$4 per 100, \$35 per 1000. We can supply, also, **Winona** and **Alterglow** at \$12 per 100, \$100 per 1000.

Buyers will find transplanted stock offered from soil well worth the difference in price

FLOWERING APPLES

The various ornamental apples included under the popular term "flowering" apples, surpass in floral beauty the trees and shrubs blooming at their particular season. Yet, notwithstanding their great attractiveness, they are used very little as compared with most ornamental plants. This fact is probably due, to a large extent, to a lack of any widespread knowledge or appreciation of their worth. Some have been displaying their beauty in our gardens for a long time, while others are comparatively recent introductions from Asia. They are large shrubs or small trees, having a form often somewhat irregular, yet in the case of some species rather symmetrical, bearing an abundance of charming flowers within range in color from white through shades of pink to almost blood-red, and frequently bearing fruit which is attractive in the late summer and autumn.

As to their Demands.

They do not require more than the average ornamental shrub or tree and, for the most part, they are not fastidious as regards soil or situation. Some few need garden cultivation, while others succeed in ordinary soil even on somewhat dry banks. However, they all respond earnestly to good deep soil and careful treatment. Moreover, they are perfectly hardy and vigorous. As to pruning, in the early years of the plant's life it is practically identical with that of the fruiting apple, while later it consists essentially in removing dead and interfering branches.

The Uses to Which They May Be Put Are Many.

They have their place in the small city yard and on the larger city estate as well as on the large country place. Some may be appropriate in the garden or on the lawn as specimens, others may be desirable in the back of the shrubbery, while many of them are particularly well adapted to border plantations and screens. Then some, as the Wild Crab Apple (*Pyrus coronaria*), are very attractive when situated on the borders of a natural wood. After all, there is no gainsaying that they are most effective when in masses, especially where there is a background of green, as that offered by a grassy bank or a growth of coniferous trees. Although this larger use seems to be most desirable, the fact should discourage no one from planting them on small areas and in limited numbers, for a single plant in a garden or on a small lawn is capable of affording as much pleasure during its season of bloom as any individual plant possibly can.

The Period of Bloom of These Apples.

It is a trifle over three weeks. Most of them flower profusely year after year. In the vicinity of Boston the earliest, the Siberian Crab (*Pyrus baccata*) and its varieties, begin to unfold their flower buds the latter part of the first week or early in the second week in May; and the last to delight us with its charm, the Wild Crab Apple (*Pyrus coronaria*), passes out of bloom early in June. Almost simultaneously with those of the Siberian Crab ap-

Pyrus Toringo.

pear the delicate pink blooms of the Flowering Crab (*Pyrus floribunda*). When the Siberian Crab is at its height, Parkman's Crab (*Pyrus Halliana*) is beginning to release the restraint on its rosy petals and in less than a week will grant them full freedom. At the same time the Chinese Flowering Apple (*Pyrus spectabilis*) is largely opening its most advanced buds which a week later will be in full expansion. This is the most tenacious of its flowers of any of these apples, and is in good condition for the longest period. When Parkman's Crab is a little past full bloom and the Chinese Flowering Apple is about in its prime the Dwarf Crab (*Pyrus Toringo*) may be making its display. When this is over, one may expect to find the Western Crab Apple (*Pyrus ioensis*) and the Wild Crab Apple (*Pyrus coronaria*) covered with their rosy-red fragrant flowers. How unobtrusive they are as they nestle in the fresh living green of the unfolded leaves! Yet how certain they are to catch your attention, and how tenaciously they hold it! Is not their perfume sweet? It is that of the apple, yet more refined and withal more intense and all-pervading. Providential it is that these are reserved by Nature to terminate her brilliant array of flowering apples.

The Siberian Crab (*Pyrus baccata*).

Now, is it not worth the while to devote ourselves to making their personal acquaintance? As the Siberian Crab is the first to greet us, it is only courteous to cultivate its friendship. Although growing wild from Siberia and Manchuria to the Himalayas, it has been cultivated in Europe for a long time and in China and Japan from time immemorial. The plants offered in this country are in all probability varieties or crosses and not the true species. It is a small spreading tree sometimes becoming as large as the apple and reaching a height of thirty feet. The flowers are usually white and appear in abundance with the

leaves on long green flower stalks. Following the flowers come the little apples, ranging in size from a quarter to three-quarters of an inch in diameter, and yellow or red in color. When in bloom the tree is a beautiful object, and again at fruiting time it is interesting, yet it should not rank high in this list. What will shortly be said in the case of the Flowering Crab as regards hardiness, vigor and ease of establishment, applies to the Siberian Crab, and likewise the uses to which they may be put are identical.

The Flowering Crab (*Pyrus floribunda*).

This is an extremely attractive plant from Japan. It is a shrub or small tree, low and bushy in form, branching from near the ground and ultimately growing to a height of twenty feet. The flowers are rose-colored, an inch across, and completely cover the plant. The slightly loosened buds with their bright red hue are nearly as attractive as the unfolded blooms, and the combination of buds and open flowers is charming. Then follow the small red apples, about the size of a pea, borne on slender stems. These are rather interesting during the late summer and early fall but do not persist until winter. All in all, this is the best of our exotic apples and, in fact, ranks very high among ornamental plants. It is good in a garden, but most effective when used in masses. This is one of the apples very well adapted to forming screens or to use in border plantations. It is hardy, sturdy and easy to establish and grow.

Parkman's Crab (*Pyrus Halliana*)

is a bush or small tree, with loose open crown, somewhat unsymmetrical in habit and as a rule not exceeding a height of fifteen feet. It has pleasing leathery foliage in moderate abundance. The flowers are rose-colored, usually semi-double, pendulous on slender reddish flower-stalks. The fruit is about a quarter of an inch in diameter, brownish-red and ripens in

late fall. Although its beauty depends almost entirely on the bloom, it is particularly handsome and as regards delicate modeling and exquisite coloring it is the most charming of the group. It is not as vigorous a grower as most of these plants and is more exacting in its demands if one is to get the most satisfactory results. It is decidedly a plant for a garden or lawn and should not be placed in poor soil or in trying situations.

The Chinese Flowering Apple (*Pyrus spectabilis*)

is an apple which has been long in cultivation. It is a small shrub-like tree growing under garden cultivation from twenty to twenty-five feet high. The branches are upright in habit of growth, rather symmetrical, and when the plant reaches maturity the form is vase-like. The foliage is of moderate density and the leaves are thick and of a dark green color. However, the foliage has no particular merit and is inferior, as I believe, to that of most of the apples. The flowers of the forms growing in cultivation are semi-double, nearly an inch across when fully expanded, pale rose in color fading to white, and of delightful fragrance. They appear in great profusion each year, and in the vicinity of Boston begin to open about the middle of May. Fruit is rarely borne and is of no consequence for ornamental purposes. It is easy to grow and is one of the desirable trees for a small place, yet it is very little planted at the present time, although it is one of the older introductions formerly much used. As Loudon remarked, "no garden, whether large or small, ought to be without this tree."

The Dwarf Crab or Toringo (*Pyrus Toringo*)

is a spreading shrub or dwarf tree from Japan. The leaves are deeply incised and often three-lobed, a distinguishing feature of the species. The flowers are smaller than those of the other apples, white or bluish in color and borne on slender stems. The fruit is minute, red or yellow. In contrast to the other apples, this species has interesting autumnal coloring, the leaves assuming a deep purple. This is less valuable than many of the plants which we are considering, yet it is certainly worthy of a place where one is grouping them.

Pyrus Scheideckeri.

Turning from these well tried exotic species perhaps it may be well to gain the acquaintance of some of the newer introductions. Of these *Pyrus Scheideckeri* is a plant of German origin, the scientific disposition of which is in doubt. It is a small round tree, upright in habit and very much resembling the Flowering Crab. The flowers are double, red changing to rosy pink, and open a little later than those of the Flowering Crab. Then they are very tenacious, perhaps even more so than the flowers of the Chinese Flowering Apple. It is hardy, vigorous and certainly promises very well.

Pyrus Niedzwetzkyana.

Coming from the Russian Caucasus is a new apple, the *Pyrus Niedzwetzkyana*. When in bloom at the Arnold Arboretum in the spring of 1905 it was perhaps the most striking object there. It is a small tree with an open and

Pyrus Scheideckeri.

somewhat irregular roundish head. The new leaves are deep purple in color, becoming at maturity a deep green. The wood of the newer growths is also purple. The flowers are single, borne profusely and deepest in color of any of this group, being an intense purplish red. It is one of the earliest to bloom, being in its prime a little after the Siberian Crab. It is hardy, apparently vigorous, and seems destined to make an excellent garden or lawn tree.

The Wild Crab Apple (*Pyrus coronaria*).

Of our own native apples the Wild Crab Apple is the best, comparing favorably with the most satisfactory exotic species. It is indigenous to the forest glades of the region south of the Great Lakes and among the Allegheny Mountains. In form it is a low, bushy tree, growing under favorable circumstances to a height of twenty-five or thirty feet, while its branching is characteristically stiff and angular. It is a late bloomer and prolongs the display of apple blossoms, a fact which gives it decided value aside from its other merits. Perhaps it is less showy than most of the members of this group because the leaves have unfolded when the flowers appear. These are white or rose-color, nearly two inches across when fully expanded, and delightfully fragrant. The fruit is about an inch across, waxy, yellowish green, possessing some ornamental value and serving for jellies and preserves. The plant is perfectly hardy, vigorous and easy to grow. It is best used in masses, either in conjunction with others of the flowering apples or with strong growing shrubs or low trees. It could be successfully employed in

screen or border plantations, and would be admirably placed when used on the margin of a natural woodland. All in all it is the most meritorious of the apples as well as one of the most desirable of small trees.

The Western Crab Apple (*Pyrus loensis*)

is a small tree native to the West, very similar to the preceding. The habit of growth is very much like that of the Wild Crab Apple, while the color of the flowers and the period of their expansion are practically the same. Likewise the treatment and use would be identical. Although it is doubtful if the type is sufficiently distinct to warrant planting, this certainly cannot be said of the beautiful double-flowered form known as Bechtel's Crab.

Now to assemble the attributes and emphasize the fitness of our old and newly acquired friends. We have found them to be hardy, sturdy and far from exacting in their requirements. Their adaptation to a wide field of usefulness is evident and their fitness to their particular tasks goes without saying, whether it is to gladden a garden or lawn as specimens, to enliven the background of shrubbery, to add cheer to a screen or boundary planting, or to brighten the borders or open glades of some native woodland. Their beauty is beyond portrayal. The rose with its suffused fragrance and its delicate splendor is no rival when their branches arch beneath the many flowers, all modest in the presence of their own wonderful coloring.

Daniel A. Clarke.

MARKET EXHIBITION AT BOSTON

The Park Street Market Exhibition at Boston on Saturday, February 29, was all that its promoters had promised and a great deal more. In extent and quality of exhibits it far exceeded any of its predecessors. During the entire day the room was thronged and for most of the time the crush was so great that it was with the greatest difficulty that the judges performed their duties. Rarely is a more perplexing job given to a set of judges than was here presented, the entries being so numerous and the excellence being so general, and the work was not completed until well along into the afternoon. It became apparent early in the day that the market room would be entirely inadequate to properly display the flowers or to accommodate the crowd of visitors, and much regret was expressed that the committee had not accepted the invitation extended by the Massachusetts Horticultural Society to occupy Horticultural Hall for the show. Apprehension that change of location might tend to a loss of individuality was the explanation given by the committee for their decision to remain in their own quarters but it is likely that next year the need of larger space will be imperative.

As the list appended will show, the entries from outside of New England territory were not numerous, although all of conspicuous interest, but the home growers were certainly out in force and it was the universal verdict of visitors from afar that New England growers of roses, carnations, violets and sweet peas are well in the lead.

Among the sensational exhibits none came in for more astonished admiration than W. H. Elliott's Richmond and Killarney roses. S. J. Goddard's Priscilla is generally recognized as a carnation with a big future. S. J. Goddard's Victory was beaten by Beacon but no better Victory has ever been seen. On the other hand Helen Goddard beat Lawson. Altogether, S. J. G., with seven first and six seconds, and a silver cup, had nothing to find fault with. Fisher's winning six in the Hews cup competition, were Evangeline, Winsor, White Perfection, Mrs. C. W. Ward, Enchantress and Beacon. The display of violets was the best on record in Boston. C. Cummings, Wm. Spillsbury, E. Bingham, Paul Richwagen, Kidder Bros., W. E. Turner, C. E. Streamburg, Esty Bros., E. A. Richards, H. W. Field, H. F. Woods and Wm. Sim were all in the running. Worthy of special mention also were F. W. Fletcher's myosotis, R. T. McGorum's candytuft, F. C.

White's wallflower, A. C. Zvolanek's new lavender pea, Mrs. Chas. Totty, R. D. Kimball's and Paul Richwagen's snap-dragon and H. M. Robinson & Co.'s gardenias. J. Fuller's handsome double blue lobelia caught all eyes. Mr. Fuller says that this variety enjoys starvation and gives best results as a bedding plant when plunged in the beds, in small pots.

THE AWARDS.

Carnations.

In class A for vases of fifty carnations, disseminated varieties, the winners were as follows:

- Dark Red, 1st., Edw. Winkler, Harry Penn; 2nd., S. J. Goddard, Octoroon.
- Dark Pink, 1st., S. J. Goddard, Helen Goddard, 2nd., Peirce Bros., Lawson.
- Light Pink, 1st., S. J. Goddard, Enchantress; 2nd., Peter Fisher, Winsor.
- Scarlet, 1st., Peter Fisher, Beacon; 2nd., S. J. Goddard, Victory.
- White, 1st., Patten & Co., White Perfection; 2nd., S. J. Goddard, White Perfection.
- Variiegated, 1st., Leonard Cousins, Jr., Variiegated Lawson.

Class B, for vases of twenty-five carnations, disseminated varieties:

- Dark Red, 1st., S. J. Goddard, Harry Penn; 2nd., Littlefield & Wyman, Octoroon.
- Dark Pink, 1st., Littlefield & Wyman, Lawson; 2nd., S. J. Goddard, Helen Goddard.
- Light Pink, 1st., Chas. S. Strout, Enchantress; 2nd., Littlefield & Wyman, Winsor.
- Scarlet, 1st., S. J. Goddard, Victory; 2nd., Littlefield & Wyman, Robert Craig.

- White, 1st., Patten & Co., White Perfection; 2nd., S. J. Goddard, Lady Bountiful.
- Variiegated, 1st., Peirce Bros., Mrs. M. A. Patten, 2nd., Backer & Co., Mrs. M. A. Patten.

Class C, 100 blooms in one vase, not less than six disseminated varieties. Silver cups.

- 1st., S. J. Goddard; 2nd., Peirce Bros.
- Class D, Vase of 100 blooms one variety, new or standard. Silver cup. Peter Fisher, White Perfection.

- Vase of new striped variety, 1st., S. J. Goddard, Priscilla; 2nd., New Hampshire College, Durham, N. H., Seedling.
- Vase of 25 blooms unnamed seedlings, 1st., Patten & Co., Crimson, 5024; 2nd., Patten & Co., Yellow, 213; 3rd., Patten & Co., White, 46205.

Class E, A. H. Hews cup for six varieties in vases of fifty each, 1st., Peter Fisher.

F. R. Pierson Company prizes for twenty-five Winsor, 1st., Peter Fisher; 2nd., Peirce Bros.

Peter Fisher prizes for fifty Beacon, 1st., S. J. Goddard.

Ditto for twenty-five Beacon, 1st., Chas. S. Strout.

Roses.

Twenty-five American Beauty, 1st., Waban Rose Conservatories.

Twenty-five Killarney, 1st., W. H. Elliott.

Twenty-five Richmond, 1st., W. H. Elliott; 2nd., Waban Rose Conservatories.

Twenty-five Bridesmaid, 1st., Montrose Greenhouses; 2nd., W. H. Elliott.

Twenty-five any other color, W. H. Elliott, Safrano.

Park Street Flower Market prize for best new rose to be disseminated in 1908, silver cup, to W. P. Craig for Mrs. Jardine.

W. E. Doyle cup for 25 Killarney, to W. H. Elliott.

Sweet Peas.

One hundred White, 1st., Wm. Sim; 2nd., H. M. Sanderson.

One hundred Pink, 1st., Wm. Sim; 2nd., H. M. Sanderson.

A. C. Zvolanek Trophy for two vases of 200 each, Florence Denzer and Christmas Pink sweet peas, Wm. Sim.

Violets.

One hundred Lady Campbell, 1st., H. F. Calder; 2nd., H. F. Wood.

One hundred any other double, 1st., Paul

Thompson, Imperial; 2nd., H. M. Sanderson, Farquhar.

One hundred Princess, 1st., Esty Bros.; 2nd., Wm. Sim.

One hundred any other single, 1st., Wm. Sim, Boston; 2nd., H. F. Woods, No. 7.

James Wheeler Trophy for best New Violet, 200 blooms, silver cup, Wm. Sim, Boston.

Miscellaneous.

Collection of Bulbs, 1st., Mann Bros.

Fifty Lily of the Valley, 1st., H. M. Robinson & Co.

Twenty-five Mignonette, 1st., Wm. Nicholson.

One hundred Pansies, 1st., W. C. Ward, Lilium speciosum, F. T. White.

Collection of pot plants, 1st., Mann Bros.

A certificate of merit and special prize for excellence of cultivation was awarded to W. H. Elliott, whose roses were of remarkable quality.

Exhibit from Music Hall Market Growers, 1st., Albert Batley & Son; 2nd., Wyman & Littlefield.

A first class certificate was awarded to John Marshall, Newport, R. I., for red seedling carnation and honorable mention to Backer & Co., for seedling carnation.

S. J. Reuter, Westery, R. I.; Thos. Roland, Nahant; Elijah A. Wood, West Newton, and A. H. Fewkes, Newton Highlands, officiated as judges.

ROSES FROM SAND ARE "CUTTINGS," NOT "PLANTS."

United States vs. American Express Company.

U. S. Circuit Court of Appeals, Second Circuit, February 11, 1908. (No. 124 suit 1800.)

Rose Cuttings—Plants.

Rose cuttings that have been put in sand in preparation for shipment, but have never in fact been in soil, are not dutiable as "rose plants" under paragraph 252, tariff act of 1897, but as cuttings of * * * shrubs, plants * * * commonly known as nursery or greenhouse stock," under the same paragraph.

Appeal from the Circuit Court of the United States for the Western District of New York.

(Decision adverse to the Government.)

For decision below see T. D. 28206, in which the circuit court affirmed a decision of the Board of United States General Appraisers, reported as Abstract 9655 (T. D. 26997), which had sustained the importers' protest against the assessment of duty by the collector of customs at the port of Buffalo.

The import in dispute consisted of rose cuttings that had been put in sand in preparation for shipment but had never in fact been in soil. The Government contended that the Board and the circuit court had erred in holding them dutiable under the provision in paragraph 252, tariff act of 1897, for "cuttings of * * * shrubs, plants, * * * commonly known as nursery or greenhouse stock," and that they had been properly classified by the collector under the provision in the same paragraph for "rose plants."

Lyman M. Bass, United States attorney, for the United States.

Before Lacombe, Coxe, and Ward, Circuit Judges.

Per Curiam: Judgment affirmed.

The single violet a winner

"Slowly but surely" the single flowered varieties of the violet are winning the popular preference and the once regal Marie Louise and other double forms are being obliged to give way to the Princess and Boston with their strong-stemmed, pansy-like flowers which, in classic Boston, have already held the

precedence for several years but which until recently have failed of appreciation in most of the other large flower-buying communities. In fragrance these single varieties far outclass their double-flowered cousins and under wise culture their strength, vigor and general health and adaptability will surely win the day for them especially with growers who have found Marie Louise unmanageable. We look to see the single varieties increase in popularity with each passing season and beyond a doubt, this means the solution of the problem of a local violet supply in many places which hitherto have been compelled to get their supply from remote sources.

Robert Craig's paper on the "Private Gardener," which appears in this issue will be read with interest, and also with much profit, by many who know

that anything Mr. Craig has to say is always worth listening to and worth recording. In this valuable address he views the gardener as he is, the gardener as he might be if he is to attain to the full possibilities of his vocation in the future. To reach the standard set by Mr. Craig the aspiring young gardener will find his time and mind well occupied and little opportunity for frivolous pastimes. It means hard work, mentally and physically, and much self-sacrifice at times but the course once adopted and diligently pursued will soon become almost second nature and its exactions will be a delight at each step of advancement. Unpromising, indeed is the outlook for the gardener who will draw no inspiration from Mr. Craig's words. Thoughtful, logical, sympathetic and far-seeing, they should serve as an incentive and encouragement to every gardener who would "look up and not down," with a courageous determination to win for himself a position of honor in the history of his profession.

Where education points the way

It is especially worth remembering that Mr. Craig's counsel is equally applicable to the gardener bent upon a commercial career as to him

whose preference is for a position in a private capacity. It has often been shown that the most intelligent and successful of our commercial florists and nurserymen have usually come from the ranks of the "private" gardeners, a fact which is due to the greater facilities enjoyed by the man in a private position to study and acquire experience and ripe judgment on broad lines and further to the perseverance and patience with which these men have taken advantage of such opportunity. Education is the best prerequisite for success and that this will become more and more indispensable in the immediate future must be apparent to all who will give the subject serious thought. In our last issue we took the liberty to call attention to the desperate odds against the antiquated greenhouse under the present conditions and prospects in commercial flower and plant growing. Let us now in like manner warn the gardener and florist if he, himself, be indifferent to the progress going on all around him, of the still greater handicap he will now have to carry, crippled and unfitted to compete with the well-informed and progressive rival who has taken advantage of the grand opportunities for self-help which are now at his disposal and which Mr. Craig has so earnestly and convincingly called attention to.

AFTER ADJOURNMENT.

Last week we mentioned Shamrocks in this column. Let us add to the list of enterprising dealers in the "rale thing," Leonard Cousins, Jr., whose advertisement appears in this issue. Samples of this stock were shown at the Market Exhibition and they are little beauties.

Carnation Winsor.—Your correspondent, "E. J.," on page 50, raises a question as to the correct spelling of the name of this Carnation; but perhaps he will tell us whether it is named after a man or woman, or after a town or district. In the former case it is quite probable that it is correct to spell it without the letter d; but if it is named after a town, village or district, which itself would in all probability be named after our own royal town of Windsor, then surely we are justified in spelling it thus. This mutilation of the English language by Americans reminds one of the schoolboy who proceeded to show his father how to plough, although the latter had been at ploughing more or less for well nigh half a century.—Anglian, in "The Garden," London.

We clip the above from the columns of our British contemporary. "Anglian" is respectfully informed that carnation Winsor is named for a gentleman who, undoubtedly, knows how to spell his own name, so "this mutilation of the English language by Americans" need cause no further loss of sleep to our distressed friend across the water. This superb carnation, we might add, has a royalty of its own, to which the "mutilation" of its name by the insertion of a "d" could not add a farthing's worth.

LILIES SHY OF BLOOM.

I am having the very deuce of an experience with my Easter lilies this year. They have been handled as usual, but at this date they are not over 18 inches; some not more than a foot high, and each plant is showing one measly bloom. I have been growing *Harrisii* for ten years but never saw anything like this. Can you explain the phenomenon? I wanted to have them show buds about middle of this month, but I wanted more than one to a plant. Answer in next issue, and oblige,
F. M.

Our correspondent fails to state the size of the bulbs in question. If 6 to 8 in. they should ordinarily produce from two to five flowers each; if 7 to 9 in. they should give from three to eight flowers; 18 inches is a fair, normal height at this date. If a little higher temperature is given, with slight ventilation, the height of the stems may be increased. One flower to a bulb is a very poor showing and is inexplicable unless the bulbs are unusually small or are of a degenerate variety.

A BURGLARY AT WEST GROVE, PA.

Burglars visited the West Grove post office on the 3rd inst. Among other things carried off was a bag of registered letters. This bag contained many orders for the Dingee & Conard Co. and the Conard & Jones Co. Those of our readers who have sent orders or money to either of these firms recently should write at once.

PERSONAL.

Visitors in Chicago: C. S. Ford, Philadelphia, Pa.; R. J. Mohr, Racine, Wis.

Visitors in New York: Wm. Jurgens, Newport, R. I., en route for Washington, D. C.; C. C. Cropp, Chicago.

James T. Quinn, florist of Brookline, Mass., is a candidate for the office of selectman of that town.

Thomas Logan, superintendent of the Newbold estate at Jenkintown, Pa., is happily recovering from his recent severe illness.

Mark Aitken, of Springfield, Mass., who has been ill with pneumonia, has so far recovered as to take a trip to Bermuda. He sailed on the 22d ult.

U. G. Scollay, of the firm of J. A. Scollay, Brooklyn, N. Y., has been re-elected treasurer of the American Society of Heating and Ventilating Engineers.

Frederick W. Kelsey, president of the American Nursery Co., New York, was among the guests who occupied the first official train that passed through the Hudson River tunnel on February 25. Mr. Kelsey also was a guest at the banquet at Sherry's that followed in the evening.

A. Hans, for many years superintendent at the Palmer Estate, Stamford, Conn., will on April 1 remove to Locust Valley, Long Island, where he will have charge of the Hodenpyl estate. Mr. Hans is well known to the readers of HORTICULTURE through his interesting contributions to our columns on Ferns and on Conifers, on both of which subjects he is a recognized authority.

Visitors in Boston: Robert Craig, W. P. Craig and J. S. Hay of Philadelphia; Winfried Rolker, Chas. Loehner of New York; H. Suzuki of Yokohama, Japan; S. J. Reuter, Westerly, R. I.; John Marshall, Newport, R. I.; Alex. Wallace, Portland, Me.; Chas. S. Strout, Biddeford, Me.; H. A. Jahn, New Bedford; Jos. Fuller, Leominster, Mass.; Thos. Knight, of Knight & Struck, New York; John Brown, Bar Harbor, Me.; J. C. Hillebrand, Hillegom, Holland; W. W. Matthews, Great Neck, N. Y.; G. A. Drew, Greenwich, Conn.; A. J. Pieters, Hollister, Cal.; James McGregor, Manchester, Mass.; Mr. and Mrs. C. H. Maynard, Detroit, Mich.

ROSE PARTY FROM PHILADELPHIA TO CHICAGO.

Those from the vicinity of Philadelphia intending to go to the rose convention in Chicago on the 25th, should communicate with Adolph Farenwald, Roslyn, Pa. He is endeavoring to get up a party so as to secure the reduced rates.

OBITUARY.

C. N. Nesmith.

C. N. Nesmith, a successful rose grower of Plympton, Mass., died on February 20.

Fred C. Miller.

Fred C. Miller, florist, and for many years a prominent figure in municipal affairs, died at his home in Bracondale, Ontario, on February 24.

John A. Freeman.

John A. Freeman, who for the past fifteen years has carried on a large greenhouse business at 376 N. Lake street, Aurora, Ill., died on February 18, in his fifty-fourth year.

Ewald Suder.

Ewald Suder, son of Mrs. Henrietta Suder, a prominent florist of Toledo, O., took his own life on February 24, while in a fit of despondency due to ill health. He was 37 years of age, unmarried. His mother, a brother and a sister survive him.

Lewis D. Robinson.

Lewis D. Robinson, who of late has been associated with his son in the florist business, died at his home in Springfield, Mass., on February 26. Mr. Robinson was one of the founders of the Amateur Horticultural Society and a vice-president of the Hampden County Horticultural Society, and has filled various offices of trust in the city. A widow, a son and a daughter survive him.

NEWS NOTES.

At the alumni dinner of the Massachusetts Agricultural College at Northampton on February 21, President Butterfield emphasized the need of a new greenhouse, which has been included in their legislative budget this year for the fourth time.

Through the philanthropy of one of its pioneer citizens, Col. J. T. Munson, Denison, Texas, is to have another and one of the largest parks in the South. Col. Munson recently deeded 130 acres of valuable land to the city for park purposes. Denison has been keeping well to the front in the march of progress and civic improvement and this generous gift adds distinction.

The Denison (Texas) Civic Improvement League, an organization which has been doing very effective work for the betterment of Denison during the past two years, conducted a very successful tree-planting campaign, which resulted in the planting of many shade trees and hardy shrubs on Arbor Day. The school children of the city planted over seven hundred trees and shrubs on the school grounds, along the streets and in home-yards, the plants being distributed last year, and it is expected that more than double this quantity will be required this year.

FORMOSA

LILIUM LONGIFLORUM

Ask your dealer for our own special grown stock or write us direct for quotations. Only a limited quantity available for the coming season 1908 Delivery will be made the first part of August. The bulbs are thoroughly ripened one month before the Bermuda Harrisii and are considered far superior in quality as they are *entirely free from disease*.

Careful trials were made for two years and were so successful that we imported over 300 cases last season. Our cases will be marked Y. N. Co.

**Orders for this Season Must Be in Our
Hands by MARCH 15.**

YOKOHAMA NURSERY CO., Ltd., 31 Barclay Street, NEW YORK

NEWS OF THE CLUBS AND SOCIETIES.

CONNECTICUT HORTICULTURAL SOCIETY.

The meeting of this society was held in County Building, Hartford, on February 28, President Huss in the chair. It was cyclamen night and the attendance was unusually large, about thirty-five members being present. Pres. Huss named Messrs. Sierman, Vidbourne and Gerard as judges, and the awards were as follows:

Certificates of merit to C. Peterson for two specimen cyclamen plants; J. F. Huss for six varieties cyclamen and *Cineraria stellata*; A. J. Weber, for *Cineraria stellata*; diploma to P. Zuger, six specimen plants of *Primula obconica*. W. N. Shumway of Berlin exhibited for the first time a seedling carnation of the Enchantress type, color deep pink. He has grown this carnation for five years, and says it is practically a non-splitter; a strong grower, and equally as prolific as its parent. A special judging committee awarded this promising variety a certificate of merit. F. Roulier read an excellent paper on cyclamen culture. Mr. Roulier is one of our most successful cyclamen growers, and the skilful way in which he treated his subject was heartily applauded. The paper was followed by a lively discussion on the advisability of saving old bulbs. The general opinion was that while an occasional specimen plant could be produced from a bulb, the most profitable way would be to grow them annually

from seed. G. W. Smith was appointed delegate to attend the convention of the Massachusetts Fruit Growers' Association, March 11 and 12, at Worcester, Mass.

ALEX CUMMING, JR., Sec.

NEWPORT HORTICULTURAL SOCIETY.

A largely attended meeting of this society was held Tuesday evening last. James Robertson occupied the chair in the unavoidable absence of President Allan. Robert Cameron read a paper on "Annuals and Biennials," which proved very interesting and full of facts well worth knowing, told in such a way that even to those who may have been aware of many of them, there was a freshness that pleased and instructed. The paper was carefully prepared, evidently with the view of disarming criticism; it was well received and favorably commented upon and Mr. Cameron was awarded the thanks of the society at its conclusion.

There were on exhibition a number of seedling carnations from John Marshall. James J. Sullivan, Stewart Ritchie and Bruce Butterson, as judges, recommended that the society's silver medal be awarded to Mr. Marshall for a red seedling named Newport, and a certificate of merit for a white, and the recommendations were adopted. Newport is good in color, substance of flower and length and strength of stem. Mr. John Peaton accompanied Mr. Cameron.

ILLINOIS STATE HORTICULTURAL SOCIETY.

We have received a copy of the transactions of the Illinois State Horticultural Society for 1907 which shows, in its contents, that this organization is doing spirited work and endeavoring to fulfil its mission for the practical advancement of horticulture in its jurisdiction.

Besides the papers and discussions at the 1907 annual meeting of the State Horticultural Society the book contains the proceedings of the meetings of the Northern, Central and Southern Illinois Societies for 1907, and much other information of practical value. The papers on "Problems in Co-operative Marketing," by J. B. Graves, of Missouri, and "Forestry for Illinois," by Prof. T. J. Burrill, of the University of Illinois, are of especial interest just now. The book contains a fine portrait of the late Edgar Sanders.

Any person paying one dollar may become an annual member of the Society and receive a copy of this book postpaid. Upon application copies of the book will be furnished school and other libraries of the State, and to local Horticultural Societies. Applicants are expected to pay express charges or send stamps to cover postage.

All communications should be addressed to W. B. Lloyd, Secretary, Kimmndy, Ill.

NEW YORK FLORISTS' CLUB.

The annual banquet of this club took place on Saturday evening, Feb. 29, at the St. Denis Hotel, with the usual attendance. The tables were beautifully decorated with choice flowers, donated by the club members, and the affair was very much enjoyed by those present, although, perhaps, in a more subdued and sedate vein than on some former occasions. It was the 21st anniversary, and many letters of regret at inability to be present were received.

When the time for talking had arrived, President Weathered addressed the banqueters, bidding them welcome and dilating upon the club's proud record of usefulness. Ex-President Chas. H. Totty followed, speaking for the toast, "Our Night." He expatiated enthusiastically and hopefully on the outlook for the next twenty years in the history of the club when, he believed, the membership would be no less than one thousand.

The Society of American Florists and Ornamental Horticulturists was responded for by President F. H. Traendly, who urged the importance of loyalty to the national organization and participation in the great exhibition to be held by the society next fall in Chicago. President Weathered spoke of the wonderful engineering accomplishments in the completion of the "tubes" connecting New York and New Jersey and Long Island, which he believed would result in bringing in many new club members from a radius of 75 miles and tend to bring about the long-cherished ambition for a club "Home."

"The Horticultural Press" was assigned to J. Austin Shaw, who did credit to his topic in his usual eloquent and graceful manner. He urged the need for a "press" devoted to the welfare of all departments untrammelled by individual prejudices or business interests, and quoted from some verses read by him five years ago.

Then came the presentation of a beautiful diamond scarf pin to Ex-President Totty on behalf of the club members, R. M. Schultz officiating and making one of the best of his many merry speeches. Mr. Totty's response was eloquent also and expressive of his heartfelt appreciation of the gift.

E. V. Hallock responded in interesting and happy vein for "Our Sister Societies," and gave the horticulturist due credit for being a companionable, good fellow wherever and whenever he is found. Best of all the sister societies, he said, was the S. A. F.

A "silent toast" was drunk standing, to the memory of those who had passed away during the year. A unanimous vote of thanks was passed to the dinner committee, and at midnight adjournment came. During the evening, songs, stories and recitations were interspersed between the speeches by excellent vaudeville performers.

TARRYTOWN HORTICULTURAL SOCIETY.

The regular monthly meeting of the T. H. S. was held on Friday evening, February 28. The Executive Committee reported the following dates for

the annual exhibitions: Summer Show, June 11; Fall Show, November 4, 5, 6. An invitation was read from the Monmouth County Horticultural Society to attend their fourth annual dinner at Red Bank, N. J., on March 3. Wm. Scott offered a prize for 12 cut roses, but roses must be off crop around here; the only roses on the table were from Robert Scott & Sons, Sharon Hill, Pa., who sent their new rose, "Mrs. Jardine" which, after a severe and critical discussion, was awarded a certificate of merit. Rose growing under glass was the subject for the evening; the discussion was opened by Mr. Joe Mooney and followed by many members. Next meeting will be "Cyclamens."

L. A. MARTIN, Cor. Sec'y

MASSACHUSETTS HORTICULTURAL SOCIETY.

On Saturday, February 29, Robert Craig, of Philadelphia, read a paper at Horticultural Hall, Boston, before an appreciative audience on the subject of "The Private Gardener." The paper will be found on another page of this issue. At its close, Mr. Craig was asked a few questions, among them being one in regard to the culture of gardenias. These flowers, he said, were of the easiest culture in the summer, flowering freely and profusely under ordinary treatment but the production of flowers in winter is a much more difficult problem. A temperature of 65 degrees, carefully maintained, with the avoidance of any sudden check, are among the requisites. For summer flowering the young plants should be kept over from fall until

And the Sale Was Still There

TUESDAY, MARCH 17, at NOON, we will inaugurate the Season of 1908, (St. Patrick's Day) by holding our

FIRST SALE

of ROSES, CONIFERS, BULBS, ROOTS, Etc., at

W. ELLIOTT & SONS, 201 Fulton St., NEW YORK

about May 1, in 4-inch pots in dormant condition.

W. N. Craig, of North Easton, added a few words. He said that the successful gardener of the future must know many things thoroughly besides horticulture. He must understand plumbing, gas and steam fitting, must be qualified to purchase coal, machinery and agricultural supplies and have a good knowledge of botany, chemistry, etc. He should acquire familiarity with old-fashioned hardy plants and shrubs and, if filling his position satisfactorily, the question of salary will take care of itself. His course should be to think more about the character of his work than the amount of his pay. On the exhibition table were some interesting plants from R. & J. Farquhar & Co., including the new rambler rose Tausendschon whose wide expanded soft pink blossoms and rich fragrance were favorably commented upon, and two handsome hippeastrum seedlings grown in Porto Rico by James Farquhar. One of these, named Triumph, bore a remarkably well-formed and massive flower of great brilliancy.

HUNTINGTON (N. Y.) HORTICULTURAL AND AGRICULTURAL SOCIETY.

The fourth annual carnation exhibition of the Huntington H. & A. S. was held on February 25. There were numerous entries in the different carnation classes and the quality was quite up to former standards. The display of flowering and ornamental plants, and bulbous and other spring flowers, made a very fine show on the second floor. Not the least encouraging feature was an increased interest by the public as was shown by the attendance. The judges were Samuel Riddell of Farmingdale and Henry Weston of Hempstead, L. I.

Awards were as follows:—25 Lawson; H. T. & A. H. Funnell, Huntington, 1st; Chas. Weber, Lynbrook, 2d. 25 Enchantress; Kramer Bros., Farmingdale, 1st; White Bros., Gasport, 2d. 25 White; Chas. Weber, 1st with White Perfection; H. T. & A. H. Funnell, 2d, with same. 25 Scarlet; Henry Weston, Hempstead, 1st with Victory; White Bros. 2d, with Beacon. 25 Any Other Color; Chas. Weber, 1st with Imperial; H. T. & A. H. Funnell, 2d with Winsor. 25 Assorted; August Heckscher, Adolph Alius, gardener, 1st; Walter Jennings, Richard Cartwright, gar-

dener, 2d. 12 Roses; A. Heckscher, 1st. 100 Violets, double; W. Jennings, 1st; H. T. & A. H. Funnell, 2d. 100 Violets, single; W. Jennings, 1st; W. J. Matheson, Jas. Kirby, gardener, 2d. 25 Freesias; Riddell & Herrick, Farmingdale, 1st; H. T. & A. H. Funnell, 2d. 25 Sweet Peas; H. E. Hyde, Centreport, 1st; Kramer Bros., 2d. 12 Mignonette; A. Heckscher, 1st. Blooming Plant; A. Heckscher, 1st; W. Jennings, 2d. Foliage Plant; A. Heckscher, 1st; H. T. & A. H. Funnell, 2d. Spring Bulbous or Other Flowers; W. Jennings, 1st; A. Heckscher, 2d. Greenhouse Vegetables; A. Heckscher, 1st; W. Jennings, 2d.

A. H. FUNNELL, Sec'y.

FLORISTS' CLUB OF PHILADELPHIA.

Manda's pink seedling carnation "No. 20," and Dreer's "Blush Queen Alexandra" Marguerite, were the only exhibits at the monthly meeting of this club held on the 3rd inst. J. Otto Thilow gave an entertaining account of a recent trip to Europe, which was so good that we hope to publish same in full at an early date. A characteristic letter from A. McConnell of New York was introduced in the middle of the speaker's talk and created much merriment. A dinner will occur on the 11th inst. under the auspices of the club. This takes the place of the usual "smoker" given about this season of the year. Robert Craig gave an interesting account of his visit to Boston last week. What impressed him most was the extraordinary Killarney's the Boston people produce and the unique way in which William Sim grows sweet peas and violets. Thomas Roland's success with the Canterbury Bell as an Easter pot plant was also favorably commented on.

TWIN CITIES FLORISTS' AND GARDENERS' CLUB.

The Twin Cities Florists' and Gardeners' Club held its first field meeting on February 26. About 40 members responded to an invitation from the L. L. May Co. in St. Paul to inspect their new seed and greenhouses. A committee appointed at the last meeting to meet the executive committee of the Minnesota State Fair reported that there will be more prizes for horticultural exhibits this year and more space for display. The time is not far off when the horticulturists of the State will be given a large building for their

displays at the Fair Grounds. The Minnesota State Fair is known all over the country as one of the largest and best.

Will Brothers, Minneapolis, exhibited at the last club meeting quite a few Winsor carnations. They have had good success with it and intend to grow Winsor on a large scale next season.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

A meeting of the executive board of the S. A. F. & O. H. is called by order of President Traendly, to be held at the Prospect House, Niagara Falls, New York, at 9 o'clock A. M. on March 23d next. The same is to continue on March 24th in case the business affairs of the Association are not concluded previously.

W. N. RUDD, Sec.

NATIONAL FLOWER SHOW.

Mr. W. Wells of Merstham, England, offers for the exhibition at Chicago in November next, a gold, a silver and a bronze medal for six blooms of chrysanthemum W. M. Moir, to be shown on stems 30 inches long.

Notice of this offer having arrived too late to be included in the first edition of the premium list, it is hereby given.

W. N. RUDD, Chairman.

CLUB AND SOCIETY NOTES.

The Alabama Horticultural Society at their recent annual meeting re-elected W. F. Heikes of Huntsville, Ala., as president.

The Worcester County Horticultural Society, Worcester, Mass., will hold its annual reunion and banquet at its hall on March 11 at 6:30 p. m.

The spring show of the St. Louis Horticultural Society will be held March 10-12 in the banquet hall of the Grand Avenue Masonic Temple.

John T. Withers of Jersey City is to deliver a series of lectures in Minneapolis, Minn., beginning March 11, on the care and maintenance of trees.

The Columbus (O.) Florists' Club organized a bowling club recently with Jacob Reichert, captain; Wm. Metzmaier, secretary, and Jas. McKellar, treasurer.

Prof. H. S. Jackson, Newark, Del.,

**Wholesale
Only**

Recent Genuine Novelties in

SWEET PEAS

The following are our recent introductions in the **Giant Flowered Wavy Standard Varieties**. These have all been sent out **well fixed in character**, and can easily be kept so:—

- GLADYS UNWIN**—Lovely pale pink. A great market favorite.
- NORA UNWIN**—The purest and finest giant flowered white.
- PHYLLIS UNWIN**—A deep rosy carmine self, and sunproof.
- A. J. COOK**—Best described as a **giant flowered Mrs. Walter Wright**.
- FRANK DOLBY**—Lovely pale blue, a **giant flowered Lady Grisel Hamilton**.
- MRS. ALFRED WATKINS**—A lovely delicate pale pink with pale salmon shading.
- E. J. CASTLE**—Rich carmine with salmon shading. The finest of all for artificial light.

These are all the **Giant Flowered Offsprings** of "Gladys Unwin."

ALSO **EVELYN BYATT**—Rich flame color. The first of this rich color.

To be had from all Seedsmen and Nurserymen throughout the United Kingdom, America and the Colonies.

WHOLESALE ONLY FROM

WATKINS & SIMPSON,

Wholesale Seed Merchants
and Growers,

12, Tavistock St., Covent Garden, LONDON, W. C., England

will deliver the lecture before the Massachusetts Horticultural Society on March 14: subject, Development of disease resistant varieties of plants. March 21 is the date of the spring flower show.

The Massachusetts Fruit Growers' Association will hold their fourteenth annual meeting at Worcester March 11-12. Prof. H. T. Fernald will speak on insect pests; Jno. Eames and Monroe Morse will discuss fungous pests of the past season; J. H. Hale will compare peach growing in New England with other sections; J. H. Putnam will show the possibilities of fruit growing on the hills of the State; Wilfrid Wheeler will speak on small fruits as a money crop, and Prof. F. C. Sears will tell how commercial orcharding can be developed in Massachusetts. Exhibits of fruit will be made.

The committee in charge announces that the annual outing of the New York Florists' Club will take place on Wednesday, July 1, at Witzel's Grove, per steamer Isabell. All arrangements are completed and Stone's Orchestra are already polishing up their instruments and practicing tunes—Scotch and some German. "Sister Societies" are to be invited to participate. Pretty good work, this. The committee capable of such "previousness" should have their names in type, so here they are: W. E. Marshall, chairman; J. Austin Shaw, secretary; Chas. Schenck, treasurer; Robert Schultz and Jos. A. Manda, sergeants-at-arms; Messrs. Bunyard, Rickards, Fenrich, Hoffmeier, Kessler, Guttman, Wheeler, Berry, Totty, Donaldson.

SUCCESS REWARDED BY SUCCESS—THE UNPRECEDENTED

sale of **High Class Aster** seed more fully demonstrates the fact that cut flower growers of the **better classes**, as well as the **retail florists** from all parts of the **United States** and **Canada**, also **Europe**, are open to **conviction** that the trade demands a **higher** and **better grade** and **quality** of **Astera** than has heretofore been produced, consequently our **improved chrysanthemum type of Aster Lady Roosevelt** seed is in **wonderful demand**, and not only the seed, but also the **cut flower product** from this **unsurpassed improved variety of Aster** as same are being **contracted for** already for next **September delivery** by **retail florists** from several **large cities** of various parts of the **United States**, viz: **New York, Pittsburg, New Orleans, Denver, &c.**, a **\$1.00 per dozen, net**. As we are able to produce this **superior Aster Lady Roosevelt** by our **special improved Scientific Intense Culture Methods** with bloom stems **36 in.** or more in length enables us to ship the cut flower product to any city in the **United States east of Denver** without deterioration, as with the **large, long, stiff, wiry stems** they also **absorb** a large quantity of water before shipping, which **preserves them in transit**, and also **two or three weeks** after their arrival at their destination.

Marvelous as it may seem, we are expecting this season to **improve upon our last seasons accomplishments** by growing our **Aster plants 6 feet tall**, whereas last season they were only **4½ and 5 feet** in height, thereby producing bloom stems **36 to 48 inches** in length with flowers **4½ to 5½ inches** in diameter, thus enabling us to realize **net \$4 000 or more, from the 1¼ acre** that we intend to grow for the cut flower trade. These will be marketed in at least **40** and **possible 60 different cities** in the **United States**, from **Boston, Mass., to Denver, inclusive**. This is our proposed plan for creating a demand and sale for our **unparalleled chrysanthemum type of Aster, Lady Roosevelt**, for those who may in the near future become producers of this **special Aster** from the seed they are now purchasing from us. **FOR** still further **desired information** send for our **illustrated folder**—which also contains other very **interesting information** relative to other **April crops** we are engaged in the culture of.

CHARLES A. KIBBE,
THE SCIENTIFIC INTENSE CULTURE RANCH, ELMHURST, ILL., Box 344.

The Annual Rose Number

Will Be Issued March 21.

This Number will contain many features in connection with the Meeting and Exhibition of the American Rose Society and will be of Special Interest to Rose Growers.

CATALOGUES RECEIVED.

Ross Bros., Wichita, Kansas. Seed Catalogue for 1908. Agricultural and garden seeds and implements.

S. J. McMichael, Findlay, Ohio.—Wholesale Trade List of Vegetable, Greenhouse and Bedding Plants.

Benjamin Hammond, Fishkill-on-Hudson, N. Y.—Catalogue of colors, putty, insecticides and chemicals.

Wagner Park Conservatories, Sidney, Ohio.—Fine Nursery Stock for Landscape Effects. Interesting and well-illustrated.

Charles F. Saul, Syracuse, N. Y.—List of Select Seeds, Implements and Poultry Supplies.—A substantial catalogue of well-tested varieties.

A. Lenthy & Company, Roslindale, Mass.—Wholesale Price List of Palms, Ferns and Decorative Plants. Not an extensive list but includes the best of the standard trade material.

Eastern Nurseries, Jamaica Plain, Mass., M. M. Dawson, Mgr.—Wholesale Trade List for Spring, 1908. A very choice list including many varieties usually hard to find in nursery offers.

F. & F. Nurseries, Springfield, N. J.—Trade List for Spring, 1908. The extensive nursery issuing this concise wholesale list is now a department of the American Nursery Co., with central office at New York City.

Thomas Meehan & Sons, Inc., Germantown, Philadelphia, Pa.—Meehan's Manual of Outdoor Plants, Spring, 1908, 46th Edition. The best hardy shrubs, trees and border plants are well presented in this elegantly arranged catalogue.

Bay State Nurseries, W. H. Wyman, North Abington, Mass.—Wholesale List of Trees, Evergreens, Vines, Roses and Herbaceous Perennials for Spring, 1908. A very comprehensive catalogue, particularly strong on phloxes, peonies, irises and hardy roses.

Ellwanger & Barry, Rochester, N. Y.—General Catalogue of Mt. Hope Nurseries, established 1840. As interesting as ever and still one of the best in contents and arrangement. Some splendid half-tone illustrations are shown for first time. Accompanying the catalogue is a pamphlet entitled "How to Have Roses," compiled from contributions to the Country Gentle-

From London: P. Henderson & Co., 63 sks. peas, 1 cs. seed.

NEWS NOTES.

Wm. Elliott & Sons' plant auction sales start for the season at noon on March 17, St. Patrick's Day, at 201 Fulton street, New York. The genial spring warmth which the emerald holiday is presumed to usher in makes it an ideal opening date for this time-honored occasion for which the popular interloctor, W. J. Elliott, has been industriously polishing up his vocal chords for some time back. May he have a numerous and liberal audience.

The Agricultural Guild of the University of Chicago has been formed. Its aim is "to supplement without duplicating the work of the agricultural

colleges by giving the practical training which their limited equipment and different purpose prevent them from providing." At first ten farms will be included in the plan, each highly specialized, and students will be transferred from one to another. A three years' course of training is planned. Students are recompensed for their service and a satisfactory completion of the course is rewarded with a diploma and \$200.

THE BOSTON VIOLET

The people today are looking for New Violets just as much as they are for new roses or carnations.

THE BOSTON VIOLET

For the past two years has been placed before the most sceptical buyers in America and they prefer it to any other.

THERE'S A REASON

The Boston Violet is the largest, the most fragrant, it has a very pleasing color, and it is a great keeper.

THE BOSTON VIOLET

Is a variety that is early grown, it is the strongest grower and is in crop from September to May.

THE BOSTON VIOLET

Was awarded a First Class Certificate of Merit by the Massachusetts Horticultural Society and a Report of Superior Merit by the Gardeners' and Florists' Club of Boston.

Distribution will Commence in April. Order Now.

PRICES—\$2 per 12 ; \$12 per 100 ; \$100 per 1000.

DREER SPECIALS

Golden Yellow Calla Elliottiana We have a fine lot of bulbs of this beautiful variety which if started into growth now can still be flowered for Easter. This Golden Calla is still but little known and always attracts attention. \$2.00 per doz., \$15.00 per 100.

Fancy Leaved Caladiums We are this season offering the finest set of Standard Fancy Leaved Caladiums that has yet been sent out at popular prices, 25 distinct sorts. \$1.50 per doz., \$10.00 per 100; the set of 25 varieties for \$3.00.

New Fancy Leaved Caladiums A set of twelve wonderful fully marked beautiful varieties. The set of 12 sorts for \$2.50, or \$20 per 100.

Canna King Humbert The best of the dark leaved, very large flowered brilliant scarlets and a perfect gem that pleases everyone. We are long on this and offer at the special price of \$1.25 per doz., \$8 per 100.

Canna Grand Chancellor Bulow A remarkably rich crimson scarlet that never sunburns, with flowers of good size and very free, was much admired in our trial grounds during the past two seasons. \$1.50 per doz., \$10 per 100.

Canna Frau Marie Nagel An introduction of Wilhelm Pfizers, the Canna specialist of Germany who has given us many important varieties. It is the most floriferous of the large creamy white sorts and contrasts fine with high-colored sorts. \$1.25 per doz., \$8 per 100.

New Decorative Dahlia Souvenir de Gustave Doazon The most sensational Dahlia of the season, of mammoth size, producing under ordinary cultivation flowers 6 inches in diameter and can be grown to measure full nine inches, it is of free growth and remarkably free flowering. Certain to become one of the most popular sorts for cutting and decorating, its pure scarlet color, immense size and unique form guarantee its future.

Rex Begonias We have at the present time the finest lot of Rex Begonias that we have been able to offer for many years, twenty distinct varieties, fine plants in 3 inch pots, \$1.25 per doz., \$8 per 100; the set of twenty varieties, one of each, for \$2.

A WELL-MADE WREATH.

The wreath form is deservedly the most generally preferred among the great variety of so-called "designs" which florists are called upon to provide for funeral use. Unlike many of the other emblematic devices which find more or less favor the wreath affords latitude for the display of unlimited taste and skill in color effect and floral combinations and is, in the hands of the artist, very much more than a wire frame with various short stemmed flowers stuck into it. Its sentiment is touching and appropriate and whatever prejudice may exist

among cultivated people against the type of "funeral design" as often seen can, at least, be waived when the design in question is a well-made wreath. The example shown in the accompanying illustration, the design adopted by the Kentucky Society of Florists and made by Jacob Schulz, is in excellent taste and is suggestive of a great variety of graceful combinations whereby the choicest flowers may be made to serve the purposes of a funeral tribute without mutilation or doing violence to their natural gracefulness.

NEWS NOTES.

J. A. Kepner, florist, Harrisburg, Pa., will remove to 1110 East Market St.

C. P. Brunner is in charge of the cut flower department at Roth & Livingston's drug store, Springfield, O.

Elder & Carhart is the name of a new firm of flower growers at Mineral Ridge, O., located at Cherryhurst farm.

George E. Valker has left Minneapolis for Minot, N. D., where he and Ernest Eakman will open a flower store.

About thirty of the Indianapolis florists made the trip to Richmond last Wednesday and were well repaid for their time.

George M. Dideman and Joshua Horner, Jr., have been appointed receivers for The Fernery, Baltimore, Md.; liabilities, \$3,200.

The employees of J. A. Budlong Co., Providence, R. I., presented a purse of \$100 to the family of Henry Hobday, whose life was so suddenly taken recently.

W. H. Sabin is in charge of the northwestern branch of the Phoenix Nursery Co., at Fargo, N. D., and S. D. Weymouth of the eastern branch at Waterville, Me.

George C. Hartung's greenhouse near Chicago will be known as the Kensington Greenhouses. Large consignments of geraniums are being shipped, and the prospects for spring trade are reported good.

Messrs. Knight & Struck have been given the option for the next six months on the sale in America of *Cypridium* Gay Gordon (*C. Thompsonii* X *Lady Wimborne*), never before offered in this country. This is a wonderfully beautiful flower. The stock is thus far limited to fifteen plants.

PHILADELPHIA NOTES.

On the sick list this week are Arthur Niessen of the Leo Niessen Co., and J. D. Eisele of Dreer's. These active and hustling spirits no doubt make ideally patient (?) patients.

Visitors this week were: N. E. Keeney of N. B. Keeney & Sons, LeRoy, N. Y.; W. A. Manda, South Orange, N. J., and Mr. Smith of Smith & Fetters, Cleveland, O.

Joseph Callahan, lately with Penneck Bros., now runs the old Charles I. Kent place at 3804 Market street. Among his assistants are Mr. Eastwell, late of the Bellevue-Stratford Flower Shop.

Jno. E. Andre of Doylestown, who has made a record for himself on Brides and Bridesmaids in the Philadelphia market the past ten years, thinks My Maryland one of the best propositions among the newer rose claimants. Jno. H. Dodds and Samuel Batchelor are also favorably impressed with My Maryland. These gentlemen are famous prize-takers at the Philadelphia shows, and both of them will grow the new rose the coming season.

Of Interest to Retail Florists

WASHINGTON The past week, the last before the beginning of Lent, proved to be one of the busiest of the season. There were numberless gaieties and several funerals of more than ordinary concern, the one of the Rt. Rev. Henry Y. Satterlee, Bishop of Washington, being a national bereavement, as was testified by the great number of handsome floral offerings. The interment was in the little sanctuary at Mt. St. Alban, the site of the proposed Cathedral of SS. Peter and Paul, and the decorating of the chancel was a perfect triumph of floral art. There was nothing to mar the purple and white effect, only lilies and violets being used and the graceful southern smilax. Floral pieces numbering up in the hundred figures were sent by every faith and well-nigh every church in Washington, to say nothing of those from private individuals and persons high in public rank.

CHICAGO The retail stores have had a fine chance to stock up and make a very beautiful display in their windows for the past week with spring flowers predominating and a background of azaleas and potted tulips all at very low prices. As one retailer remarked, they have waited a long time for the season to come when they can sell carnations at 50 cents per dozen at a profit and violets at 25 cents per bunch, in some of the downtown stores; also carnations at 25 cents per dozen.

A fad for the "Japanese air plant" is on. Many of the retailers are utilizing this very attractive little sea moss to dispose of the small jardinières and bric-a-brac that collect in a retail store. The demand has caused a scarcity of the plant and an advance of twenty per cent. in price.

NEW RETAIL FLOWER STORES.

- T. L. Metcalf, Owensboro, Ky.
- Nanz Floral Co., Central City, Ky.
- Schoen Floral Co., 409 Adams street, Toledo, O.
- Wellston Florist & Nursery, 6103 Easton avenue, St. Louis, Mo.
- Kensington Flower Shop, 689 Boylston street, Boston., H. M. Collins, proprietor.

Spruce, hemlock and balsam boughs for lining graves, protecting plants, and for backgrounds for large decorations should be in the regular stock of every retail florist. Harry J. Smith of Hinsdale, Mass., makes a specialty of supplying them by 100 lbs., ton or car-load lots, or will send sample bale on request free outside of transportation charges.

The floral department at Cafe Martin, Broadway and 26th street, New York, is now in charge of David D. Howells.

ATLANTA FLORAL CO.
41 Peachtree Street, ATLANTA GEORGIA.

THE FLORISTS' SUPPLY HOUSE OF AMERICA

Without a rival in knowledge of the requirements of the trade and the ability to supply them. Our New Illustrated Catalogue, recognized as a work of art unprecedented in its line for variety, novelty and completeness, tells the story fully, and if you have not yet sent for it, do so now.

'TIS FREE TO EVERYBODY IN THE TRADE

H. BAYERSDORFER & CO., 1129 Arch St., Philadelphia, Pa.

FLOWER MARKET REPORTS

BOSTON This market is overloaded with flowers of all descriptions. The week has been phenomenally dull and the product has been coming in regardless of the fact that it is not needed. American Beauty roses are not plentiful, but if they were there would be no place for them. As to everything else the dealers are at their wits' end to find storage room and a possible buyer. Prospects indicate a dull Lent.

BUFFALO For the past two weeks the market has been in bad condition and it looks as if the Lenten dullness had already come upon us. Stock came in abundantly and almost everything along the line suffered. The zero weather did not help matters any. No better quality of carnations, roses, and other flowers have been had during the season, but only small prices if any could be obtained. The lily family was well represented but they failed to move from their position; also lily of the valley and all bulbous stock, though there has been less of the latter than in previous years. Good Beauties have not been plentiful, though Brunner, Richmond, Killarney, Ivory and other teas have been abundant with prices on the downward scale. Sweet peas, violets, gardenias, etc., were in good supply with light demand.

CHICAGO Thunder and lightning and wind in and around Chicago, ushered in the month of March like the traditional lion, thereby affording the consolation that early spring is assured and of course fine weather for Rose Show week at the latter end of this month. The market for the past week was very dull, with plenty of carnations, roses and other stock. It was a treat for the retail stores to be able to stock up for little money. For good shipping stock the prices remain about the same. American Beauties are very scarce. New York violets and singles are being jobbed off at any price. Lilies and callas are plentiful with little demand; other bulbous stock about the same. Lily of the valley of good quality commands good prices. The shippers are at a loss to know why there were so few orders from New Orleans. In the past years the Mardi Gras festival has been the best shipping day out side of holiday business, as much as two full express cars leaving here, but this year there was but a slight increase over regular shipments. Perhaps there was plenty of stock at home. The Lenten season does not as a rule make much difference in the western cities, so steady prices are looked for from now on.

INDIANAPOLIS Trade conditions for the past week were a little better with a few small decorations and floral work. Sweet peas, lily of the valley, freesias, daisies and lilacs are coming in in good supply with fair demand. Bulbous stuff is more than enough with daffodils selling the best, tulips being a drag on the market. Business for February will fall off 15 to 20 per cent. compared with last year.

NEW YORK The coming in of Lent has accentuated what was already a badly demoralized flower market and at present everything is flat. As to prices, they have been below reason for some time. The growers and dealers have got used to this fact and so the shock of the Lenten season has made no impression, for everybody is "case-hardened." As to the coming weeks, all are reconciled to the worst, and whatever is to happen is to happen.

PHILADELPHIA Some say conditions are improved here this week; others that they remain about the same. American Beauty roses are scarcer, but there is no appreciable advance over quoted rates. Richmond is good and sells fairly well. Killarney is still off color a little. Brides are still in slack demand. Carnations were never so plentiful. Conditions on the latter here are worse if anything than represented in last report. Violets go a little better. No improvement on bulb stock. Lilac and Acacia pubescens sprays find a ready market. Greens also are in healthy condition. Orchids scarce.

WASHINGTON There is a dearth of all kinds of good green in this market. It is hard to obtain either kind of asparagus at any price and smilax is not to be thought of. Carnations and sweet peas are too plentiful to be interesting though up to the present writing they have kept up in price. The market is flooded with all kinds of bulbous stock, which sells readily. Could the weather behave itself three consecutive days, the spirits of persons would go up even if the price of flowers did not.

TWIN CITIES The market has been quite steady of late with the exception of violets and bulbous stock of which there is some surplus. Roses are still short except American Beauty. Wellesley, Golden Gate and Killarney are not grown very extensively here; instead some of the growers have Kate Moulton, which brings about the same as Richmond. While roses had an upward tendency last week, violets came down some, retailers selling them for 25 cents a bunch of 25.

BUSINESS CHANGES.

Graser & Humphreys succeed the Mt. Sterling Floral Co., Mt. Sterling, Ky.

The greenhouses formerly occupied by Miss Maria Minge, Mobile, Ala., have been sold to T. Loding.

MacIntosh, the florist, will be located at the corner of 47th St. and Broadway, New York, after May 1.

Wurster & Higgins, Manchester, Mich., have dissolved partnership and will work on independent lines hereafter.

C. E. Howe of Dover, N. H., has bought the business of D. E. Dow of Laconia, and will carry it on with Roy Thomas of Dover as manager.

Chas. H. Fisk, who recently took charge of the Halle store at 548 W. Madison St., Chicago, has now transferred all his interests to his Ogden avenue place.

INCORPORATED.

Alpha Floral Co., Denver, Colo.; E. S. Kennedy, L. O. Brown, W. S. McClain; capital, \$3000.

Holm & Olson Co., St. Paul, Minn.; G. P. Holm, O. J. Olson, S. D. Dysinger; capital, \$75,000.

Central Nursery & Floral Co., Kalamazoo, Mich.; L. P. Thurston, J. L. Sornberger, W. P. Upjohn, V. L. Palmer; capital, \$50,000.

NEWS NOTES.

The stock of the Mt. Hope Floral Co., Bangor, Me., was disposed of at auction on February 29.

The contract for constructing a new greenhouse in Schiller Park, Columbus, O., was awarded on February 24 to Borrer & Feustil, their bid being \$4,925.

Among the appropriations made by the House of Representatives of Rhode Island recently was \$1,000 for the Woonsocket Agricultural and Horticultural Society.

Breitenstein & Flemm, florists, Pittsburg, Pa., have taken a ten years' lease of the building 638 Liberty avenue, which is to be thoroughly remodelled for their occupancy.

Chas. A. Kibbe, the Lady Roosevelt Aster man, writes us from Elmhurst, Ill., that orders for seeds of this fine introduction are coming in from points as distant as Alameda County, Cal., where the need of a reliable aster of modern type is seriously felt.

The second annual banquet of the Albany Florists' Club (N. Y.), was held at Hotel Belvidere February 25. Fred Goldring was toastmaster, and in response to toasts John A. Howe, Jr., rendered several recitations, James Karins from the Pacific Coast spoke, F. A. Danker and Wm. C. King were heard from.

AN ORCHID SOCIETY PROPOSED.

A meeting is to be called for next week in New York for the purpose of discussing the desirability of organizing a society devoted exclusively to the interests of orchid culture. It is proposed to hold periodical exhibitions under the auspices of the society in various centres. Both amateur and professional orchid fanciers are interested in the movement.

"SCALECIDE"

HAS MADE SPRAYING EASY THEN WHY NEGLECT YOUR TREES?

The N. Y. Herald, November 17, '07, says: "The chances are about a hundred to one that you have the San Jose Scale on your place and do not know it," and advises the use of "SCALECIDE." This is good advice. "SCALECIDE" has been tested and tried, and found thoroughly effective. The same yesterday, to-day, and all the time. One gallon makes 15 to 20, ready to use, by simply adding water.

Prices: 1 gal., \$1.00; 5 gal., \$3.25; 10 gal., 6.00; 50 gal. hbl., \$25.00, F. O. B. our factory. Order to-day. Write for booklet Waad free sample.

WEST SIDE AVENUE STATION (C. R. R. OF N. J.)
JERSEY CITY, N. J.

Have not been established 50 years, but long enough to convince the wide awake Florist and Gardener that it is to his interest to place his work in thoroughly practical hands.

(150,000 sq. ft. glass erected in 1907 will substantiate this claim)

And why not? My material is the best that can be secured. My iron frame construction has every modern feature that years of practical experience can embody.

AND THEN THERE IS THE COST TO BE CONSIDERED.

Why not let us take up this important question now?

In ordering goods please add, "I saw it in HORTICULTURE"

With the open mortise joint the water easily soaks in, and not only the side but every part of the joint decays.

This is what happened to the side rail of an open mortise joint after the sash had been in use but nine years. Photo made the fifth of October, at Middle Village, L. I.

And here is an L & B sash, made L & B way, that has stood the racket for eighteen years, and is good for half as many more. Photos taken this year at the largest florist seedsman's place in the country.

EVERY USER OF SASH SEND

for our SASH THAT LAST CIRCULAR. It is not a lot of "hot air" about our sash, but a plain, common sense statement of the right and wrong way to make sash, and why the wrong way is wrong. It includes several tests, prices and freight allowance. Send for it.

WE MAKE EVERY PART OF A GREENHOUSE
BUT THE GLASS. WE SELL ANY PART

WHERE AVAILABLE SPACE COUNTS

Here is a range of U-Bar houses erected at Tuxedo Park. You can see that the available ground space is somewhat limited by the existing roads. In such a location, every bit of bench room must count to best possible advantage; each house be equally efficient. No other houses meet these demands like the U-Bar, because of its extreme lightness, giving to each house much more light than other constructions. Send for catalog, it shows you why.

MARKET and 49th STREETS., PHILADELPHIA, PA.

CARNATION CUTTINGS

We are in unusually good position to supply exceptionally well-rooted, healthy stock. We have such a large quantity of flowering plants that we propagate only from heel cuttings from flowering shoots. Our cuttings are rooted in light, sunny, airy houses, and we are sure will satisfy the most critical buyer. A prominent carnation grower writes, "You seem to be the only firm in the business that knows how to pack stock and have it reach the buyer in good condition, and I have always found your cuttings cheaper than the same varieties from others at much lower figures." While our prices may not always be the cheapest, we certainly can give, quality considered, as good value as, if not better than, is obtainable anywhere.

WINSOR which we introduced last year has proved to be the finest novelty introduced in years. We think it is the most profitable variety grown today, considering its fine color, splendid keeping qualities, and productiveness. When properly grown, it leaves little to be desired, and almost every one succeeds with it.

WHITE ENCHANTRESS the best all-round white carnation, on account of its large size, long stem, earliness, and productiveness. Our White Enchantress, exhibited at the Carnation Convention at Washington, was the only White Enchantress exhibited that received an award.

Strong rooted cuttings, now ready for delivery, from sand \$6 per 100, \$50 per 1000; from soil, \$7.50 per 100, \$60 per 1000.

We offer also **Beacon** and **Red Chief**, from sand, \$6 per 100, \$50 per 1000; from soil, \$7.50 per 100, \$60 per 1000. Also **Victory**, **Melody** and **White Perfection**, from sand, \$4 per 100, \$35 per 1000; from soil, \$6 per 100, \$45 per 1000. **Variiegated Lawson**, **White Lawson** and **Red Lawson**, from sand, \$3 per 100, \$25 per 1000; from soil, \$4 per 100, \$35 per 1000. We can supply, also, **Winona** and **Afterglow** at \$12 per 100, \$100 per 1000.

Buyers will find transplanted stock offered from soil well worth the difference in price

F. R. PIERSON CO., - - Tarrytown-on-Hudson, NEW YORK

CHRYSANTHEMUMS

Novelties for 1908, in 2½ inch Pots, Ready for Immediate Shipment

MRS. NORMAN DAVIS. Pure white, an improved Mme. Carnot. Best exhibition white out.
DOROTHY GOLDSMITH. Might be called a bronze F. S. Vallis, and easy doer. The finest bronze out.
KATIE PALGRAVE. A clear, waxy white, resembling Mrs. A. T. Miller, but fuller, and two weeks later.
MRS. SOUTHGATE. As large as F. S. Vallis, but a brighter yellow.

O. H. BROOMHEAD. An immense, solid bloom, rich deep rose, with sturdy dwarf habit.
W. MEREDITH. Dark crimson, with gold reverse. An enlarged Edwio Molyneux. A reliable variety.
MARY DONELLAN. A splendid deep yellow.
JOSEPH STONEY. Best exhibition crimson.
HAROLD WELLS. Pure white. A monster.
MRS. J. C. NEIL. Soft canary yellow. An improved Cheltoni.

The Picture's the Thing in Selling Flowers

TASTY printed matter, reproducing flowers from photographs, will create increased demand for the flowers themselves. If the photographic reproductions are made in the natural colors, by modern processes, an even greater increase in demand will result.

The live and up-to-date florist has stationery and printed matter in harmony with his stock. The McFarland organization makes such stationery for this kind of florists. The average job printer cannot begin to do it—he doesn't know how and hasn't the facilities.

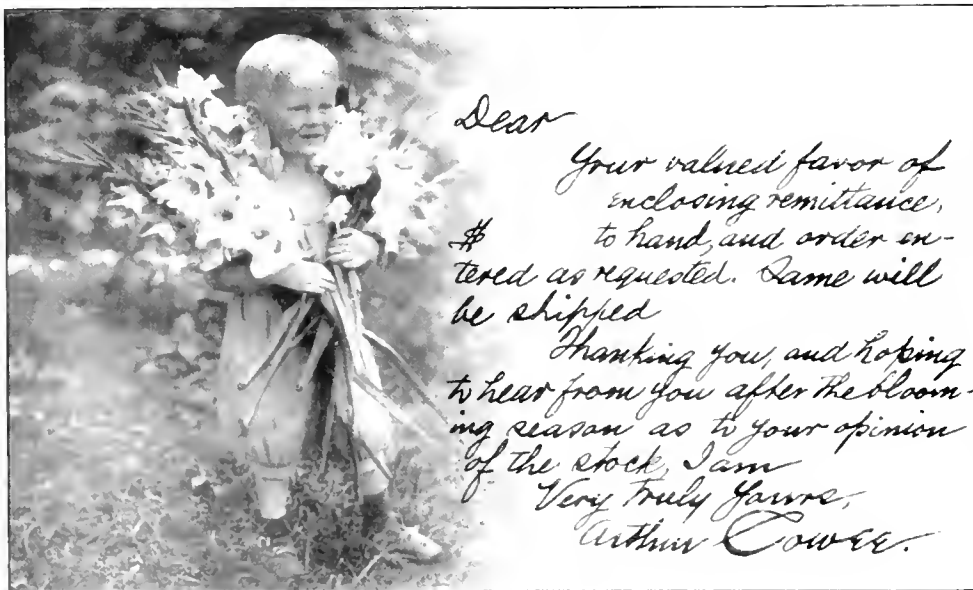

The surpassing equipment and trained men at our service enable us to turn out work of a quality not obtainable elsewhere at any price—whether on a job of 500 postcards or 100,000 big catalogues.

Here are some specimens with prices. Over 10,000 photographs of other good subjects from which to choose are awaiting your call. Further information cheerfully supplied.

There's a form of printed matter your business needs. Ask The McFarland Publicity Service!

A couple of cents spent in getting every order the courtesy of acknowledgment will help you to secure additional business from home and regular customers. Postcards are the ideal form.

Price f. o. b. Harrisburg: First thousand, \$15; additional thousands, \$3.50 each. Cash with the order.

Dear
Your valued favor of
enclosing remittance,
to hand, and order entered
as requested. Same will
be shipped
Thanking you, and hoping
to hear from you after the bloom-
ing season as to your opinion
of the stock, I am
Very Truly Yours,
Arthur Cowee.

Postcards are a splendid medium through which to tell the people where you are and what you sell. All the back and one-half of the front of the card may be used for your message.

Price f. o. b. Harrisburg: First thousand, \$15; additional thousands, \$3.50 each. Cash with the order.

We have in stock large numbers of designs suitable for the illustration of postcards. When these are used with a picture instead of an engraved message, we can give better figures.

Price f. o. b. Harrisburg: First thousand, \$6.50; additional thousands, \$3 each. Cash with the order.

In our stock of over 10,000 original horticultural photographs, there are thousands which no florist in your section has used. These photos enable us to give endless variety to postcards.

Only a few examples of our designs can be shown hereon. Write us and we will submit others to suit your needs.

THE McFARLAND PUBLICITY SERVICE, HARRISBURG, PENNSYLVANIA

The Culture of Phalaenopsis

The frontispiece of this issue of Horticulture shows a house of Phalaenopsis Aphrodite as grown for Mrs. B. B. Tuttle of Naugatuck, Conn. There are about 250 plants of Aphrodite with an aggregate of over 1400 flowers. There were no Ph. Schilleriana in bloom at the time the picture was taken but a few good plants may be seen hanging from the roof. About 450 Phalaenopses are grown here, representing the following species: Aphrodite (often wrongly called amabilis), Schilleriana, amabilis or grandiflora, Luedemanniana, rosea, amethystina and the natural hybrid between Ph. Aphrodite and Schilleriana called Ph. leucorrhoda.

As the first four mentioned rank amongst the most beautiful and best paying cut flowers in the market it may interest some of Horticulture's readers to hear something of my method of growing this beautiful class of orchids.

TYPES OF PHALAENOPSIS.

Amabilis,
or grandiflora
Stuartiana

Aphrodite
Schilleriana

Rosea

Phalaenopses, as a rule, are considered hard to grow and many otherwise good gardeners fight shy of them on that account. But after four years' experience with these plants coupled with careful observation and many experiments I have found that they can be grown almost as easy as cattleyas and indeed more easily than some varieties of that genus, providing a few simple rules are strictly adhered to. First of all keep the plants free of all insects, especially thrips; second, do not keep the plants nor the air of the house in which they are grown, saturated with moisture during winter; third, give plenty of fresh air whenever possible, and, last but not least, give them all the light possible without scorching the leaves.

Insects, especially thrips, must be kept down or the plants will not thrive. If the plants are grown suspended from the roof snails and cockroaches will not trouble them much but thrips, red spider, ants and water-bugs will find their way to them no matter where they are and a sharp lookout must therefore be kept.

Nicoticide is perhaps the best and cheapest compound for vaporizing but it must be used stronger than is recommended, else it will have but little effect on thrips and mealy bug. It will, unfortunately, injure tender ferns and therefore cannot be called a safe insecticide, but it is as safe as and kills more insects than any other insecticide I have tried. It will not injure the flowers of Phalaenopsis although a slight fumigating with tobacco stems will put them to sleep and will also

cause little eruptions or warts on the tender young leaves. The best and surest way to get rid of all these troublesome insects is to dip the plants bodily, leaves and all, into a tub containing some Nicoticide and enough fir tree oil to make the water look milky; to a butter tub full of water I use 2 oz. Nicoticide and 2 oz. fir tree oil; this solution will keep for several days and will not injure the plants.

This is the quickest and most certain way to find out if there are any thrips or other injurious insects hiding in the compost. Thrips will quickly rise to the surface and after a few seconds are put out of commission. Water-bugs will live in a solution of the strength recommended above for half an hour or more; however, they will soon come out of their hiding place and may then be killed by hand; the same holds true of snails and cockroaches. Red spider and mealy bug can easily be kept down by an occasional sponging and frequent syringing.

During the winter I try to keep the temperature of the house between 60 degrees and 65 degrees at night and 10 degrees higher through the day. But it often happens that the temperature drops to 54 degrees before morning and then again it may run up to 75 degrees some nights, which will do no harm, because the plants and atmosphere are kept on the dry side during winter with just a little air on the bottom at all times except in extreme cold weather.

The house is damped down once a day and the plants

syringed every bright morning, using a Gem nozzle for that purpose. Besides this damping down and syringing the plants are dipped once in a week or ten days in weak manure water.

In summer when fires are out and the house shaded less watering and damping will be required, otherwise that fatal disease called "rot" will make its appearance. A hot stuffy atmosphere is always sure to bring it on. I always keep a little air on top and bottom when there is no heat in the pipes and, should the weather be cold and damp for any length of time, a little fire is started up, even if it be in July or August. It does not matter how high the temperature goes in summer, day or night, so long as there is a good circulation of air.

During hot weather the plants require some shade, but let it be of some temporary kind. I use roller blinds made of cloth which are let down only when absolutely necessary to prevent the leaves from getting scorched. From the first week in September until the end of March the ground glass affords all the necessary shade.

Most of the plants are potted in osmunda fibre but some are in fibre and moss and some in all moss; it matters but little what they are potted in as long as the compost is open and other conditions are right. Osmunda fibre saves lots of work for, once a plant is potted in it, it will need no more attention outside of watering and keeping clean for the next three or five years, whereas moss will have to be renewed at least once a year. One other point in favor of osmunda fibre is that it dries out quickly and so lessens the danger of rotting the roots by keeping the compost wet too long.

By giving the plants lots of light and air in the fall they will be hardened off for the dull winter months and

PHALAENOPSIS SCHILLERIANA.

consequently will stand a lower temperature than is usually given them; the flower spikes will be of better substance and last much longer when cut or on the plant.

At this writing I still have some flowers of *Phalaenopsis Aphrodite* in good condition which opened up before Christmas. *Phalaenopsis Schilleriana* will not last over three or four weeks. Care should be taken not to let the same spike flower a second time or the plant will be ruined. It is best to cut the spikes as soon as the last bud has opened.

M. J. Cope

Points on Field and Indoor Culture of Carnations

In a short talk which I gave before the Boston Gardeners' and Florists' Club, on the evening of February 25th, I put all carnation varieties into classes, mentioning three different classes which appear to me. The first class with heavy foliage and leaves which incline to be curly. Winsor and Lawson are the two best examples of this class, for which there is nothing, in my opinion, but indoor culture.

The second class which I made includes the varieties which have thin foliage and a tendency to greater length between the joints. In naming varieties which would be typical of this class, I should mention Mrs. Patten, for the reason that as a general rule it conforms to these conditions of growth, i. e., thin foliage and long joints. As a variety to grow inside, it has not been the most successful, making a very small plant early in the year and not filling up until along in the winter. The best Mrs. Patten that I ever saw (and they were not grown by me) were field-grown plants. Aristocrat was grown to perfection this year in the West, the method of handling being field culture, and it has not been with us a successful variety to grow inside. The poor success which we had with Aristocrat we attribute partly to that cause, as it failed to make a large enough plant early in the season to stand the strain of blooming.

White Perfection also makes a very small plant with inside culture. While we have not grown it in the field, we believe it would make a better plant if benched early from the field. I mentioned Enchantress as one of the varieties which could be grown either inside or outside. Rose Pink, Enchantress, as well as White Enchantress would do equally well with the same treatment, the Enchantress family being typical of the third class.

Among the new varieties which we have in stock Miss Sarah Hill seems to be a promising candidate for indoor culture; a short, thick cutting, inclining to break from the bottom, or very low down. For a plant of this character, to secure the best results, I believe we should have indoor culture.

Splendor seems to be a very free grower, and one which will, if grown inside, make very thin shoots, and I believe that field culture will give a more substantial plant for benching.

Winona, of which we shall grow 1,000 plants, will, I think, be a good variety for either field culture or indoor culture, as the young plant is taking somewhat the nature of Enchantress with us, being a little more free and vigorous in growth than either Lawson or Winsor, and yet making plant enough to warrant its being substantial, without its being put into the field to force a bottom growth.

President Seelye has not made enough growth yet in pots so that we can determine its character.

I trust that this will explain to the satisfaction of your several correspondents all the points on which they have asked for fuller details.

Wallace R. Pearson

Fashion in Flowers

In the issue of March 7 HORTICULTURE presented to its readers an interesting illustrated article entitled "Flowering Apples."

The article being apropos, considering the vast amount of just such material being used at the present time, a few words regarding the various uses to which these marvelous blooms are put may be of concern to those interested in fair Flora's fashions, for fashion in flowers as in all things else, is assured.

It is safe to say that at any event of importance the pyrus, the prunus, the lilac and kindred dwarfed plants in blossom play an excellent part. Nor does the use of these gems of admiration stop at the decoration of homes, as bouquets and other forms of floral decoration claim an important part of their possibilities.

Much is being done in the way of bunches tied carelessly together and composed of these fruit blossoms.

The bouquets are frequently tied with gauze or other dainty ribbon to match or in pleasing contrast with the flowers. The whole effect is beautiful, and when the bunch is carried, as most of them are this season, the result is striking if not wonderful.

Imagine a debutante laden down with floral offerings, too many to carry at one time, and who with a desire to do honor to each donor, takes advantage of the opportunity to release herself from a burdensome duty and at the same time unwittingly sets an example which in time becomes a fashion, and you will behold the girl of the hour with bouquet tucked under her arm (the left arm, usually), the flowers pointing heavenward and the stems in the opposite direction, thus giving freedom to both hands. Such a bunch of flowers is generally known in New York as the "Arm bouquet," although it is no doubt sailing about under an alias.

But let not the gentle ones be deceived; the arm bouquet has not become a monopoly and never will, as the formal bouquet, like the brook, will keep on forever. The shower bridal bunch is yet in vogue, although the prayer book with a bookmark of lilies of the valley has been used more this season than formerly.

And history will repeat itself in fair Flora's affairs as in all others, for how many of the present generation are aware that the Camellia Japonica, the fashionable flower of today, is but the resurrected cast-off, but once recognized indispensable gem of the conservatory.

HORTICULTURE's value to the progressive Reciprocity culturist is well recognized. Advertisers know it and the liberality with which they use its columns is good evidence that they are aware the paper is read by the best buying element in the trade. Nevertheless we are far from satisfied. The usefulness of HORTICULTURE would be vastly increased if every reader would help by contributing little items of experiences, the reading of which would help his fellow-grower or dealer, or by asking questions on points concerning which he himself feels the need of advice. There is an unlimited amount of knowledge and experience tied up in the heads of gardeners and florists which, if given out freely, would be of immense practical benefit to others, yet would work no injury to the interests of the giver.

One of the daily papers expresses regret at the decadence of the sense of chivalry of a generation back when etiquette demanded that flowers be sent always to a hostess before even the least formal entertainment and when a debutante had better stay at home than go to a ball without a bouquet of flowers. We are in full sympathy with the sentiments expressed by our contemporary, and no doubt our readers will also agree unanimsly. One cannot but wonder where all the flowers which are produced in such overwhelming profusion by the wholesale growers go to, especially when we consider how little evidence is in sight as to their use. Perhaps the pendulum may swing back again to the conditions that prevailed years ago and fresh flowers be once more recognized as an indispensable feature of every social affair, large or small. When it does, what a wealth of beauty the flower growers will be able to place at the disposal of their patrons as compared with the productions of the olden time!

Another glaring manifestation of retrogression and degeneracy is the use of artificial plants and flowers for the adornment of hotels and other places of public resort. Just how far our plant growers and dealers are responsible for the existence and prosperity of establishments devoted to the sale of artificial material we shall not attempt to say. It is doubtless true that disheartening experience with plants of delicate texture or unfitted for exposure through overforcing or other improper treatment has had its effect on those who should be buyers of quantities of fresh material but, whatever the reason may be, the present tendency to indulge in make-believe floral material when there is such an abundance of the natural product, calls for deliberate reflection and consideration as to the best means for directing public appreciation on right lines and bringing discredit on all forms of horticultural shams. And we might add that so long as the florist trade itself can be caught "with the goods on," in the form of green-dyed carnations or painted cycas leaves it is hardly in position to do much effective fighting on the right side.

AFTER ADJOURNMENT.

We have to apologize to our readers, a number of whom have told us of their fruitless search through the columns of our last issue for the "Private Gardener" paper, by Robert Craig, to which we called attention editorially. Late advertising copy was the cause of the holding over of Mr. Craig's paper until this week, and unfortunately we neglected to change our editorial line accordingly for all of which remissness we beg pardon.

We frequently hear predictions of the return of the camelia to its old time popularity with the flower buyers. That it will ever regain its prestige as a short stemmed cut flower to be wired and used flat in floral work we think very doubtful but that it will yet take a high place in the list of choice long-stemmed cut flowers as well as in small neatly grown blooming plants seems inevitable when one sees some of the beautiful new varieties offered such as are in evidence at the greenhouses of Julius Roehrs Company at the present time. One of the loveliest flowers is Reticulata, a brilliant colored single variety with large wavy petals resembling a fine hibiscus. Among the best of the double forms is Elegans Chandleri rose-pink often irregularly variegated and spotted with white.

A SONG FOR MARCH.

Who sings of March, must sing the mad,
Lone man-at-arms, the straggler clad
In motley white and brown—
Who in the wake of Winter's flight
Turns now to eager, now to fight—
Half hector and half clown,
One moment from a cloud-capped hill
He blares his slogan, wild and shrill;
The next with gusty laughter,
Outsteps the sunbeams as they dance,
And leers and flouts, with backward glance,
The maid who follows after.
O! sing the maid,
The light-heart maid,
Who follows, follows after.

He flees her down the lengthening days;
She follows him through woodland ways,
O'er hills and vales between,
And sets for mark of victory
On every bush and hedge and tree
Her flag of tender green;
And when her breath hath spiced the night
With promise of the warm delight
Of young June's love and laughter,
No other song may true hearts sing
But "Speed thy passing, March, and bring
The maid who follows after;
The light-heart maid,
The lily maid,
Who follows, follows after."
—T. A. Daly, in Catholic Standard and Times.

The above beautiful lines will delight the poetic soul. Shakespeare's glorious flash of imagination: "When well appareid April on the heels of limping winter treads," has here been supplemented with a new thought—piebald March—blustering—laughing—running; an original conception.

"Are as well satisfied with results from your paper as any."

WHITE BROS.

Gasport, N. Y., March 9, 1908.

"THE JAPANESE SHAMROCK."

March is here, blowing and spluttering. In a week or two we may look for the hepaticas. Meantime I am cheered even now, while the snow lies in my back yard, by the Japanese emblem of good luck—(Adonis Amurensis)—its green and golden flowers making a lovely patch of color above finely cut, fern-like foliage of the deepest green. This is the earliest-flowering hardy perennial in existence and a charming thing that everybody ought to have. As it is the Japanese "good luck plant" we might be justified in making an Irish bull out of it and calling it the Japanese "Shamrock." I got my first plant of it from J. D. Eisele of Drees's and his good words for it have been amply borne out by experience.

G. C. WATSON.

THE IRISH SHAMROCK.

Strictly speaking, the word "shamrock" is not Irish but comes from the Arabic "shamrakh" signifying trefoil. Most commentators start out with St. Patrick however, and ignore the fact that the shamrock was held sacred in Iran and was emblematic of the Persian triad long before St. Patrick's day. St. Patrick used the plant to illustrate the trinity in unity to the early Christians. What plant he used nobody knows. Keough, Threlkeld, and other Irish botanists assert that Trifolium repens (white clover) is the true Irish shamrock and will have nothing to do with that "little, sour, puny plant, the Wood Sorrel," which Mr. Picheno and others have favored. Loudon favored the black medick (Medicago lupulina). Croker points out that as far back as 1689 the Irish themselves considered shamrocks and sorrel as entirely distinct. The "Irish Hudibras" printed in 1689 sings of "Springs, happy springs adorned with sallets,
Which nature purpos'd for their palats;
Shamrogs and waterless he shows,
Which was both meat and drink and clothes."
and further along the Irish are represented as

"Without a rag, trouses or brogues;
P'cking of sorrel and sham-rogues."

In another ancient Irish poem the "Hespero-neso-graphia" the following passage occurs:

"Beside all this vast bundles came
Of sorrel, more than I can name,
And many sheaves I hear there was
Of shamrocks, and of water grass."

Dr. Withering and Professor Rennie both favored the white clover as St. Patrick's plant, and from its commonness and the likelihood of the Saint taking the first three-leaved plant he came across to illustrate his meaning there can be little doubt that the white clover is the genuine Irish shamrock.

"The sweet little, green little, Shamrock of Ireland" has a sentimental significance, however, outside of the religious. Next to—

"Sublime potatoes, that from Antrim's
To famous Kerry, form the poor man's
store."

it is probably the most universally distributed plant we know and one of the most useful—besides typifying to us all that is charming and lovable in

the Irish character—a race that blends in happy unison.

"Three godlike friends,
Love, Valor, Wit, forever."

At the present time the shamrock is as popular in London as in Dublin town or New York City and is therefore emblematic of the improved sentiments of imperial comity and good feeling which peace-loving citizens of the universe so rejoice to see. We can all heartily subscribe to the sentiment of the old song:

"The plant that blooms forever
With the rose combined
And the thistle twined,
Defy the strength of foes to sever.

"Firm be the triple league they form,
Despite all change of weather;
In sunshine, darkness, calm or storm,
Still may they fondly grow together."

The 17th of March will be here in three days, and it behooves every florist to have plenty of shamrocks for that day as the demand is sure to be greater than ever before. They will sell on sight. But you cannot sell them unless you show them properly.

GEORGE C. WATSON.

ILEX CROSSES.

Two beautiful species of Ilex are common in the fields of New England. The winter-berry, Ilex verticillata, which holds its bright red fruit well into the winter, and Ilex glabra, which bears black fruit, but holds its leaves bright and green throughout the winter. If the red fruit of the one could be as abundantly produced among the green foliage of the other as it normally is in the leafless species, we should have a most pleasing ornamental shrub. A number of attempts have been made to cross the two species, but in every case without result. Mention is made of some of these attempts in the annual report for 1903. As a practical means of securing much the same effect the two species may be planted together in such close contact that the red berries are intermingled with the green leaves and an excellent result obtained.—F. W. Card in Report of R. I. Agri. Exp. Station.

SOME WISE ADVICE.

Don't sell your goods on longer time than you buy them.

An advertisement without a price is like a story without a climax.

A small territory well worked is more profitable than a large farm poorly cared for.

The demand is insatiable and constantly growing for modern and improved implements.

Girls and business are very much alike. The more coy they are the more sedulously we must court them.

Is it true that your business is transacted in an illogical and unbusinesslike manner? If so a change is desirable.

Newspaper space should be fertilized with brains, planted with desirable goods, cultivated with attractive prices, and it will yield a rich harvest of profitable sales.—Implement Age.

"Enclosed you will find check in settlement of your bill to date and we will ask that you kindly discontinue ad. in Buyer's Directory as we have about sold all tuberoses."

T. V. RIVENBARK.

Wallace, N. C.

HORTICULTURE

NEWS OF THE CLUBS AND SOCIETIES.

NEW JERSEY FLORICULTURAL SOCIETY.

The monthly meeting of this society was held on the 6th instant. The evening was observed as a "Carnation Night", and thirty-three vases of the divine flower, with orchids and roses, bore evidence of the strength of the society in strong men. Many were kept away by the storm, but the rooms were crowded from an early hour until near eleven o'clock. W. A. Manda's vase of a hundred blooms of his new pink seedling No. 29, soon to be introduced by John N. May, attracted much attention, and its possession of every quality except extra size promises to make it a particularly valuable commercial sort. Its merits were recognized by a certificate reward. John E. Haines of Bethlehem, Pa., was present with his Imperial and John E. Haines. James D. Cockeroff of Northport, L. I., sent Harvard and Oscar Carleson, Fairfield, Conn., his No. 14 Seedling.

Contributions from neighboring estates were in force. Among the gardeners exhibiting carnations were John Hayes, George Oakley, William Reid, D. Kindsgrab, Max Schneider, Peter Duff and Phillip Cox. Roses and sweet peas were shown by John Gervin, antirrhinums by Frank Drew, cinerarias, cyclamens and violets by Max Schneider. Lager & Hurrell showed orchids, including *Odontoglossums crispum* and *Cervantesii*, *Dendrobiums splendidissimum* and noble *Rothwellianum*, *Laelio-Cattleya Pallas* and *Oncidium fuscatum*. Julius Roehrs Company showed *Cattleya Schroderae* var. *Surprise* and rose Newport Fairy.

A strong sentiment prevailed to continue special flowers nights through the season and W. A. Manda placed ten dollars in the hands of the treasurer for cash prizes. L. B. DAVIS.

NORTH SHORE HORTICULTURAL SOCIETY.

This society held its regular meeting in Manchester on March 6. Pres. William Till in the chair.

The speaker of the evening was Robert Cameron, of the Botanic Gardens, Cambridge, the subject being "Annuals." Mr. Cameron treated the subject under the following heads: Origin of annuals; Geographical distribution; Improvement by selection of breeding; Usefulness of annuals; Importance of good seed; Cultivation; Popular annuals; Annuals that deserve a greater popularity; Best for cut flower; Varieties suitable for bedding and massing; seashore and mountain varieties; Best kinds for school gardens; Climbing annuals; Biennials.

A vote of thanks was extended to Mr. Cameron for the very able and thorough manner in which he treated this extensive and interesting subject. James Salter was awarded a certificate of merit for a vase of White Antirrhinum

NEW YORK FLORISTS' CLUB.

The monthly meeting on the evening of March 9 was not as fully attended as usual there being less than fifty members present but it was a good and interesting meeting from start to finish. Prof. L. C. Corbett, from the Agricultural Dept., Washington, gave an instructive talk on "The Preparation of Soil for Greenhouse Purposes." The lecture drew out an animated discussion, participated in by Patrick O'Mara, E. V. Hallock, W. B. Du Rie and John Birnie all of whom had been handling soil for "Lo, these many years" and were sure they knew something about the subject with which their earthly career had been so closely linked.

Among the most important transactions of the evening was the practical organization of a bowling team for active service for the coming year and serious business at the Niagara Falls Convention especially next August. President Weathered will deliver a silver cup to the team if it wins at Niagara and President Traendly offers free transportation to a team of five members who in a series of practice games are able to show an average score of 155. Ten aspirants were at once enrolled and the prospects are that there will be something doing in New York before long. All those who wish to join the aggregation may send application to W. E. Marshall, 146 W. 23d St., New York. Dinner committee, outing committee, etc., all made satisfactory reports. Messrs. Young, Bunyard, Traendly, Withers and Totty were constituted transportation committee for convention.

The following exhibits were staged for the inspection of the members. Wm. Eccles, Oyster Bay, carnation Beacon, so good that a cultural certificate was awarded. New Polyantha rose Apple Blossom from Anton Schultheis received a preliminary certificate. Seedling carnation from W. A. Manda, scored 76 points. A. T. Boddington showed *Primula Sieboldii* and *Queen of the Whites* and received the thanks of the club therefor.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The next regular monthly meeting of the club will be held at Horticultural Hall, Boston, on Tuesday evening, March 17, 1908, at 8 o'clock. The lecturer will be Mr. Eber Holmes of Montrose Greenhouses on the important subject of "Indoor Commercial Rose Culture." W. H. Elliott and other prominent rosarians will take part in the discussion. There will be interesting exhibits and a general good time for all who attend.

The annual club banquet will be held at Horticultural Hall on April 1, 1908. There will be a first-class menu served by a well-known caterer, entertainment and dancing. Tickets, \$1.50 each, are obtainable from Peter M. Miller, 22 South Market St., to whom all applications should be made. An attendance of 300 is expected at this banquet, which it is planned to have eclipse all its predecessors.

W. N. CRAIG, Sec'y.

PITTSBURG FLORISTS' AND GARDENERS' CLUB.

The enthusiasm and large attendance which marked the February meeting of the club seemed to carry over to the meeting March 3rd, for from early in the evening there was standing room only. There seems no doubt that the policy of offering prizes, cultural certificates and awards of merit, while appealing to all the members, is of special force with the private gardeners, evidenced among other things by the fact that in the last two months 15 new members have joined, mostly private gardeners. It is worth something to a gardener to be able to show his employer a prize won in open competition at his club meeting. It, so to speak, stamps the man with the approval of experts in his own line, and is likely to call an employer's attention to the fact that he has a good man.

The private gardeners at the February meeting presented a provisional schedule of prizes for exhibition of private gardeners, covering the period from June, '08, to May, '09. This schedule was referred to the March meeting for disposition, and was approved and adopted. It provides for a competitive exhibition of seasonable flowers for each month excepting August.

There was a good display of blooming plants in pots and of cut flowers. An exhibit of tulips by H. L. Blind & Bros. brought out some remarks on Holland bulbs, especially in relation to bulbs of the same size and kind, giving such a density in size of spike. A representative of a Holland grower of bulbs who was present took the ground that the difference was unaccountable; that it was inherent in the bulbs, and on the same principle that children of the same father and mother frequently show such a difference in size.

Awards to Private Gardeners: N. C. Madsen, special mention for *Cineraria radiata*; David Fraser, special mention for *Primula obconica*.

Awards to Commercial Growers: Heiman Heim, first prize for azaleas; H. L. Blind & Bros., second. H. L. Blind & Bros., first for tulips. Herman Heim, first for Baby Rambler roses. Subject for next meeting, "Easter Plants and Flowers."

H. P. JOSLIN, Sec'y.

CHICAGO FLORISTS' CLUB.

The Chicago Florists' Club held a special meeting March 5 at Union Restaurant in place of the regular meeting due March 13th. Mr. Poehlmann, manager of the rose show, spoke on the progress being made by the committee. A change of meeting night and place was discussed and everyone heartily approved of the present innovation. An intermission was had for an hour and refreshments were served.

The dinner scheduled by the Florists' Club of Philadelphia for the 11th inst. has been postponed indefinitely. The reason given is lack of interest among the members.

FLORISTS' CLUB OF WASHINGTON

The monthly meeting of this club was held March 3rd at Gude's Hall. Officers for the ensuing year were elected as follows: F. H. Kramer, president; John Robertson, vice-president; Chas. McCauley, secretary; Wm. F. Gude, treasurer; directors, Peter Bisset, Chas. McCauley, George Shaffer, Wm. F. Gude, John Robertson; awards committee, John Robertson, Chas. McCauley, J. W. Freeman and George Cooke. F. H. Kramer showed a large vase of Queen Beatrice rose, and Peter Bisset a vase of his new seedling rose "G. B." W. P. Craig of Philadelphia showed a vase of Mrs. Jardine. The awards committee will report upon above exhibits at the next meeting.

Another out-of-town guest was Robert R. Jones of Harrisburg, Penn., who represents the Morehead steam-trap, of which he gave an interesting explanation. He also showed several new electric lamps which will soon be put upon the market, and which are said to be a great improvement over the present incandescent light.

A very pleasant feature of the April meeting will be the annual banquet, which is always tendered the new officers. The committee on arrangements consists of Geo. H. Cooke, chairman, Z. D. Blackstone and Geo. Shaffer.

One of the most enjoyable features of the meeting was the address of the retiring president, Peter Bisset, of which the following is an abstract:

"It is now two years since you elected me president of this organization. At that time I promised with your help to see that the club did not go backwards but forward. You, gentlemen, who have watched the work of the club closely and who are familiar with all that has been accomplished will, I am sure agree with me that we have gone forward. Today the awards

of this club are thought as highly of as those of any other society in the universe. This has brought to our exhibitions flowers and plants from many sections all striving for the recognition of this club in its medals or certificates. It rests with you, gentlemen, to see that these awards shall be as hard to secure in the future, as they have been in the past, for, the moment they are cheapened in any way, or awarded to plants or flowers not of high standard, their value will deteriorate.

"During my term as your president the constitution and by-laws have been revised and many new features added, one of the most beneficial to the work of the club being the creation of a board of directors, who have been faithful in their attendance, and I wish now to extend my thanks to these

gentlemen for advice and help in solving the many problems that came before us. Another innovation was the appointment of the committee of awards: the gentlemen who have served on this committee have always acted in a conscientious manner and I cannot pay them a higher compliment than to say I have yet to hear the first word of adverse criticism on the awards made by them.

"At the meeting held on April 3, 1906, the club voted unanimously to extend an invitation to the American Rose Society to hold its convention and exhibition in this city in 1907. This invitation was accepted and we had an exhibition of roses which surprised all who were privileged to see it and was very creditable for this section.

F. H. KRAMER

President-elect Florists' Club of Washington.

This exhibition was followed by a dinner to the delegates and their ladies which fully bore out the reputation of the Washington florists for their good fellowship and generosity. Another wise step taken by the club was in offering a gold and silver medal and two certificates to the best school garden. This created quite an interest and rivalry among the schools and no doubt will benefit the florists of this city a hundred-fold through the love of flowers that those awards helped to develop. I believe the club should award the same number of medals and certificates every year to the schools.

"A series of lectures was also inaugurated and we expected great things from them. It was decided to admit the public to them free of charge. Mr. J. K. M. L. Farquhar of

Boston came and gave a lecture on the flora of Japan which was appreciated by those present. The lectures had to be abandoned, however, as we were not in a position to pay for suitable halls. I hope that at no distant date the club may find a hall free of rent where such lectures can be given to the public free of charge, which I feel sure would be of lasting benefit. I would also suggest that the exhibition of dabbias, roses and carnations that have been held for the past few years be continued. To me personally these exhibitions have been of great benefit, and from what others have told me they also have secured valuable information from them. Abuse of the privilege thus offered can be guarded against by the issuance of admission tickets to all our members for distribution to their friends. The club held a fall show last November, successful in every way but the door receipts.

"Last summer the club enjoyed one of the most delightful affairs in its history. I refer to the outing to the Great Falls of the Potomac; this outing brought together all the florists with their wives and friends from all sections of the District and outlying suburbs. On January 28-30 we had the pleasure of entertaining the American Carnation Society in convention in our city. In connection with the convention there was held at the National Rifles' Hall one of the finest displays of carnations it has ever been my good fortune to see. The club gave the visiting members and their ladies a dinner at Rauscher's on the night of January 30, which was a very pleasant affair and elicited many words of praise from the guests. This concludes the most important events of my term of office as your president.

"The club is at this time better equipped to carry on its work than ever it was; our membership is strong, composed of the men who lead in our business, men that to be associated with is an honor and a pleasure, and there is little danger of the club going down as long as it has the strong support of men who are always ready to give of their means as well as their time and counsel to further the work of the club. I would say to those gentlemen who have always stood by me during the years I have been in office and who have never refused to help whenever requested to do anything for the good of the organization,—Give the gentlemen who will follow me the same help and encouragement that you have given to me, and this club will go on gaining in strength and usefulness.

AMERICAN ROSE SOCIETY

Special Prizes.

The large list of Specials betokens a most creditable interest in the coming Rose Show. August F. Poehlmann, Morton Grove, Ill., is manager, George Asmus, 579 West Madison St., Chicago, Ill., is assistant manager, and will be in charge of exhibits in Art Institute, Michigan Ave. and Adams Street, Chicago, Ill., March 25, 26, 27.

Send an application for entry to T. E. Waters, secretary of the Chicago Florists' Club, 21 E. Randolph street, or file with Benjamin Hammond, secretary of the American Rose Society. A supplementary list is ready for all interested persons. It is urgently desired that all intending exhibitors will let the committee know early what they will send. Last year at Washington exhibitors delayed doing this until the very last day in the afternoon, and the result was that the beautiful show which ensued, was really not known until it was on the ground, and this rush made it hard work to handle.

Division F.—Special Prizes for Cut Blooms, Etc.

F. 145. Fifty Blooms American Beauty Rose. American Rose Society's prizes, \$50, \$25.

F. 146. Display of cut Roses, all varieties. Challenge prize, valued at \$250, offered by Benjamin Dorrance; the winner to hold the prize a year and on relinquishing it to the society for another competition at the end of that period to receive a silver shield suitably engraved as a permanent record of his having held the prize. The names of the winners will be engraved consecutively on the prize.

F. 147. Outdoor Roses in bloom—in pots or tubs. \$200 cash for first prize, by Philip Breitmeyer of Detroit; \$100 cash for second prize, by Arthur T. Boddington, of New York City. Exhibits to consist of 150 plants, not more than five plants of one variety; each to be correctly labeled. All types and classes suitable for out-of-door planting may be included.

F. 148. Vase of one hundred Richmonds, \$50 in gold, offered by E. G. Hill Co., Richmond, Ind.

F. 149. Fifty Blooms of any Rose of American origin now in commerce. Silver cup, value \$25, offered by Alexander Montgomery, Natick, Mass.

F. 150. For the largest and most varied collection of Cut Roses of all classes, one or more blooms in a vase, the variety to count 65 points. Silver cup or \$25 in gold, offered by W. A. Manda, South Orange, N. J.

F. 151. Twenty-five Blooms of La Detroit. Prize of \$25 offered by John Breitmeyer's Sons, Detroit, Mich.

F. 152. The Vase of Roses showing the most artistic arrangement in the exhibition, \$25 offered by Welch Bros., Boston.

F. 153. For the most beautiful exhibit in the hall, a prize of \$20 in gold is offered by Miss M. L. Hammond, Fishkill-on-Hudson, N. Y. Each lady visiting the exhibition the first day to cast a vote on leaving the hall and the exhibit receiving the largest number of votes to receive the prize.

F. 154. One hundred Blooms of Killarney, \$50 offered by Robert Simpson, Clifton, N. J.

F. 155. Fifty Blooms of Liberty, \$25 offered by Adolph Farenwald, Hillside, Pa.

F. 156. Fifty Blooms of Killarney, \$25 offered by Tinglee & Conard Co., West Grove, Pa.

F. 157. Fifty Blooms of Bridesmaid, \$25 offered by Traudly & Schenk, New York.

F. 158. Fifty Blooms of Bride, \$25 offered by Emil Baertner, Park Ridge, Ill.

F. 159. Fifty Blooms of Liberty, \$25 offered by John Davis Co., Chicago.

F. 160. Fifty Blooms of Kaiserin Augusta Victoria, \$25 offered by The Globe Coal Co., Chicago.

F. 161. Fifty Blooms of Golden Gate, \$25 offered by J. A. Bullong, Chicago.

F. 162. Fifty Blooms of Ivory, \$25 offered by J. F. Wilcox, Council Bluffs, Iowa.

F. 163. The best one hundred Blooms of Pink Roses in the show, \$50 offered by Poehlmann Bros. Co., Chicago.

F. 164. Fifty Blooms of Red Roses, Richmond and American Beauties excluded, \$25 offered by Poehlmann Bros. Co., Chicago.

F. 165. One Hundred Blooms of Richmond, \$50 offered by Poehlmann Bros. Co., Chicago.

F. 166. One Hundred Blooms of Kate Moulton, First prize, \$25, offered by Wieter Bros., Chicago. Second prize, \$20, offered by Geo. Reinberg, Chicago.

F. 167. One Hundred Blooms of Uncle John, \$25 offered by Wieter Bros., Chicago.

F. 168. One Hundred Blooms of Mad. A. Chateau. Silver Cup, value \$25, offered by Vaughan's Seed Store, Chicago.

F. 169. Fifty Blooms of American Beauty, \$50 offered by The Mogz Coal Co., Chicago.

F. 170. One Hundred Blooms of Bride, \$25 offered by The Pulverized Manure Co., Chicago.

F. 171. One Hundred Blooms of Sunrise, \$25 offered by The Florists' Review, Chicago.

F. 172. Twenty-five Blooms of Bridesmaid exhibited by growers having less than 50,000 square feet of glass, \$25 offered by Basset & Washburn, Chicago.

F. 173. Twenty-five Blooms of Bride exhibited by growers having less than 50,000 square feet of glass, \$25 offered by Basset & Washburn, Chicago.

F. 174. One Hundred Blooms of Mrs. Porter Palmer, \$50 offered by S. Freeman & Sons, Chicago.

F. 175. The best new Rose not in commerce and never exhibited before the American Rose Society, vase to contain not less than twelve and not more than twenty-five Blooms. Silver Cup, value \$25, offered by F. R. Pierson, Tarrytown, N. Y.

F. 176. Fifty Blooms of American Beauty, Cyclopedic of American Horticulture by Prof. L. H. Bailey, value \$30, offered by The American Florist Co., Chicago.

F. 177. Best Twenty-five Blooms of Pink Roses not disseminated prior to 1908. Silver Cup, value \$15, offered by J. R. Denard Co., Chicago.

F. 178. Twenty-five Blooms of Bridesmaid, \$10 offered by W. W. Barnard Co., Chicago.

F. 179. Twenty-five Blooms of Richmond, \$10 offered by Geo. Keller & Son, Chicago.

F. 180. Twenty-five Blooms of Sunrise, \$10 offered by Leonard Kill, Chicago.

F. 181. Twenty-five Blooms of Uncle John, \$10 offered by I. R. Newbold, New York.

F. 182. Twenty-five Blooms of Killarney, \$10 offered by Kroeschell Bros. Co., Chicago.

F. 183. Twenty-five Blooms of Bride, \$10 offered by A. Dietsch Co., Chicago.

F. 184. Fifty Blooms of Mad. A. Chateau, \$10 offered by Welland & Olmger, New Castle, Ind.

F. 185. Fifty Blooms of American Beauty, Two tons of Florist Bone offered by Darling & Co., Chicago.

F. 186. Twelve named Varieties of Hybrid Perpetuals in pots, \$10 offered by Kroeschell Bros. Co., Chicago.

F. 187. Twenty-five Blooms of Killarney, \$10 offered by Holten & Hunkel, Milwaukee, Wis.

F. 188. Exhibit of cut Roses, four varieties, Twelve Blooms of each variety, open to Private Gardeners only, \$25 offered by Harry O. May, Summit, N. J.

F. 189. Two Hundred Lily of the Valley, First prize \$10, offered by H. N. Bunn, Chicago. Second prize \$8, offered by Poehlmann Bros. Co., Chicago.

F. 190. Vase of One Hundred American Beauties, Silver Cup, valued at \$10, offered by Crane & Co., Chicago, Ill.

F. 191. Best Fifty Blooms of new Rose never before exhibited for competition, Silver Loving Cup, valued at \$20, offered by Holter Bros., New Castle, Ill.

A. L. Randall Co., 21 E. Randolph street, will receive and take care of any flowers sent for exhibition.

BENJAMIN HAMMOND,

Secretary.

Fishkill-on-Hudson, N. Y.

WORCESTER COUNTY HORTICULTURAL SOCIETY.

At the last lecture of the season on March 5, Philip W. Ayres gave an illustrated talk on Forestry which was thoroughly enjoyed by a large audience. The exhibition of flowers and plants was large and of excellent quality. H. F. A. Lange, E. W. Breed and M. J. Whittall had some handsome azaleas. Roses and carnations were shown by Messrs. Lange and Midgley. George McWilliam had some fine orchids. There were cinerarias, primulas, cyclamens, hyacinths, etc., mainly from the above named growers.

The "Heart of the Commonwealth" throbbled with rural happiness on the occasion of the annual banquet and reunion of the Worcester County Society on the evening of March 11. It was held in the banquet hall of Horticultural Hall and there must have been nearly four hundred ladies and gentlemen in attendance. The banquet hall was not large enough to accommodate all the guests, and tables were set in adjoining rooms and one in the main hall.

From 6 to 6.30 the guests were received informally by President George Calvin Rice, Secretary Adin A. Hixon, Treasurer Charles S. Bacon, A. H. Lange, George McWilliam, Leonard C. Midgley, Henry B. Watts, Charles Greenwood, Arthur E. Hartshorn, William J. Wheeler, Simon E. Fisher, H. R. Kinney, H. A. Cooke, E. W. Breed, Charles W. Wood, J. Lewis Ellsworth, Arthur J. Marble, A. N. Powell, W. K. Stanley, E. A. Bartlett, A. A. Bellows, F. H. Hammond, H. E. Kinney, M. F. Converse, George B. Rich, Allyn W. Hixon and George W. Hixcox.

The tables were decorated with plants and cut flowers furnished by Edward W. Breed, A. H. Lange, Leonard C. Midgley and Adin A. Hixon.

There was a new toastmaster this year, John B. Bowker. The after-dinner program, arranged by him and Secretary Hixon, was one of the most enjoyable in the history of the society. For the first time musical numbers were mixed in with the speeches. Each speaker was introduced with appropriate and witty remarks. Mr. Bowker spared nobody, and, consequently, none of the speakers spared him.

President Rice said, in part: "The committee on winter meetings, lectures and discussion closes its duties with tonight's entertainment, and I wish to thank it for the conduct of those meetings, that some one or more have been present at each meeting to welcome all, also those who took part in the subject of the day. Your committee introduced a new feature—that of music at several meetings—which gave universal satisfaction, and I wish to thank those who took part most heartily."

"The program for tonight includes speaking and vocal music, introduced by the toastmaster, and at 9.15 o'clock we adjourn to the lower hall, where all are invited and expected to join the dance—A. J. Marble, floor director."

The speeches that followed were witty and full of entertainment.

Among those who spoke of their work, and told entertaining stories were, C. S. Gold, president of the Connecticut Pomological Society; I. L.

Harvey, vice-president of the New Hampshire Horticultural Society; J. W. Clark, the new president of the Massachusetts Fruit Growers' Association; Prof. F. C. Sears of the Massachusetts Agricultural College; Edwin H. Burlingame, secretary of the Rhode Island Horticultural Society; Dr. Geo. M. Twitchell of Augusta, Me.; A. Warren Patch of Boston, and Joseph K. Greene. The Midgley Quartet, composed of Leonard C. Midgley, Mrs. Harry Hildreth, and Mr. and Mrs. Percy G. Forbes, sang selections, while Mr. Forbes and Mr. Midgley sang two duets. The exercises closed with a selection by the quartet.

The guests adjourned to the main hall, where the Light Infantry Orchestra played for dancing until 12 o'clock.

SPRING FLOWER SHOW.

The annual spring flower show of the Massachusetts Horticultural Society will be held at Horticultural Hall, Boston, Friday to Monday, March 20 to 23.

The displays of spring bulbous plants, including tulips, narcissi, hyacinths, and lilies, at this exhibition will exceed in magnitude and brilliancy any previous efforts of the Society.

Other notable features will be the collections of Easter flowering plants, herbaceous spiraeas, acacias, azaleas, ericas, and orchids from private estates in the vicinity of Boston, while many commercial floriculturists of this and other States will contribute the best products of their greenhouses.

Roses, carnations, and violets will be largely represented and the schedule calls also for collections of winter apples and vegetables.

In response to an often expressed desire by visitors to the Society's exhibitions and to increase their educational value a professional expert gardener will be in constant attendance to answer questions and to furnish information concerning the exhibits.

There will be music by a ladies' orchestra of eight musicians every afternoon and evening from 3 to 5 and from 7.30 to 9.30.

The exhibition will open Friday, March 20, at 12 o'clock, continuing until Monday, March 23, from 10 a. m. to 10 p. m.

WM. P. RICH, Secretary.

BUFFALO FLORISTS' CLUB.

On the evening of Friday, March 6th, the Buffalo Florists' Club held their annual banquet, smoker and election of officers. Not only in numbers, but in every other respect, the meeting and banquet were the most successful in years.

After the installation of officers and the regular routine of business had been transacted, the members enjoyed the smoker immensely; there was something doing every minute. All features of the entertainment were excellent, and the committee is to be congratulated on securing such talent as was had.

Louis Neubeck, acting as toastmaster, was of rare worth and held the attention of the members throughout. The first speaker of the evening was William Legg, the Club's past secretary, whose remarks were interesting and to the point. Among the other

members who were heard from were William Scott, William F. Kasting, Charles Keitsch and others.

E. C. B.

SOME TOLEDO FLORISTS.

The Florists' Club visited last Sunday afternoon the establishments of C. Kaminski, John Gratopp, Harry Hehl and Chas. Koelker & Sons. Kaminski has two houses and caters to the retail trade. Gratopp's range, which is quite extensive, is planted mostly in carnations, which are in solid benches, fringed by parsley, mainly for the looks of it, for parsley does not pay this year. A large house, 4x100, erected late last fall, is intended for roses, but at the present time contains lettuce. At Hehl's houses, about the largest place in town, the cut of roses and carnations has been very satisfactory. Mr. Hehl is a strong believer in pot-grown carnations. He grows also a large amount of bedding plants, which are sold every year at planting season for 5c. each, no pots and no delivery. Chas. Koelker & Sons' place is taken care of by his two boys. Roses and carnations are the main crop besides bedding plants, etc., as used in every retail store.

SOUTHAMPTON HORTICULTURAL SOCIETY.

The bi-monthly meeting of this society was held March 5th. President Clark in the chair. After the election of members and other routine business J. Griffin read a very interesting paper on Vegetable Growing, which was followed by a profitable discussion. It was decided to hold a banquet after our next meeting, Thursday, March 19th.

U. G. AGER.

AN ASTER GROWING CONTEST.

Entry to Altimo Culture Co.'s \$250.00 Prize Aster Growing Contest is **Free to All**.

We desire to inform those who have received our Aster Book, that the condition requiring competitors to purchase some part of their seed from us is **no longer required**. We will send a card for entry **Free**—whether you buy seed from us or not—Similar varieties to those grown from "Altimo" Brand Seed will be considered in competition for the regular prizes; and any variety superior to "Altimo" Brand Varieties will be considered in competition for the special prize.

If you have good seed of fine varieties you stand in a good way to win provided you are a good grower. If your varieties are **run out** then you better get some first class seed from us. At any rate, we leave this to you, but **we want you to compete** for the prizes.

We want a lot of competitors for our prizes; a big contest, that the prizes will really go to the **best Aster Growers in America**. This can only be provided the best Aster Growers compete for the prizes. Some of the best have already approved our plan and express enthusiasm over it and we appreciate the same, but we want to hear from **every Aster Grower in America**, so write for competition card today.

Yours for success,
ALTIMO CULTURE CO.,
Canfield, Ohio.

Obituary

Henry F. Rauss.

Henry F. Rauss, of Detroit, Mich., died on February 26, aged 49. He was connected with the greenhouses at Belle Isle previous to his long illness. A widow and children survive him.

Austin Craig Apgar.

Prof. Austin Craig Apgar, a prominent botanist, died at his home in Trenton, N. J., on March 5. He was an extensive contributor to periodicals and the author of several books on trees.

Robert B. Leuchars.

Robert B. Leuchars, a well-known writer on subjects horticultural and floricultural, died in Brookline, Mass., aged 85. He retired from active business as a landscape gardener some twenty-five years ago.

William Sabin.

William Sabin, of Bridgeport, Pa., died on February 26, aged 72. He was born in Staffordshire, England, but since 1888 had been in this country, first as florist, and later as sexton of the Bridgeport cemetery.

Allen Dodge.

Allen Dodge, the oldest employe of the Department of Agriculture in Washington, died at his home in that city March 6 at the age of eighty-five years. He was a native of the District of Columbia and had been a pomologist in the department for twenty-seven years.

Frank Cummings, Sr.

Frank Cummings, Sr., died in Meridian, Miss., on February 23, at the age of 83. Mr. Cummings was at the head of the Frank Cummings Bulb & Plant Co., having conducted this business for seven years. A son and two grandsons now comprise the firm, and they will retain the title as it now stands.

Prof. Kellerman.

Word has been received from the American minister at Guatemala City of the death last Sunday of malarial fever of Professor Kellerman, head of the botanical department at the Ohio State University, who was studying the flora there. He was 50 years old and a graduate of Cornell University.

John E. Mitchell.

John E. Mitchell, who for many years has conducted extensive greenhouses in Beverly, Mass., passed away on March 3, at the age of 71. Mr. Mitchell was born in Huntley, Scotland; was of quiet, modest manner, unostentatious in his charities, and will be greatly missed. A widow, a daughter and a son who have been associated with him in the business, survive him.

THE PRIVATE GARDENER.

Address by Robert Craig before the Massachusetts Horticultural Society, February 29, 1908.

I use the term "Private Gardener" because it is one in common use and well understood to distinguish one who has charge of a garden or grounds and cultivates vegetables, plants and flowers, not to sell, but for the use of those who employ him to do this work. The gardener assists and directs nature in producing everything which grows out of the ground for man's use; for the gratification of his palate, and which is capable of administering to his sense of beauty. His work is to provide not only food for the body but also "Food for the Soul." We sometimes see an advertisement in the daily papers like this—"Wanted, a gardener who understands care of horses," or "who can milk." Such an advertisement is a sad abuse of the word; what is wanted is a handy laborer, or man of all work; much that I shall say today cannot specially be applied to him.

The Private Gardener's Part in the Future of Horticulture.

I know that my audience includes many that are not gardeners, but I feel that they, in their interest in the subject, will pardon me if the greater part of my remarks are directed specially to gardeners. I choose the subject because I conceive that it is one of more importance than is generally assigned to it and that the private gardener is likely to play a part of continually growing importance in American life. His influence on the future of Horticulture is powerful for good or for evil. If he be a capable, energetic and honest man, he will do such work as will make his employer a patron of gardening, and if he be ignorant, careless and dishonest he will not only ruin himself, but will damage the cause he misrepresents. Allow me to recite a couple of instances occurring in my own neighborhood which illustrate this point:—

I was well acquainted with a wealthy gentleman who built new greenhouses and started to improve the grounds surrounding his fine mansion. He was fortunate in securing a fine English gardener, newly arrived in this country; his place rapidly improved under the new gardener's care and after two years' work, when the owner saw he was getting good results, he became greatly interested, and invested freely large sums to carry on the improvements and enrich the grounds with plantings of rare and beautiful trees and shrubs; he built additional greenhouses, bought many plants, and also a fine collection of orchids. Everything prospered and was a source of great pleasure to the owner and his friends, when suddenly the good gardener was stricken with an incurable disease and had to give up work. The place was then put in charge of his first assistant, a young man about 26 years old who was given a fine opportunity to make a name for himself, but he could not stand, even a little prosperity; took to drinking and playing the races, and during a spree in which he did not put in an appearance for two days, an accident to the boilers resulted in the entire stock of plants being frozen to death. The owner, who had plenty of

money to spend in gratifying his tastes, lost all interest in gardening and became a liberal patron of other fine arts. His collection of paintings and examples of fine sculpture are known far and wide, but the greenhouses are empty, the garden neglected, and it is not likely the owner's interest in these will ever be revived.

Faithfulness Is Rewarded.

Another instance coming under my immediate observation interested me still more:—One of the wealthiest men in the neighborhood of Philadelphia, retiring from active business, built one of the finest mansions in the State, employed the highest talent in landscape gardening and with a large force of men, in a couple of years had the new place greatly improved. He employed a young German gardener who had previously at a salary of only \$60 per month made a good name for himself; gave him entire charge and he worked with such intelligence, industry and honesty, that the employer built for him additional ranges of glass about two years ago at a cost of fifty thousand dollars, and allows him to spend annually a large sum in improving the place. Only last summer he took a trip to Europe at his employer's expense with power to purchase such rare plants as he might select. His salary is now quite satisfactory to him. Oh! but you say, this was a rare case; perhaps it was, but I am sure at the rate wealth is increasing in this country the number of such places will steadily increase. I like to quote Lord Bacon on this point:—"When ages grow to civility and elegance men come to build stately, sooner than to garden finely, as if gardening were the greater perfection."

Boston Gardeners' Good Record.

Before proceeding further it may be well for us to consider that we are in Boston; Boston a city rich in horticultural history, has always been foremost in encouragement of advanced gardening. Here in 1829 the Massachusetts Horticultural Society was incorporated "For the purpose of encouraging and improving the science and practice of Horticulture." Ever since, and before that time, Boston has been the foremost American city in Horticulture. In 1822 the first gardening periodical, The New England Farmer and Horticultural Journal was founded; followed by Hovey's American Garden and Barretts' Horticultural Register in 1835; the first greenhouse in the country, history says, was built in Boston by Andrew Faneuel about the beginning of the 18th Century. And today in the excellence of its parks and private gardens, in proportion to its population it is easily in the front. Those who love gardening in any branch, find in Boston a congenial atmosphere; Boston has been the home and scene of the life work of many famous gardeners. I look upon Jackson Dawson as the best all around propagator and plantsman that America has known, and the late Fred. L. Harris, for nearly half a century at Hunnewell's famous place at Wellesley, was a model for private gardeners to imitate.

Preparing Himself for His Life Work.

The problem of how a gardener should set about preparing him-

self for his life work is, in this country, a serious one. In the older countries of Europe, opportunities to acquire a thorough knowledge of all departments are plentiful. There are so many estates on which the grounds are admirably planned and planted, and where there are numerous houses adapted for propagating and growing everything for the garden; cold pits and cold houses; intermediate houses and "stove" houses, with graperies, fruit houses and hot beds, so that a man may get a thorough knowledge of gardening in all branches; and there are many commercial places which carry on all lines and where boys may go and learn the business as they grow to manhood. There are only a very few such commercial places in America. In this country almost all the trade establishments cultivate specialties as roses, carnations or palms. Nearly all of our good all around gardeners get their training abroad, and it is well for any young man who can get a chance to learn gardening under such a man, either on a large private place or in a park, some of which in the larger cities I am glad to say, have now large ranges of glass and grow everything but vegetables, which is a very important branch and of which I may have a few words to say later. Some of our colleges have now facilities for teaching gardening. I wish that all of the colleges would follow the example of Cornell, where they have six greenhouses in which students may gain a practical knowledge of plant growth, learn how to prepare soil and manure, and have opportunity to gain a general knowledge of advanced gardening. Many of the colleges have now a course in forestry, and I understand that young men getting diplomas, if otherwise fitted, can readily procure employment at fair salaries. It seems to me that the time is now ripe for all the leading colleges to build ranges of glass and have courses in practical Horticulture. Graduates from these classes, and otherwise desirable, would have an advantage over uneducated men in securing the best positions. The recent establishment of classes in landscape gardening by the Gardeners' and Florists' Club of Boston, is of great advantage to those near enough to take advantage, and is an example for all similar institutions everywhere to imitate.

Some Good Books.

To the gardener who wants to improve himself, books are a paramount necessity. The recorded wisdom of the ages is at your services here. Nicholson's Dictionary of Gardening and Bailey's Cyclopaedia of American Horticulture should be in the possession of every gardener; they describe nearly every plant in cultivation and their cultural notes are of very great value. I will not attempt naming all the good books but cannot refrain from mentioning Jenkin's Art of Propagation and Improvement of Cultivated Plants; Professor Taft's Greenhouse Construction; Hunt's How to Grow Cut Flowers; Henderson's Practical Floriculture; Falconer's Mushroom and How to Grow Them; Elwanger and Reynold's Gardening for Profit; Mrs. Van Rensselaer's Art Out of Doors; The Principles of the Har-

CHOICE SINGLE FLOWERING ENGLISH WALL-FLOWER FOR EASTER BLOOMING

We have an elegant lot of these old-fashioned favorites, field-grown plants, which were potted up into four-inch pots during the latter part of September and which have been carried through the winter in cold frames and are now in prime condition to move. If placed in a carnation house temperature they will come in nicely for Easter, at which time there will be ready sale, at remunerative prices.

Strong, bushy, shapely plants from four-inch pots, \$1.25 per dozen; \$8.00 per 100; \$70.00 per 1000.

HENRY A. DREER, 714 Chestnut St., Philadelphia, Pa.

mony and Contrast of Colors by M. R. Chevreul; Herrington and Smith on *Chrysanthemums*.

Cultivate a love for books; it is a habit that grows by indulgence; as the fondness for books grows you can add to your library; all the larger seed houses now carry the best of the horticultural books which you are privileged to look over and select according to your needs or taste. Subscribe for one or more of the trade papers and get your names on the lists of the Agricultural Stations so as to get up-to-date information; the results of the latest experiments along all lines. The seedsmen's catalogues are great educational factors; I know of no greater improvement horticulturally than in the character and contents of these valuable publications. A gardener should study natural landscapes so as to readily apprehend their points of beauty and their beauty as a whole, and then with "The art that doth mend nature" put the finishing touches thereto.

Have a Hobby.

Every garden may be made more interesting by excelling in some specialty; every gardener should have a hobby. If the place be a small one and your opportunity meagre, take in the flower line, pansies, verbenas or Phlox Drummondii or the herbaceous phlox and in the greenhouse plants either cyclamen, cineraria, primula, etc. By saving your own seed, carefully selecting, year after year, the finest, it is astonishing how you can improve the varieties in any species. Like results follow a similar course in vegetables. Buy, for instance, the finest varieties of corn and select from these for seed the ears that contain the greatest average of good points, as flavor, size and good appearance and you are likely to get corn better than you can buy. Or if your place and opportunity are greater start for instance making a collection of conifers; in groups or in single specimens; or a collection of rhododendrons or lilacs, of which there are now so many fine kinds; or roses, or paeonies, or similar plants in the hardy garden. You will find in a few years your constant and careful pursuit of your hobby will

result in making you and the place you represent, more or less famous, and your application to work along a special line will enable you to give valuable points to your fellows. As Emerson says "If you make shoes better than anyone else you will find a path beaten to your cottage door."

Raising New Varieties.

It is profoundly interesting to study how new varieties come. Nature works, often we know not how, in bringing forth new varieties, the influence of heredity undoubtedly prevails to some extent and instances are not wanting to show that it does. Let me give you just one in my own experience,—three years ago we made a number of crosses in carnations using the variety Harlowarden as one of the parents; you will recollect that this sort had a very long, very desirable stem and we noticed that about one-fifth of these seedlings had this Harlowarden stem, but there were characteristics developed in a number of seedlings which had no visible connection with either of the parents. Sometimes however the influence of both parents can be distinctly traced. Time will allow me to mention only one or two instances:—Many of you will recollect the introduction of the "Daybreak" carnation, a charming variety which had not many stems, but these were long and stiff and every shoot produced a flower. About the same time was introduced "Tidal Wave" which produced many stems but lacking in length; the crossing of these two varieties produced the famous "Lawson" which inherited the good points of both varieties. Among the seedlings with Lawson blood has been found Enchantress which I think has more good qualities than any other variety and following along this line has resulted in producing a free blooming vigorous type which has made Mr. Fisher famous. The results of Mr. Walsh's work in roses of the Wichuraiana type are little short of marvellous; the man who does such things is a public benefactor. But, while man can do something in breeding from types, nature is always at work and often produces, we know not how, valuable "breaks" in seedlings or

sports, which are frequently lost because the gardener fails to recognize their merits and propagate and perpetuate them. Private gardeners have done much in the past to preserve and propagate good new things and should be ever on the alert to take advantage of any opportunities along this line which kind nature may afford. The famous Seckel pear was a "chance" seedling found growing along the roadside and man had no hand in its origin, but some one should receive the blessings of generations for preserving and propagating it.

Forcing Vegetables.

One of the main branches of work for the private gardener is the growing of vegetables. Our enterprising seedsmen are continually introducing new varieties and a large percentage of these novelties have merit and occasionally there is a great advance over previous varieties. Be ever on the alert for the good new things.

There should be an abundance of vegetables for spring, summer and fall and where the facilities exist, in the winter also. George Elliott says: "No man can be wise on an empty stomach" and Ben Jonson that "A good dinner lubricates business." No dinner is complete without fresh vegetables and many of the very finest, most luscious and delicately flavored cannot be purchased in the markets, because they do not pay to grow commercially. If you can furnish your employer a regular supply of these dainties, you will find yourself in close touch with him and he is likely to help you in any of your plans. Vegetables grown under glass are superior to those grown out-doors, in tenderness, crispness and fine flavor and every large garden should have special houses or ranges of houses for this purpose; these need not be expensive structures and may be in any out-of-the-way place so as not to interfere with the architectural effect of the plant structures; connected with these vegetable houses there could be other inexpensive houses where seedlings could be started, dormant plants kept and much of the repotting and unsightly work done, thus giving opportunity to keep the show houses more attractive.

Notice to Florists

THE FRUIT AUCTION COMPANY, New York City, beginning at an early date this Spring, will inaugurate daily auction sales at wholesale of plants, etc. Exceptional facilities provided in our new building, centrally located at 200, 202 and 204 Franklin Street (corner Washington Street).

Date of initial sale will be announced in next issue of this paper.

For terms and all other detailed information, address:—

THE FRUIT AUCTION CO.,

P. O. Box 640 - - NEW YORK CITY

Correspondence and personal interviews cordially invited. *Payments will be made to sellers of plants the day following sale.* The movement to sell plants by auction at wholesale has the support and commendation of leading growers and importers.

Importance of Industry.

Now, a few words on the importance of industry. From the very earliest times, the great men have extolled the value of industry. "Go to the ant thou sluggard, consider her ways, and be wise" has served for the text of many a powerful sermon; the expression that "Genius in only an infinite capacity for work" has been endorsed by many thinkers. Napoleon said "I have never found the limit of my capacity for work." In short, the men who have made their mark in the world have been at a loss for words to express themselves strongly enough on the subject. Don't be afraid of work and don't forget that "Folks who never do more than they are paid for, never get paid for more than they do." Let not the amount of pay be your main consideration; rather see how much and how well you can do the work; the real reward that life holds out for work is the increased capacity to do more and better work, and consequently greater satisfaction and enjoyment. The man who wants an indolent life is not fitted for a gardener. Many good men fail to do their best for want of courage and faith in themselves, and from lack of energy and ambition; there are not so many failures from want of capacity. Herrick says:—"The great man is not so great as folks think, nor the stupid man so stupid as he seems."

The late Peter Henderson, a great gardener, close observer and successful business man often said that he did not think there was so much difference in the mental capacity of men as in their courage, ambition and industry.

Have faith in yourselves and loyalty to your employer. I am fond of the saying of Fra Elbertus "If pnt to the point, an ounce of loyalty is worth a pound of cleverness." Don't be afraid to undertake all the time bigger things; your ability will grow in your earnest attempts to accomplish; and, don't be afraid of manual labor if occasion require; it will not lessen, but increase your mental power; a stiffening and strengthening of the spinal column begets no weakness of the mind; "A sound mind in a sound body." The immortal Lincoln split rails, and it was only recreation for Gladstone to cut down immense trees with an axe. The advantage of outdoor exercise is recognized everywhere. The orator in the English Parliament exclaimed "the Battlefields of England were won on the cricket fields of Eton;" there was as much force in the rejoinder of the Irish Member, "They were won on the bogs of Ireland."

Better Greenhouses.

One of the most encouraging points in gardening is the improvement in greenhouse architecture since the days of small glass and heating by brick flues. Many of the more ambitious structures of early date were failures for practical purposes; architecturally effective, they were frequently poorly heated and otherwise defective from a cultural standpoint; thanks to frequent consultations in recent years between architects and advanced gardeners, the more modern houses have gained in appearance and are almost perfect in producing results.

The problem of compensation for gardeners is an interesting one; most gardeners think it is a poorly paid work and perhaps it is, considering how much has to be learned. I think, however, the money reward rests largely with the individual; there can be nothing like a uniform scale of wages. I had, for instance, paid my foreman about twelve hundred dollars a year, but I must say that one to whom I paid two thousand dollars per annum was the most profitable one to me. I think, on the whole, the outlook for first-class gardeners is good. Never in the history of nations has wealth increased so fast as in the United States during the past quarter of a century, and a majority of the wealthy men will, in the future, I venture to say, find their highest pleasure in developing their gardens and country estates.

On the fine old estates in England, France and Germany, no one is more respected, nor in closer, kindlier touch with the owner than the head gardener. As fast as men fit themselves in character, deportment and ability, this is coming to pass here; but, admitting that salaries might in some cases be justly increased, we must not forget that gardening has many advantages for those who are fond of it: it is the most healthful of all occupations; it is one of the fine arts. Ruskin has defined Fine Art as any in which the head, hand and heart work together. I cannot see why the gardener cannot take as much pleasure as the owner. "He who admires is the real possessor." "There is no ancient gentlemen, but gardeners."

Recent Genuine Novelties in

SWEET PEAS

The following are our recent introductions in the **Giant Flowered Wavy Standard Varieties**. These have all been sent out well fixed in character, and can easily be kept so:—

GLADYS UNWIN—Lovely pale pink. A great market favorite.

NORA UNWIN—The purest and finest giant flowered white.

PHYLLIS UNWIN—A deep rosy carmine self, and sunproof.

A. J. COOK—Best described as a giant flowered Mrs. Walter Wright.

FRANK DOLBY—Lovely pale blue, a giant flowered Lady Grisel Hamilton.

MRS. ALFRED WATKINS—A lovely delicate pale pink with pale salmon shading.

E. J. CASTLE—Rich carmine with salmon shading. The finest of all for artificial light.

These are all the Giant Flowered Offsprings of "Gladys Unwin."

ALSO **EVELYN BYATT**—Rich flame color. The first of this rich color.

To be had from all Seedsmen and Nurserymen throughout the United Kingdom, America and the Colonies.

CARNATION EXHIBITION AT CORNELL.

The Horticultural Department of Cornell University held its fourth annual carnation exhibit on March 4th-6th. The exhibit was in charge of the students in floriculture, who managed, staged and judged the blooms. The exhibition was purely for educational purposes and no prizes were offered. However, many growers took advantage of the opportunity to place their stock before interested students.

The exhibition was well advertised about the city and many visitors were present during the three days. After the exhibition the blooms were put to good use by the students, in packing demonstrations, design making, etc. At the weekly meeting of the Horticultural Club (Lazy Club), carnations was the subject of discussion. An interesting talk on carnation breeding was given by Dr. Weber, and the varieties from a commercial point of view were discussed by L. D. Batchelor.

Among the exhibitors were C. W. Ward, whose two winners at the Washington show, Mrs. C. W. Ward and Alma Ward, caused a great deal of comment and expressions of admiration from the visitors. His President and Beacon also showed excellent growing. R. Witterstaetter exhibited Afterglow; Chicago Carnation Company, Andrew Carnegie; F. R. Pierson Co.,—Variegated Lawson, Enchantress, Winsor, Beacon, and Red Lawson; the Horticultural Department of New Hampshire College.—an interesting lot

of seedlings with their pedigree attached; John E. Haines,—Pink Imperial, Variegated Imperial, John E. Haines, White Perfection, and Light Pink Seedling No. 102; Paul Thomson, the yellow variety Neptune; James D. Cockcroft,—Harvard; Frank H. Kimberley,—Enchantress and White Enchantress, also the violet Mary Louise; Horticultural Department of Cornell,—Harlowarden and Mrs. Thos. W. Lawson.

FIRE RECORD.

Weaver & Miller, McAlister, Okla., lost about \$4,000 in a fire which destroyed their potting shed and boiler room on February 22.

John Hass, Thomaston, Conn., who had recently enlarged his plant and put in a new heating system, lost his entire stock on March 3 through an overheated furnace.

The gardener's cottage and a large poultry house on the estate of William E. Walker, at Manchester-by-the-Sea, Mass., were destroyed by fire on March 10, causing a loss estimated at about \$7000. The blaze started from an overheated oil lamp in the brooder.

The office and heating plant of the Norwood Floral Co., Pawtuxet avenue, Norwood, R. I., were completely destroyed by fire on March 3. Loss on building is about \$1,000; the loss on stock is not estimated. Two houses that were saved were left without heating apparatus.

March 4, one of the large barns belonging to the Park Board of Minne-

apolis went up in flames. Inventory values of contents was \$16,500; barn was valued at \$10,000; insurance on barn, \$6,750; and on contents, \$9,750. Among the largest loss was 150 row-boats, one gasoline launch, seven street sprinklers, all the gymnasium and play apparatus for the different parks and 40 tons of hay. No damage was done to the greenhouses nor to the other large barn, which contains the machine and carpenter shops, tool storage room and stables.

PUBLICATIONS RECEIVED.

Twenty-fifth Annual Report of the Board of Park Commissioners, Minneapolis, Minn. This report is a work of art in itself. The typographical work, views and maps are very fine, and the autograph of Theodore Wirth on the various beautiful landscape diagrams and plans is a sufficient guarantee of their high quality. Minneapolis is liberal with her appropriations for park acquisition and maintenance, and this volume shows how well she is getting her money's worth.

Seed Trade

Retail seedsmen report peas as moving slowly thus far this season, and attribute this to the unsatisfactory prices received for this crop last season, and to the difficulty of getting them picked after the crop was grown. This latter complaint has become chronic, but unless there is a change in business conditions before the gardening season opens this spring this matter should no longer disturb the farmers' dreams.

While peas have moved slowly, there has been an active demand for beans, particularly of the green pod varieties, and more especially the Black Valentines. Without attracting attention this variety has disappeared from the market, and now can scarcely be bought at any price. Not only have the present supplies of these beans become exhausted, but stock seed is so scarce that growers are unable to accept orders tendered them for the 1908 crop. Of course the practical impossibility of securing this variety for this season's planting, will compel truckers to turn to others, such as the Red Valentine, Refugee and the Stringless Green Pods, and unless the fever for seed beans speedily subsides, reserves of the varieties named will be reduced to very small proportions when planting time is over. But what of another year? Perhaps it is well not to cross that bridge until we reach it.

Excepting counter trade which is not quite equal to last year—due entirely to the weather—seedsmen report business as excellent. Of course there are a few exceptions, as always to all rules, but, in general, seed business is good and this applies particularly to the mail order houses. A few days of warm weather will start counter trade into life, and the retail dealers will have their innings.

P. K. Nott, late with Josiah Young, of Troy, N. Y., is now with Peter Henderson & Co.

C. S. Stewart has taken a position with the National Seed Co., 117 Fifth Ave., Chicago.

C. Peterson & Sons, Escanaba, Mich., will add flower and vegetable seeds to their florist business.

Visitors in Philadelphia: Carl C. Cropp, Chicago; Chas. R. Kimberlin, Santa Clara, Cal.; W. C. Langbridge, Cambridge, N. Y.

James H. Cheyne who has been in the employ of Schlegel & Fottler Co., Boston, for some time, is leaving to take a position with E. L. Beard in landscape work.

Onion seed of the 1908 crop is offered at strong prices by the California growers. Reds at around \$1.25, White Portugal at \$1.25, yellows at around \$1.00 and White Globe at \$1.50 to \$1.75.

Joseph Bradley, for twenty years with Johnson & Stokes, and, since the dissolution of that firm, with the Johnson Seed Co., has resigned his

position, and is now with Henry F. Michell Co.

Wm. Elliott & Sons are to move about May 1st to Vesey street. This move is made necessary by the practical doubling of their rent. There has been an increase in rentals of from 50 to 100 per cent. in the vicinity of the tunnel stations in New York.

Mr. Charles Kimberlin, of Santa Clara, Cal., expects to finish his business in the east this week and leave for home. He seems to be the "last of the Mohicans." It is reported that Lester H. Morse will not send a representative east this season.

The counter trade in Toledo, O., has been very slow so far. All are up against the passage of a new State bill to have clover and grass seeds 98 per cent. pure, introduced by a man who thinks he knows it all, and as this city is the principal market for clover seed, Toledo dealers are hit more than seedsmen elsewhere.

WHOLESALE SEEDSMEN'S LEAGUE.

A special meeting of the Directors of the League, F. W. Bruggerhof presiding, was held 18th February, at which meeting there was passed the following resolutions:

"Recognizing the fact that the Seed Trade of America should have an established custom similar to that adopted by their kindred association, (The S. A. F.) we, the Board of Directors of The Wholesale Seedsmen's League, at a meeting held in New York, February 18, 1908, unanimously adopt the following motions:

"Resolved, That as the business of growing, selling and distributing seeds has become such an important pursuit, it now seems absolutely necessary that those of us having the interests of the business at heart should recommend our fellow seedsmen to respect the energies and progressive methods of each other; and it is further

"Resolved, That the originator, discoverer, or introducer of a new variety of seed, grain or plant has the sole right of naming said variety, and that this name should be the one under which this variety is to be known in the trade thereafter, and the name not altered except that it may be ordinal or firm, when used as a prefix or changed in any way until it is absolutely demonstrated by continued selection the variety has been so improved or changed as to warrant its being given a new name.

"Resolved, That where a Seedsmen spends time and money in search of new and distinct varieties of seeds, that it is

his right to name any variety he may discover which has merit and which has not heretofore been catalogued or offered by the American Seed Trade.

"Resolved, That we, the Board of Directors of The Wholesale Seedsmen's League, hereby express our strong disapproval of the practice that has occasionally obtained with some dealers of offering under new names such varieties of seeds, or plants, which should be known only under the names given to them by their introducers; which original names may be fairly considered as trademarks, and the property of the originator or introducer.

"Resolved, That we hereby pledge the influence and the support of The Wholesale Seedsmen's League to the end that, when introducers of newly discovered or improved varieties of seeds shall have disseminated the same under special names, they should be protected against unwarranted and unfair competition through the offering of these novelties by others under other names than those given to them by the originators or introducers.

"Resolved, That the Secretary of the League be instructed to take up this subject with The American Seed Trade Association, with a view to having said Association pass suitable resolutions at the next annual meeting in June, to the effect that every new variety of seeds, either vegetable, flower or grain, that may be introduced and catalogued hereafter by an American Seedsmen should be registered under its proper name, with a full description and source of origin, with the Secretary of either The Wholesale Seedsmen's League or The American Seed Trade Association, as may be decided upon after conference of Committees to be appointed by the Presidents of the two organizations, said Joint Committee being authorized to fix the amount of the nominal charge to be made to cover cost of such registration and attendant expenses. It is recommended that either said Joint Committee, or a Special Committee, be made a Standing Committee to consider all questions in dispute as to the naming of varieties, and if impossible to adjust same amicably between the disputants, to submit reports to the Board of Directors of both organizations.

"Resolved, That copies of these resolutions be sent to each member of The Wholesale Seedsmen's League, and that a sufficient number of copies be sent to the Secretary of The American Seed Trade Association for mailing to each member thereof.

"Such distribution of copies of these resolutions to be accompanied by an explanation from the Secretary that we seek the co-operation of all honorable houses, in the interests of all, in an earnest endeavor to fix firmly the usages of the American Seed Trade upon the highest plane of business ethics."

The Secretary was instructed to mail a copy of this action to all members of the League, and to other Seedsmen in close affiliation.

BURNET LANDRETH,
Secretary of the League.

RALPH M. WARD & COMPANY
12 West Broadway - - NEW YORK

BY WIRELESS FROM ROBERT CRAIG.

Mr. Craig would like to call special attention of the readers of HORTICULTURE to a few nice things in the plant line—some comparatively new, others not—which he can assure them are well deserving of general cultivation for commercial purposes. Phyllanthus nivosus, for instance, sometimes called the Snow-Bush, with its graceful sprays of white and green mottled foliage; what more striking combination can be imagined than this in association with poinsettias at holiday time? It is even more effective than its tri-colored variety rosea-picta, which is occasionally seen in a private conservatory. There is certainly a place for this subject either in plant form or cut, and it is also useful for summer bedding. It roots badly from cuttings but may be propagated readily from roots in the same manner as with bouvardias. Another desirable plant for the trade is Ficus Chauvieri. An old plant but still scarce. Its foliage is thick and more leathery even than pandurata, and it excels that popular novelty in its beautiful venation, resembling a framework of white ivory. People are beginning to recognize the beauty of veins and thorns. Taste in this direction hasn't been cultivated as it should. Ficus pandurata keeps best when potted, with a good mass of roots.

Dracaena Massangeana is far superior to Lindenii. The latter has the white variegation on the edge of the foliage and consequently its leaves are apt to decay, but Massangeana has the variegation in the centre and its solid green edge is an advantage. It makes an admirable hotel plant when it attains a height of from three to

four feet. Fritz Dressel, who is the best dracaena grower in the country, grows 2500 Massangeanas every year and sells them at \$2.00 apiece. He does this by keeping a permanent bed of stock plants and has done so for twelve years. Otherwise, as by importing little plants from Europe, it would be quite expensive to go into. Among the red-foliaged dracaenas, the new Mandaiana looms up as future leader. This is a cross between D. Youngii and terminalis; it gets its bright color from the latter and its sturdy growth from the former. Rose Tausendschon is likely to take a high place on and after the coming Easter. Crimson Rambler valuable as it has been, is on the wane, and people are looking for pink, now. Among the hybrid perennials Magna Charta still remains the best for Easter forcing. More than any other variety it can be controlled and brought in just when wanted to a day.

Bear in mind when planning for holiday stock for next season that Begonia Agathe compacta is very compact and floriferous and better for use as small plants in hampers than the popular Lorraine. It has been established beyond doubt that Lonsdale's variety (light-pink Lorraine) stands the best of all the Lorraines under store or dwelling house conditions.

By breeding for early bloom cyclamens with great masses of flowers may be had for Christmas. Each grower should select his seed with this in view. Think of cyclamens with forty open flowers on them! The people will take every one that is offered at Christmas. A good addition to the Christmas azaleas is Princess Victoria. It is a soft, pure pink, and very compact and floriferous. In the red-flowered Christmas azaleas Apollo Schultz takes the lead. It is a better flower and a better color than the old Apollo, being a vermilion scarlet.

Last Christmas we noticed that the brighter the color was the better it suited the buyers. Aucuba and ardisia are still the best of the bright-berried plants. Aucubas will retain their berries and foliage in any room and don't seem to object to any temperature, hot or cold. A light top-dressing of blood, say two months before Christmas, makes dark green foliage and increased color in fruit. A light application is better than a heavy one. Too heavy a dressing is liable to cause the foliage to drop. For palms, ferns, ficuses and all such things this

is beneficial; you can see the effect in ten days.

Marantas, as a rule, are unsatisfactory plants for florists' use, but the pretty little rosea lineata is all right and will keep well in mixed baskets, hampers, etc.

We are waiting for Rhododendron Pink Pearl to get cheaper. It will be a great acquisition to the forcing list as soon as the price gets within our reach.

ORCHIDS

If you contemplate investing money in Orchids this season we respectfully solicit your orders. Our stock is larger and finer than ever before and the prices are the lowest consistent with good stock. **WE HANDLE ORCHIDS EXCLUSIVELY**, and are in a position to furnish these cheaper and better than anyone else in the business.

Great quantities of *Cattleya Mossiæ* are now in sheath. *C. Gaskelliana* and *C. gigas* are making splendid flowering shoots to bloom this season. **The first crop of flowers will pay you for the plants.**

If you are looking for other things we have them, such as *Cypripediums*, *Dendrobiums*, *Oncidium*s, *Vandas*, etc., etc.; also choice and rare plants in great numbers at low prices, of imported stock. **Vanda coerulea has just arrived.** Central and So. American plants will commence to arrive after all risk of frost is over, or from beginning of May.

We have imported and shipped Orchids for the last twelve years and we believe we know something about the business. If the plants arrive in poor shape you would never get them for we would not give you cause for complaint.

We also have on hand supplies such as fine Orchid-peat, Live Sphagnum Moss, Leaf Soil, Hand-Made Orchid Baskets, Books on Orchids, etc. Before ordering write us for prices.

Of Interest to Retail Florists

Orchids and gardenias continue in the ascendancy with the prospect of a long run.

One of the hustling florists of the State of Pennsylvania is John A. Kepner of Harrisburg, who, besides a large range of greenhouses, runs three retail flower stores.

The improvement in flower production, the development of taste, the changes in fashions, the exigencies of competition, all affect the prosperity and have a vital bearing upon the business of the florist. His success will go forward or backward in direct proportion to his foresight and grasp of the situation as conditions shift and new problems come up from day to day. In no line of business is it more unqualifiedly true than in the florist business that "to stand still is to go backward."

A marked change in the fashion of corsage bouquets has manifested itself within the past three years. The single or California violet is striving hard for the mastery, and while the old favorite, Marie Louise, is doomed to bend the knee to her more graceful sister, it is also true that neither is finding favor for outdoor use. The over-production of the double variety made it a too common commodity, bringing the flowers within the reach of masses and much to the disturbance of the classes.

Never have the requirements as to character, ability and refined manners in the florists' store clerk been so exacting as now. The demand for young men possessing these qualifications has been and is far in excess of the supply. More than half the flower stores of the fashionable sections of the large cities have room for the ideal salesman,—one who can attract and develop business by his knowledge, industry, address and artistic ability—and for such the question of salary is easily settled.

"Follow your leader" is CHICAGO the custom here. Some time ago a prominent down-town florist began advertising in the daily paper, now several stores advertise special sales for Saturday. It seems to pay as we notice that large lots of stock are bought and disposed of by these firms. A West Side florist who uses his window to display features of holidays and other special events from time to time, "did himself proud" this season on the occasions of Washington's birthday and St. Valentine's day. This is a kind of advertising that always pays.

PERSONAL.

Visitors in Chicago: Hugo Will and R. A. Latham, of Minneapolis, Minn.

Mr. and Mrs. Philip Breitmeyer of Detroit are enjoying a short trip to Florida.

Bernard Kelly has severed his connection with the Hobart Greenhouses, Bridgewater, Mass.

The 70th birthday of William K. Harris, the veteran Philadelphia plantsman, was appropriately celebrated by a dinner at the Cafe Peran on the 10th inst. The affair was informal but gave many of his old friends an opportunity to offer congratulations.

John Hayes, of the Munn Estate, Orange, N. J., met with an accident last Friday, his head coming in contact with the iron rod of the ventilator, to the damage of his head. While not able to be out, yet in last accounts he was doing as well as could be expected.

Visitors in Boston: Frank L. Moore & Son, Chatham, N. J., Mr. and Mrs. C. H. Emerson, Newmarket, N. H., Jas. McHutchison and C. B. Knickman, New York, Albert Pochelon of L. Bemb Floral Co., Detroit. Charles Schwake, New York, Wm. Jurgens, Newport, R. I., J. N. Champion, New Haven, Conn.

NEWS NOTES.

Mrs. C. H. Foreman, Louisiana, Mo., will carry on her late husband's business.

Chas. Morton, manager of the Redondo Floral Co. at Los Angeles, Calif., was previously located in Chicago.

Plant auction sales will commence in Boston on March 31, when N. F. McCarthy will open the spring campaign with a big consignment of trees and hardy shrubbery, at his salesrooms, 84 Hawley street.

Carnation Claribel, to be disseminated in 1910 by the Wellsville Cut Flower Company, is described as a fiery scarlet overlaid with a velvety crimson sheen. It is the result of a cross between Estelle and Maceo and is in its prime at Christmas.

Mr. H. Suzuki, who is exceptionally well-informed on lily culture, says that bulbs grown in cool countries, while they make a denser crown and shorter stem, continue longer in good health

than those from warmer climates. The latter cannot be relied on to be free from the encroachment of disease for more than ten years.

It is rumored that an association of New York growers—the prime movers of which are some carnation men of Long Island—is projected with the intention of marketing their own products. A meeting, to be held in New York city this week, has been called, and rose and violet growers have been invited to attend also.

THE FLORISTS' SUPPLY HOUSE OF AMERICA

Without a rival in knowledge of the requirements of the trade and the ability to supply them. Our New Illustrated Catalogue, recognized as a work of art unprecedented in its line for variety, novelty and completeness, tells the story fully, and if you have not yet sent for it, do so now.

'TIS FREE TO EVERYBODY IN THE TRADE

H. BAYERSDORFER & CO., 1129 Arch St., Philadelphia, Pa.

FLOWER MARKET REPORTS

The general outlook in **BOSTON** the flower trade has not changed, and there is little prospect that it will until Easter. Relief from the heavy production and local stagnation is hoped for by that time, at least. It is a common saying that there is nothing one can ask for that cannot be supplied, yet we saw one party chasing in all directions today for a bunch of yellow antirrhinums and he did not find them, although this market is better supplied with "odds and ends" than any other. Anemones, ranunculuses, antirrhinums, coreopsis, calendulas, schizanthus, Liliun speciosum rubrum, etc., are all in evidence at present time.

Stock of all kinds was **BUFFALO** rather plentiful the past week, especially carnations, which filled up the coolers to overflowing, and while fair prices have been holding on, the market could stand the strain no longer, and on Friday and Saturday bargain signs were seen galore among the retailers. It was a genuine bargain day for the public and helped to clean up a little surplus at the wholesalers. Tea roses and Beauties are in good supply, as well as lily of the valley, gardenias, violets, peas and all bulbous stock and lilies, which need some force to move.

Business for the past **CHICAGO** week was fairly good with the wholesalers. Although prices were very low a great quantity of stock was handled. At no time during the season have New York violets been here in greater quantity, but they were sold, and although at figures as low as twenty cents per hundred, yet one could not but wonder where they all went to. Carnations are about in the same predicament at this time. Quantities of southern jonquils are being shipped here, depreciating the price of home-grown flowers. Lilies are more plentiful, also smilax. Hardy ferns are beginning to show the effects of long storage, but it is not expected that they will reach the prices of a year ago, when they brought \$6.00 per thousand. American Beauties are still scarce, but a crop is on the way for Easter.

With a seemingly un-**DETROIT** limited supply of carnations and bulbous flowers the bottom has dropped out of the heretofore healthy market conditions. Azaleas, rhododendrons and lilac plants are used a great deal for large floral design work while wreaths of assorted bulbous flowers not only provide for an agreeable change but give the florist an opportunity to create very artistic effects.

A lessening of the de-**NEW YORK** mand for cut flowers is more apparent this week, but as a consequence of the continued dull condition which has prevailed throughout the season it has not been attended by the general depression of prices usual when the Lenten season sets in. Roses grow more

plentiful and the call for them is anything but urgent and prices are gradually weakening; Beauties particularly move slowly, the price now being about half and less than the quotations of three weeks ago. Carnations hold their own and the heavy cut shows some signs of diminishing for a time at least. They have been so cheap that it does not seem that they can suffer a further decline. Violets, with few exceptions, can be disposed of only to the street pedlers. All bulbous stock is in greater supply than the demand can take care of at—for the grower—living prices. Some southern bulb stock has already made its appearance. The supply of green stuff is about equal with the demand.

American Beauty **PHILADELPHIA** roses are more plentiful this week and prices have dropped a little. Richmond and Liberty have improved in quality with larger receipts and a sagging in quotations. Some improvement in Killarney is noticeable in spots and there is no doubt of its increasing popularity over Bridesmaid. The carnation market is still very much overcrowded. Cattleyas are good with sufficient supply. Cypripediums are plentiful but demand meagre. The violet situation is tolerable. Violets seem more affected by the weather than any other crop when it comes to distribution. Lily of the valley is still in poor demand. Very little change to report on other staples, except that supplies have slackened up a little. Gardenias are fairly plentiful. The greens mark it is not quite so good as it has been.

The Twin Cities **TWIN CITIES** report that business is keeping up good. Violets and bulbous stock are still plenty, while roses are in short supply. Carnations went up some this last week.

The Lenten season **WASHINGTON** is upon us, as is also a glutted market. All flowers of fine quality are in abundance, but good green still remains very scarce and high accordingly. The weather still continues unsettled and unfavorable to the sellers.

TOLEDO NOTES.

Business here has been rather quiet of late, perhaps more on account of the exceptional cold weather, and also the river flood and ice gorge. J. Fischer's boiler room was two feet under water for several days, and one hour with carnations planted in solid beds had enough water in to flood the carnations 18 inches. Fortunately the weather was warm enough to prevent the frost from getting into the houses. We all feel very sorry for Mr. Fischer and hope that his loss will not be too great.

O. B. Wisner closed his city store on March 6th and will give his entire attention to his store connected with his greenhouses.

A DAILY PLANT AUCTION.

As announced in our advertising columns, The Fruit Auction Company of New York is about to inaugurate a series of daily auction sales of plants and other horticultural material open exclusively to the trade. This innovation will be watched with great interest and, if it meets with general support, will vitally affect the wholesale plant trade of the metropoljls. Our old friend J. P. Cleary will wield the hammer and no doubt will have a large gathering of the craft in attendance when he makes his opening address.

The Virginian crop of bulb flowers is well advanced and should we be favored with a few warm days shipping will commence about the 25th. As a larger quantity than usual were planted last fall heavy consignments may be expected this season.

SOLUBLE FERTILIZERS.

I have read Mr. Pray's articles with a good deal of pleasure and some profit. As to the use of soluble fertilizers, the quantity to be used and the conditions under which they are used and the result to be gained is of more moment than fineness or percentage. The percentage is to be considered of first importance from a freight and cost point, but not always from that of application.

Where immediate results are required, we are glad we have our double sulphates, phosphates and nitrates. Yet how often have I wished that nitrate of soda and potash were less soluble and glad to use less soluble phosphatic and potassic fertilizers. I know scores of cases where ten times more damage has been done by injudicious applications than good obtained. Therefore when Dr. Galloway advises going slow he is giving good advice.

The quantities to be used must be left to each individual case, because the user will be in possession of facts as to origin and nature of soil, its previous and recent treatment, as well as the methods of watering and the kind of water used.

The fineness must be according to the kind of fertilizer used whether mixed or simple. Most of the mixed kinds are compounded to give the best results, or should be, for a general application in a general way. This leaves it to the grower to use simple kinds for special and immediate results. By this means he has the double advantage of prolonging the feeding of the crop or plants by mixing with his compost of soil and organic matter such complete or simple fertilizer as will give the necessary potash, phosphoric acid and nitrogen, as the crop or soil need, and further to give such future applications as will assure a continuance of perfect feeding.

Further he may get immediate results by using nitrate of soda, sulphate of ammonia, sulphate of potash and superphosphate in their proper but small proportions. Fineness does not affect any of the latter as they are chemical compounds and not mechanical mixtures and are readily dissolved and diffused throughout the soil. The best method of application is in solution and so weak that the user may almost believe that he is not giving any fertilizer to his plants at all. But if used as a surface dressing, pounding up of the nitrate of soda or running it through a corn mill will make it fine enough for that purpose.

GEO. A. BISHOP.

CATALOGUES RECEIVED.

J. F. Rosenfeld, West Point, Neb.—Wholesale Price of Peonies for Fall, 1908.

Wilfrid Wheeler, Concord, Mass.—Catalogue of Small Fruit Plants, Asparagus Roots, and other stock.

Leesley Bros., Chicago, Ill.—Wholesale Nursery Catalogue for 1908. Ornamental Trees and Shrubs in choice variety are listed.

Leedle Floral Company, Springfield, O.—Roses, "summer grown and winter rested, on own roots." Kaiserin Goldfolia is listed as a novelty.

Andorra Nurseries, Chestnut Hill, Phila., Pa.—Price List of Specimen Trees, Shrubs, Roses and Fruit, Spring, 1908. A very complete list of ornamental nursery stock.

T. C. Thurlow, Cherry Hill Nurseries, West Newbury, Mass.—Fall of 1907 and Spring of 1908 Wholesale Catalogue. Fine evergreens and ornamental trees for immediate effect.

Elm City Nursery Co., New Haven, Conn.—1908 Price List of Ornamental Trees and Shrubs, Hardy Herbaceous Plants, etc. Hydrangea arborescens grandiflora is included in the novelties offered.

Hoopes, Bro. & Thomas Company, Maple Avenue Nurseries, West Chester, Pa.—Select List of Choice Fruits and Ornamentals. Viburnum plicatum makes an effective title cover illustration, and on the back cover is shown a view of the office of the nurseries, all in Quaker gray tints. The book is the product of the J. Horace McFarland Company, who make catalogues in the same perfection that this old-established nursery firm makes the goods catalogued, so there you are.

PUBLICATIONS RECEIVED.

Part II. of the Twentieth Annual Report of the Rhode Island Agricultural Experiment Station is a volume of over 400 pages and contains much valuable information for the market gardener and small-fruit grower. There are many full page illustrations. Tests with lawn grasses and experiments with strawberry crosses are especially interesting. A good index adds to the value of the book.

Bulletin No. 32, of the Bureau of Biological Survey, U. S. Department of Agriculture, is devoted to a very thorough report of the Food Habits of the Grosbeaks, by W. L. McAtee. Three colored plates and numerous engrav-

ings illustrate the text. It is gratifying to learn that these beautifully plumaged birds consume an apparently insignificant amount of fruit and grain as compared with their services in the devouring of weed seeds and destructive insects and are proven to be of great economic value to the farmer.

Proceedings of the Congress of Horticulture, Jamestown Exposition, September 23, 1907. This volume gives a synopsis of the meetings and the papers in full which were presented at the sessions at Norfolk. The papers on horticultural conditions and progress in various sections of the country are especially worth reading. The price of the book, 108 pages, bound in cloth, is 25 cents, and copies may be had on application to H. C. Irish, Secretary, Mo. Botanical Garden, St. Louis, Mo.

VALUE OF THE CURVED EAVE

In the first place, every bench whether it be on the side or in the middle, receives an equal amount of light. In the short winter days, there is no band of shade cast by a gutter at the eave. There being no obstruction to the snow, the roof clears itself. Aside from these tremendous advantages, think of the increased light throughout the entire house because of the absence of heavy supporting members and the use of 24 in. wide glass. Then there is the looks. Send for the catalog

HARDY ROSES FOR THE GARDEN

Strong Field-grown Plants

The roses here offered are extra strong two-year-old field-grown blooming plants, which if planted early, will give a large number of flowers the first year. They can be planted as early in the spring as the frost is out of the ground, and from that time until about the first week in May. We offer a grand collection of the best and choicest varieties, as follows:

HYBRID PERPETUAL OR JUNE ROSES

Frau Karl Druschki, Marchioness of Londonderry, Capt. Hayward, Mrs. R. G. Sharman-Crawford, Ulrich Brunner, Margaret Dickson, Baron de Bonstetten, Paul Neyron, Gen. Jacqueminot, Magna Charta, Mrs. John Laing, Mme. Gabrielle Luizet, Marshall P. Wilder, Gloire de Paris, Baroness de Rothschild, Prince Camille de Rohan, Fisher Holmes, Alfred Colomb, Soleil d'Or, Persian Yellow, Moss Roses, Rugosa alba and rubra, etc.

MONTHLY AND HYBRID TEA ROSES

Etoile de France, Killarney, Mme. Abel Chatenay, Countess of Gosford, Koenigen Carola, Perle von Godesberg, Gruss an Teplitz, Maman Cochet, White Maman Cochet, Belle Siebrecht, Hermosa, Mme. Caroline Testout, Souv. de Pres. Carnot, Kaiserin Augusta Victoria, American Beauty, La France, Clothilde Soupert, Prince de Bulgarie, Mme. Norbert Levavasseur (Baby Rambler), Anny Muller (Pink Baby Rambler), Catherine Ziemet (White Baby Rambler), etc.

In Climbing Roses we have a nice stock of Crimson Rambler, Lady Gay, Dorothy Perkins, Dawson, Gardenia, Tausendschon, etc.

LET US KNOW THE QUANTITY YOU WANT AND VARIETIES, AND WE WILL BE GLAD TO QUOTE LOWEST PRICES ON SAME BY RETURN MAIL.

F. R. PIERSON CO., Tarrytown-on-Hudson, New York

ROSES THAT BLOOM

from June until November

MY catalogue describes a list of the best everblooming summer garden Roses in the hardiest varieties and widest range of colors. These are the hybrid tea Roses, which are becoming more popular each year. Their everblooming qualities strongly recommend them to all who grow Roses in their gardens.

The beautiful new pink H. P., Dr. Wm. Gordon; The far-famed Queen of Spain; the new French H. T., The Lyon, an improved Soleil d'Or. The glorified Killarney, Betty, and all the leading new and old varieties; all the best varieties in Hybrid Perpetuals, Rugosas, and Penzance Sweetbriars, in strong, field-grown, dormant plants of first quality stock.

The new English Yellow Rambler, Goldfinch, the deepest colored in its class; also the American race of Ramblers, including that grand rose, Hiawatha, and its companions; Delight, Coquina and Paradise. Double Hollyhocks in sixteen assorted colors; Herbaceous Phlox and Peonies in best varieties.

My catalogue, which tells one how to grow roses, mailed on application.

Notice to Florists

THE FRUIT AUCTION COMPANY, New York City, beginning this Spring, will inaugurate **daily auction sales at wholesale of plants, etc.**

Exceptional facilities provided in our new building, centrally located at 200, 202 and 204 Franklin Street (corner Washington Street).

Date of initial sale, **Wednesday, April 1, 1908**, at eight o'clock in the morning.

Sales daily thereafter at same hour until further notice.

For terms and all other detailed information, address:—

THE FRUIT AUCTION CO.,

P. O. Box 640 - - NEW YORK CITY

Correspondence and personal interviews cordially invited. *Payments will be made to sellers of plants the day following sale.* The movement to sell plants by auction at wholesale has the support and commendation of leading growers and importers.

The Burpee Quality in Seeds for Florists and Market Gardeners.

We have on our books the names of the leading florists and market gardeners and it is gratifying to note that our trade with these branches of the trade is constantly increasing; showing that the Burpee policy of supplying only the "Best Seeds that can be grown" is being more and more appreciated. Those who have not already received our "Blue List" of wholesale prices for market gardeners and florists should write for same at once.

Burpee's "Full Pound" Dollar Box of Sweet Peas for 1908

This New Dollar Box contains one full ounce package each of the following superb new varieties: **Queen Alexandra**, the new fadeless scarlet, **Bolton's Pink**, a superb new, rich pink, — **Agnes Eckford**, a lovely shade of soft pink, — **Horace Wright**, Eckford's new bluish maroon, and **Dobbie's Mrs. Collier**, the beautiful new primrose.

Also one full ounce package of **Prince of Wales** and each of the ten true and tried standard Sweet Peas contained in Burpee's "Bountiful" Collection advertised on page 170.

These ten are: **Burpee's Aurora**, — **Burpee's Dainty**, — **Countess Cadogan**, — **David R. Williamson**, — **Dorothy Eckford**, — **Flora Norton**, — **Ja et Scott**, — **King Edward VII** — **Othello**, and the unequalled special new **Burpee's Best Mixed** for 1908.

The pages referred to are those of **The Farm Annual for 1908**.

At regular prices "per oz." these amount to \$2.80 but all sixteen ounce packages, neatly boxed, — with "How to Grow Sweet Peas," rewritten for 1908, — will be mailed to any address in the United States upon receipt of ONE DOLLAR.

Burpee's New Pink
JANET SCOTT, —
from a photograph

Burpee's New Collection of Nasturtiums

For 25 Cents

We will mail one full size packet each of the wonderful **New Variegated Queen**, — the first of **Burpee's New "Royal Race" of Variegated-Leaved Tall Nasturtiums**, described on page 106, — the **New Blend of Burpee's Brilliant Beauties in Tom Thumb Nasturtiums**, as described on page 115, — **Burpee's New Giant-flowered Tall Nasturtiums**, as described and illustrated on page 116, — the remarkable new complete mixture of **Burpee's Tall Ivy-Leaved**, illustrated and described on page 116 — **Dwarf Lilliput Mixed**, described on page 130, — and **Burpee's "Crazy-Quilt" Bush**, a special mixture of all dwarf varieties including the wondrously beautiful new **Bush Ivy-Leaved**.

Purchased separately these six packets would cost 55 cents.

In every instance the pages referred to are those of **THE FARM ANNUAL FOR 1908**.

See pages 96 to 99 of this catalog, where all desirable varieties of Sweet Peas are offered — the best of both old and new. We are "headquarters on Sweet Peas."

WHOLESALE

We offer any of the quick-selling, popular 25-cent collections at \$2.00 per dozen by mail, postpaid, or \$1.80 per dozen when sent by freight or express. For the "Dollar Boxes" we charge 75 cents each by freight or express, at purchaser's expense for transportation charges.

A Plant of **KOCHIA TRICOPHYLLA**.

Burpee's GEM COLLECTION of Annuals

Eight Packets Beautiful Flowers For 25 Cts.

We will mail one packet each of the following: — **Fuchsia-Floored Ipomoea**, the rapid growing and most gracefully attractive new climber — **Burpee's "Magnificent" Celosia** of remarkably brilliant color — **Dwarf French Marigold**, "Striped Perfection," lovely colors, perfectly double — **The Burpee Blend of New Giant-lowered Pansies**, — as in packet list.

The four named above are worthy a place in the garden. The collection contains also ten, one packet each: — **Little Gem Sweet Alyssum**, described on page 117 — **For hook Favorite Asters**, as described on page 117 — **Kochia Tricophylla**, described on page 117 — and **Burpee's hardworking Long-stemmed Phlox Drummondii** as described on page 140 of **The Farm Annual for 1908**.

Purchased separately these eight packets would cost 80 cts., but all are mailed for only 25 cts.: Five Collections for \$1.00.

BURPEE'S SEEDS GROW and are famous for the Uniform Excellence of their Products.

Wholesale. We offer any of the quick-selling popular 25-cent collections at \$2.00 per dozen by mail, postpaid, or \$1.80 per dozen when sent by freight or express. For "Dollar Boxes" we charge 75 cents each by freight or express, at purchaser's expense for transportation charges.

Burpee's Farm Annual for 1908.

Our complete Retail Catalog has been already mailed. If YOU have failed to receive it, kindly write at once, and a duplicate copy will be forwarded.

Growers N. 5th Street,

British Rose Culture

THE NATIONAL SOCIETY

In spite of the increased attention which is being paid in Britain to the carnation and sweet pea—fostered by their special societies—the cult of the rose has made no decline. It is only fitting that the great national emblem, and the flower which has played an important part in British history should still hold its own against all rivals. In recent years the increased observance of St. George's day by wearing a rose has given a further impetus to the demands made upon the trade growers. The work of the National Rose Society has also borne good results. By the holding of first-class shows, and disseminating practical information for the use of rosarians, a vast amount of useful work has been accomplished. The Society was founded in 1876, at a meeting of enthusiasts presided over by the late Dean Hole, whose famous book on roses is a standard work on that subject. For 28 years Dean Hole rendered sterling service as the president, and his death was an irreparable blow to the Society. The actual founder of the Society was the late Rev. H. Honeywood D'Ombraih, who from 1876 to 1902 discharged the duties of senior honorary secretary. His contributions to the horticultural press, under the title of D. Deal, were read by numerous admirers for over half a century. The memory of these noted horticultural clerics is being perpetuated by The National Rose Society. A Dean Hole medal has been established by public subscription, and a D'Ombraih cup. American readers will be interested to know that the last year those silver cups were presented by Mr. W. E. Nickerson, of Cambridge, Massachusetts, U. S. A., who has promised to give twelve more silver cups for the raisers of specially good roses for ordinary garden purposes which will be awarded by the committee during the course of the ensuing year.

A GOOD RECORD

The National Rose Society continues to increase in popular favor. During last year 597 new members have joined, this being a greater number than in any previous year. This brings up the total number of members to 2,481. In 1902 the membership totalled 890. The Society has arranged a very attractive program for this year. In July the Metropolitan exhibition will be held at the Royal Botanic Gardens, Regents Park. The provincial show will take place at Manchester on Tuesday, July 24th, in the grounds of the Royal Botanical and Horticultural Society of Manchester. Arrangements have also been made with the Royal Horticultural Society to hold an autumn show in the Society's hall in London. The Society is issuing a new work on "Enemies of the Rose," and a new edition of the "Rose Annual," which has met with so much favor amongst the members.

The other publications issued to members are a "Handbook on Pruning Roses," a new "Official Cata-

logue" of the leading varieties, a revised edition of "Hints on Planting Roses," and a "Report on the Constitution of Rose Soils." It will thus be seen that the Society is continuing the educational part which has always been a prominent feature of its work. One great factor which has distinguished the Society is the united efforts made by both the trade and amateur sections to further its interests. The leading trade growers have always been ready to contribute their finest specimens to add to the attractiveness of the shows. The prizes given for new seedlings have generally aroused a keen competition amongst the raisers, besides enabling the amateurs to see novelties which are worthy attention. Financially the Society is also sound. At the annual meeting the balance was reported to be £291. 9s. 1d. the receipts for the year having amounted to £2,244. 7s. 3d.

NEW ROSES

At the National Society's summer show a gold medal was awarded to two new roses—Queen of Spain and Lady Helen Vincent. The former is a pale flesh-colored H. T. variety, shown by Messrs. S. Bide and Sons, of Farnham, Surrey. Lady Helen Vincent is also a new H. T. of a delicate pink tint. The central petals form a pointed cone, but the outer ones droop and expand. This was raised by Messrs. Alex. Dickson & Sons, Newtownards, Ireland, who also received an award of merit from the Royal Horticultural Society. Three other new roses from this firm were also given an award of merit by the Society. These were Souvenir of Stella Gray, Mrs. Munt, and Mrs. Harold Brocklebank. The first named is a Tea variety with graceful buds of a soft yellow shade. When open the petals assume a ruddy bronze tint. Mrs. Munt is a creamy-white H. T. variety of shapely form. The petals expand fully from the centre, and their edges are rolled backwards. Mrs. Harold Brocklebank is another addition to the list of H. T.'s. It is similar in color to Mrs. Munt but different in shape. It somewhat resembles the Duchess of Portland, another of Messrs. Dickson's gold medal winners. An award of merit has also been obtained by Joseph Lowe, a H. T. variety of a rosy-pink tint, stated to be a sport from Mrs. W. J. Grant. The well formed blooms have conical centres. This was shown by Messrs. Lowe and Shawyer, of Uxbridge. Goldfinch is a new Rambler, with terminal corymbs of semi-double flowers which are of a coppery yellow shade developing to rich creamy white in the older flowers. This has emanated from Messrs. Paul & Son, Old Nurseries, Cheshunt, who also received a card of commendation from the National Rose Society.

OTHER MERITORIOUS VARIETIES

Mrs. Henry Weller (raised by Mr. H. Weller, Leatherhead, Surrey) is a decorative garden rose, resembling Killarney. The blooms are of a deep rosy carmine tint. The parentage was stated to be Mme.

Abel Chatenay and Mrs. W. J. Grant. Messrs. W. Paul & Son, of Waltham Cross, secured an award of merit for Hugo Roller. This is a new decorative H. T. The outer petals are bright deep crimson, whilst the pointed full centre is of a soft creamy yellow. Phyllis is the name of a new Baby Rambler sent out by Messrs. H. Merryweather and Sons, Ltd., of Southwell. It grows outside to a height of about two feet, in a very bushy form, with a branching habit, producing long, feathery panicles of flowers in constant succession. The color is a bright carmine-pink, shading lighter in the centre. As indicating roses in favor the following is a list of the "best 18 new roses" which a nurseryman is offering: Betty, after the style of Killarney; Charles J. Grahame, a bright scarlet crimson H. T.; Countess of Derby, a robust growing exhibition rose (H. T.); Geo. Laing Paul, a promising crimson H. T.; Hiawatha, a popular climbing Polyantha; J. B. Clark, a useful exhibition rose of a deep scarlet, shaded blackish crimson; Lady Ashton, a H. T. of vigorous growth; Madame Constant Soupert, an exhibition tea; Mons. J. Hill, a finely colored exhibition rose; Queen of Spain, described in a previous note; Richmond, a good bedding variety; Lady Rossmore, Mme. P. Rivoire, Mrs. G. W. Kershaw, Rosalind Orr, Sour. de Maria de Zayas, H. T.'s; M. H. Walsh, H. P., and Phyllis, a Polyantha.

W. J. H. Adsett,

Large Rose Houses

Though it sounds like treason to say anything against large glass houses, practical growers are not all in accord with the builders of this class of structure. A span-roofed house 50 feet wide and some hundreds of feet long must of necessity be high at the ridge, and when to this are added low, solid beds instead of the old-time benches, 3 feet or more in height, the young roses, when planted, are a long way from the glass, and do not start as freely as under the older system. Whether this late start is made up for by the use of grafted stock and ease of working wide houses remains to be seen, but more than one large grower, once partly converted to the large house theory, will, in the proposed additions this year, return to the more moderate size. Leaving the question of height, extreme length has its disadvantages independently of the difficulty of handling stock. In a rose-house known to the writer, 800 feet long, there is one part where, directly air is put on, a kind of independent circuit is set up, and it is easy to see by the behavior of the plants there that they do not relish the conditions. Green fly and mildew always attack at this point, and it is thus a kind of safety valve for the section men. In a house of moderate length these independent currents are broken up by partitions or otherwise, and, though this idea may seem far-fetched, there is more in it than at first appears.—Amer. notes in *Gardeners' Chronicle*, London.

The question of large versus small houses, as it presents itself to us, is one which will have to be settled in the dear school of experience. The subject has of course two separate phases, first, the cost of construction and maintenance of large as compared with small houses, and second, the question as to which is capable of producing the higher grade of flowers. The first, we believe, is generally conceded in favor of large houses by those

who have considered the matter at all. The second is evidently the point which is giving the critic in the above notes some cause for worryment.

His complaints resolve themselves into two divisions; dangerous draughts owing to extreme length and width, and lack of light, on account of the distance of the plants from the glass. If a house 40 feet wide and 700 feet long may be considered large, we can say, as far as our experience goes, that the fears of our critic are not well founded in either case. In this structure the temperature and ventilation, both day and night, are under more perfect control than any other house on the place, and we are firmly convinced that, in this respect at least, it is very much superior to the eight small houses which it would require to cover the same amount of ground.

The point in regard to light we think we have settled, for this house at any rate. Ordinarily the test for this would be by close observation of the plants at the varying distances from the glass. Applying this rule we must say that, so far, it would take a considerable stretch of the imagination to discover any difference in the plants, which could be attributed to lack of light caused by distance from the glass. But we have also used another method. It consists briefly in the determination of the varying intensity of light by a chemical method and we have been assured that it is extremely sensitive and absolutely accurate. Carefully applying this test we have been able to find no difference between light 5 feet from the glass and 25 feet. There may be a point at which some difference will be found, but some one will have to seek for it in a house considerably wider than 40 feet.

If the time ever comes when, in place of the whims and fancies of weak and mortal man, we have exact scientific methods for solving the complex problems of the adaptability of glass structures to plant growth, then and not until then, will the perfect greenhouse be produced.

Alex. Montgomery, Jr.

Soluble Fertilizers

The writer is pleased that Mr. Bishop has derived profit from the remarks on fertilizers, is glad to note his letter of the 14th in *HORTICULTURE* and wishes to say a word.

Mr. Bishop has wished that soluble fertilizers were less so on account of their immediate activity. Like the Jap. "We inquire to know" if he has considered whether or not less of a soluble fertilizer may not sometimes be better and easier to control than more of a less soluble one.

He speaks of damage done by "injudicious application of these quick-acting agents." It has been our fate to note the same of about every kind of plant food under the sun, but we admit at once that it is easier to over-feed with something that is one hundred times as strong as some other and, to the user, better known food. We opine, however, had the user less scorn for the chemical composition as compared to something well-known to

him the results would have been happier all around.

When one says that a quarter of a pound of nitrate of soda to the barrel of water is a real feed, no one is very much startled but when, as is often the case, it can be shown that this is much stronger than, for example, the manure water as used in that particular establishment, then the great importance of known composition can be at once appreciated.

The writer never meant to convey the impression that Dr. Galloway's advice was not good especially to those who go it blind, and he knows many do travel in this way, and as a Government official, according to President Roosevelt, he mustn't say too much!

The very fact that Dr. Galloway used soluble fertilizers probably under carefully noted tests along with ordinary compost leads one naturally to ask how much of the feed was derived from these, what strengths were used and what were the results.

The undersigned does not remember ever putting any emphasis on the fineness of soluble materials, as common experience teaches that the finer the quicker dissolved, but he did speak at some length of fine bone and rock as examples, and does maintain that their degree of fineness makes,—well, all the difference in the world.

The writer has the honor of agreeing exactly with Mr. Bishop in regard to the preparation of fertilizing solutions and in his first article on this subject spoke of the chemical value of very dilute solutions, such as Cookson's Formula, and showed at length and by comparison how weak this formula really was when used according to its originator.

We can hardly wait for Mr. Bishop to inform us if he has ever used a solution as weak as this.

Rudley M. Bray

Berberis Thunbergii

The Japanese Barberry, ubiquitous plant that it is, nearly always seems appropriate whatever the situation, the soil, or the needs. Truly it is a most versatile plant in its adaptations to particular requirements. It is not at all hard to suit in the way of soil, flourishing in every kind and even doing well where it is scant in depth, nearly as well in such a situation as does the common barberry, *Berberis vulgaris*. It is desirable for use in the general shrubbery, combining well with the other barberries, with the wild roses such as *Rosa lucida* and *Rosa blanda* and with such plants as *Rosa rugosa*, *Spiraea Thunbergii* and *Spiraea Van Houttei*. It is extremely serviceable where a low dense hedge is desirable. In fact for a hedge of such a nature it seems to be the very best plant that we have. It is particularly good for introducing into wild plantations where it is well in harmony with our own native plants such as the bayberry, the sweet fern, the wild roses and the juniper. What is more, it can successfully compete with them for its existence. Then it is an ideal game cover for it not only furnishes shelter but also food.

In habit it is symmetrical and graceful. When by itself it usually attains a height of three to four feet and a spread of four to five feet. Ultimately it may grow to a height of five feet. The branches, which are very

numerous, are stout, slightly pendulous towards the ends, and clothed with a reddish bark. The flowers are straw colored and rather interesting but not at all showy like those of the common barberry. The fruit which follows is bright red when mature and long-persistent. It is borne abundantly each year and is retained on the plant until late in the following spring. The leaves are small, agreeable in color in the summer, and in the autumn assume brilliant shades of orange and scarlet and remain until late.

So the plant is not particular as to soil or situation, serves many purposes well and is attractive at every season. In the winter there is the grace of habit, the red coloring of the twigs and the brilliant fruit. In the spring there is yet fruit and there are interesting flowers and fresh green leaves. In the summer there is a rich mass of living green. In the autumn there is the very showy fruit and the gorgeous coloring.

Berberis Thunbergii was described and illustrated in *Garden and Forest*, Vol. II, p. 52.

Daniel A. Clark.

Culture of Moschosma

Editor HORTICULTURE:

Answering your correspondent's query regarding the culture of *Moschosma* I would say that it is a very easily grown plant and so far as my experience goes is not bothered in the least by insects of any description or diseases. It does not like a very close, moist atmosphere which causes the thick leathery leaves to rot on the plant, and this is about the only trouble I have seen with it.

Cuttings may be rooted at any time from February to August. The late propagated stock flowers just as freely as the stock rooted earlier in the season, only the plants are not naturally so large. As an instance of the ease with which *Moschosma* can be grown into a large plant I would say that one expert cultivator of my acquaintance grew it six feet high and several feet through in one season from a February-rooted cutting. Place the cuttings in sand in an ordinary propagating house and they will root in some three weeks. Then pot up into a loamy compost and pot on the plants as they require it, using for later pottings about one-third of rotten manure in the soil. A temperature of 50 degrees nights seems to suit this plant better than a higher one so that we must assume that though the plant originally came from South Africa it most likely comes from a high elevation. Kept in such a temperature the *Moschosma* will be nicely in flower by the third week in December.

As a plant to grow for the wholesale plant trade it will not do, as the individual flowers drop too readily, but for private gardeners to grow for conservatory decoration few plants are finer in their season, and I have received several very complimentary letters from florists who found in it just what they needed for filling in design work rapidly and cheaply.

Once a year, it is HORTICULTURE'S cus-
tom to dedicate one issue in March to the
Rose and the American Rose Society,
giving promising new roses a conspic-
uous place in its columns and devoting liberal space to
cultural and other matters in which rose growers are
most deeply interested. The special rose issue for 1908
which we now present to our readers will, we trust, make
an impression fully as favorable as any of its predeces-
sors. It will be found to contain an unusual amount
of good, practical and eminently sensible advice on time-
ly rose-growing topics given by men, who, by assiduous
devotion and study, have attained to the position of
leaders in their specialty. While, as one of these writers
truly says, exact imitation of the methods which bring
success to one man rarely if ever wins out yet the
knowledge of another's experience and conclusions is
something that even the wisest can turn to good account.
The paper by Mr. Holmes and other articles which ap-
pear in this issue will be found of inestimable value if
carefully read and the information therein intelligently
applied. We would also bespeak for those enterprising
firms whose advertisements appear in this paper, the
kind consideration of our readers.

The meeting of New York carnation
growers mentioned in our news col-
umns has been the subject of much
comment and speculation in local
trade circles. We have no disposition to invade the pri-
vacy which it is understood the promoters of this under-
taking desire to maintain, so are not in a position to say
much concerning their grievances or their plans for
eliminating them. If the small returns from the sales of
their produce is the preponderant cause for the present
agitation it may be conceded that the season has given
good cause for disquietude. The disappointment is cer-
tainly a severe one and means many shattered hopes
for the producers, who are well entitled to our sym-
pathy and such help as it may be in our power to render.
But we can see little prospect of advancing the whole-
sale price of any flower market staples in a large city
already well supplied with wholesale dealers, by the in-
augurating of new systems of marketing. So far as the
commission dealer is concerned, he never was and never
can be an advocate of low prices and no argument is
needed to show that the causes of this year's dishearten-
ing experiences unfortunately lie far beyond the power
of either growers, commission men or trade journals to
control. We do not believe it is possible to obtain a
better price, all in all, for any staple product than an
industrious, well-trained commission dealer can com-
mand. But we are great believers in the power of or-
ganized effort, under wise direction, to accomplish much
general and individual good for those for whose inter-
ests they exist and, in a broad sense, to contribute
toward a higher standard of produce, a better market
and a consequently larger return for the producer.
Carnation growers, rose growers or any other specialists
having common grievances and common needs do well
to meet frequently and confer together, to watch ten-
dencies and developments from a broad view point, dis-
cuss ways and means of overcoming obstacles and im-
proving untoward conditions as they confront them from
time to time. To work with an intelligent, philanthropic
purpose, to disseminate light and to elevate and im-
prove by education is the proud mission of organization
in the march of progress.

HEARD IN THE ANTE-ROOM.

The Cherokee rose is called for. Why does not some enterprising grower take up this beautiful, always acceptable flower? There is "money in it."

Among the hybrid Mollis azaleas, now becoming so popular for winter forcing, as well as for garden use, Anthony Koster stand as the best yellow. The flowers are large, waxy and abundant and the color is very rich.

The seedling dahlias, Ruth Forbes and Newport, offered by Wm. F. Turner & Co., in our advertisement columns are said to be the first American seedling dahlias to receive a first class certificate of the Massachusetts Horticultural Society.

Azalea Julius Roehrs is listed to distance all other varieties in its class as an Eastern favorite as soon as it gets more plentiful. The color is a glowing cerise and such varieties as Dr. Moore and Vander Cruyssen are thrown completely in the shade when associated with this superb variety.

"What are six of the the best Flowering Geraniums? The following are recommended as being an excellent half dozen: Paul Crampel, Cannell's Crimson Bedder, Emile Zola, Duke of Bedford, Gertrude Pearson and Maxime Kovalevski." Thus saith Secretary W. N. Craig of the Gardeners' and Florists' Club of Boston.

It might be well, in consideration of the frequent mention of late of Clematis indivisa as a useful winter decorative material, to recall the fact that at the banquet given to the American Carnation Society in Boston in 1895 the mirrors in the dining hall were lavishly festooned with this lovely flowering vine, furnished by the late F. L. Harris from the H. H. Hunnewell conservatories at Wellesley.

Lily reports from various sources vary greatly. Some growers claim to have lost as high as 60 per cent. of their bulbs through disease, while others find no fault. Multiflorums, condemned right and left, are not lacking in friends—for instance, S. J. Renter of Westerly, R. I., who says his are the best in years. A very general complaint is that the bulbs are in many cases badly mixed as to height, foliage, freedom, size of flower, etc.

Wm. Sim, of Chiftondale, Mass., whose fame as a sweet pea grower has spread all over the continent, says that 48 degrees is just the right temperature for sweet peas under glass. If allowed to go down to 43 degrees they will drop their buds; at 45 the flowers will have green tips; 50 is too hot.

We have had occasion heretofore to tell about Mr. Sim's tomatoes and violets, in the culture of which he is equally expert. At the present time he keeps 25 violet pickers busy, the daily product being from fifteen to twenty thousand.

Anton Schultheis is happy in the possession of what he declares to be an ever blooming sport from Crimson Rambler rose. Well, may he revel in glee if this be so. It seems incredible but Mr. Schultheis has the young plants abundantly furnished with buds

on the growths of this season at the present time and he states that is their second blooming. The great advantage of a continuous bloomer to the rose forcers is that if a plant is not sold when first in bloom the crop of flowers may be cut and the plant set to growing again at once for another try, instead of requiring a year's rest as is the case with the old type of climbers.

A NEW BOOK ON THE ROSE.

[We can supply the following book, post paid, at the price listed.]

"Roses, Their History, Development and Cultivation;" by the Rev. Joseph H. Pemberton. The appearance of this new aspirant for public favor reminds us of the great activity of horticultural writers on a subject that is ever new. Of late years new books on rose growing have multiplied apace and the one now under notice will unquestionably occupy a prominent position among them. Sixteen years ago Senor Vergara, a Spanish rosarian, published his *Bibliografia de la Rosa* and the numerous additions both at home and abroad would seem to justify a new edition or a supplement to his work.

There is no need to remind our readers of Mr. Pemberton's competency to deal with the flower with which his name has so long been inseparably connected. His book from every point of view is worthy of the subject and the writer. In size it is a large octavo and runs into something over 300 pages. The illustrations comprise some full-paged lithographic plates of the parents of the various sections of this popular flower and others in the text explanatory of the various tools, appliances and operations connected with the culture of the rose.
